#### [HO. OF REPS.] 1853-54

Ex. Doc. No. 3.

FINANCES.

## REPORT

# THE SECRETARY OF THE TREASURY,

On the Finances.

DECEMBER 7, 1853.—Referred to the Committee of Ways and Means, and ordered to be printed

December 15, 1853.—Ordered, That 15,000 copies extra be printed for the use of the House

of Representatives.

TREASURY DEPARTMENT, December 6, 1853.

\$2,000 Character 558,931,865, 52

Sin: In obedience to the act supplementary to the act entitled an act to establish the Treasury Department, approved May 10, 1800, the following report is submitted:

The estimated receipts for the fiscal year ending June 30, 1853, were as follows:

From customs	\$49,000,000 00
lands	2,000,000 00
miscellaneous sources	
Balance in treasury July 1, 1852	14,632,136 37
	65,932,136 37
And the estimated expenditures	
Estimated balance July 1, 1853	5,372,079 51

This balance to exist after applying \$7,199,477 77 to the redemption of the public debt.

The actual receipts for the fiscal year ending June 30, 1853, were as follows. viz:

lands		1.657.084 99
miscellaneous sources	6° - 0 1	238,628 S9

The accompanying table C exhibits the time of redeeming and purchasing the public debt, and the amount of premium paid for it, from the 1st July, 1852, to the 3d December, 1853.

From this table it appears that \$3,342,150 was redeemed and purchased from the 1st July, 1852, to the 4th of March, 1853, and \$12,722,779 75 from the 4th of March, 1853, to the 3d December, 1853.

Within a few days after the 4th of March, 1853, it was ascertained that the sum of \$1,750,000 had been advanced by my predecessor to a broker in New York, and \$493,000 to a firm in Washington, for the purchase of the public debt.

These accounts have been closed in part by the transfer of the stock agreed to be purchased, and in part by replacing the money in the public treasury. There has been no loss from these transactions; but Digitizett was considered that such an advance of money to agents for the pur-

chase of the debt was of doubtful policy, and might become hazardous, and lead to a misapplication of the public funds, and to favoritism. It was determined not to continue that method of redeeming and purchasing the public debt. Public notice was at once given that the \$5,000,000 loan of 1843, bearing five per cent. interest, and redeemable on the 1st July, 1853, would be redeemed at the treasury on that day, or at an earlier period, as set out in the notice; and that interest would cease on it from and after the 1st July, 1853. The notice, marked D,

accompanies this report.

The daily payments at the treasury, in discharge of the public liabilities and the redemption of said loan, did not equal the receipts. A large surplus accumulated in the treasury, and became a cause of alarm in commercial and financial circles. It was hoped that the accumulation in the treasury would exercise a beneficial restraint upon importations and speculative credit enterprises, and bring the business of the country into a safe and wholesome condition; yet, under the apprehension that a panic might arise from a too stringent operation of the treasury, it was determined to make advances to the mint for the purchase of silver for the new coinage, and to enable the mint to pay promptly and in advance of coinage for gold bullion.

The amount of money on deposite in the mint on the 4th of March was \$6,09\$,220, and was increased by the 1st of July to \$8,517,890 05, and was on the 25th of November, 1853, \$11,451,039 30. This enabled the mint to give gold, which circulated as money, for silver that was out of circulation, because of the premium upon it; and for gold

bullion that could not circulate as money until coined.

It is believed that this operation tended to lessen the effect of the accumulation; but the accumulation still continuing, it was thought advisable further to lessen it by the purchase of another portion of the public debt, at the current market price, in the cities of Philadelphia and New York, as authorized by law; and an arrangement was made with a broker, at each of those places, to make such purchases, to be paid for on the assignment and delivery of the stock at the treasury. These purchases were continued until the 1st July, 1853, and ceased after that date. The amount still continuing to accumulate in the treasury, apprehensions were entertained that a contraction of discounts by the city banks of New York would result from the weekly statements required from those banks under an act of the legislature of that State, and, combining with the fact of the large amount in the treasury, might have an injurious influence on financial and commercial operations. With a view, therefore, to give public assurance that money would not be permitted to accumulate in the treasury, if the public debt could be had at the current market price, a public offer was made on the 30th July to redeem at the treasury, between that time and the 1st of December, the sum of \$5,000,000 of the loans of 1847 and 1848, at a premium of 21 per cent., and interest from the 1st of July, 1853, on the principal. And on the 22d August another public offer was made for \$2,000,000 of the loans, payable in 1856 and 1862, the former at a premium of  $8\frac{1}{2}$  per cent., and the latter at a promium of 16 per cent., with like interest from the 1st July, 1853. These Digitize notices, marked E and F, accompany this report. It was thought that such a public offer for the stocks, at the then current market price, would be expedient on the part of the government and just and fair to the holders, have a beneficial effect upon the money market, and secure a larger amount of the public debt than any other mode that could be adopted. The result has been satisfactory.

The balance of the loan of the three corporate cities of the District, assumed by Congress in 1836, being \$720,000, a communication was sent to the agent of the trustees of the loan, and a price agreed and accepted, to the extent of \$696,000; and it is expected that the bal-

ance will be obtained, at the same price, in a short time.

An offer was also made for part of the \$5,000,000 Texan bonds, bearing 5 per cent. interest, and a purchase of some of them effected, in the manner stated in the tables. The fact is established, that the public debt of each description can be obtained at the premiums offered and paid, and that the premiums may be reduced as the time fixed by

the terms of the law for redemption approaches.

The balance in the treasury on the 30th of September, with the estimated receipts for the 2d, 3d, and 4th quarters of the present fiscal year, being so far in excess of the estimated expenditures for the same time, will justify the further application of \$15,000,000 to the purchase of the debt, and leave a sufficient surplus in the treasury for any practical purpose. The purchase of the debt has therefore been continued, and \$7,857,495 94 expended in the purchase during the 2d quarter of the year. It is considered that the present prosperous condition of the treasury, growing out of the great prosperity of all the industrial pursuits of the country, affords an opportunity to apply the surplus to the discharge of the public debt, and that it should not be left to embarrass the operation of the government in any future contingency which may require all its energies and resources.

The estimated receipts of the second, third, and fourth quarters of the present fiscal year have been predicated on the present high price of the great staples, on a good foreign demand for our surplus, and on large duty-paying importations, computed in view of the large stock of importations on hand and the stringency in the money market both

here and in England, and the effect of the short crop there.

The estimated receipts for the fiscal year 1854 do not reach the actual receipts of the fiscal year 1853, although the first quarter of 1854 exceeds the corresponding quarter of the year 1853 by \$5,025,297 20.

The estimated receipts for the fiscal year ending June 30, 1855, have not the results of the first quarter to verify them, nor the unquestioned data of good crops and high prices; but the estimate rests upon an average of preceding years, with an estimated increase proportionate to an increasing population and capacity to purchase and pay, calculated without regard to the chances of war, short crops, commercial embarrassment, or a reduction of the tariff.

The imports of the fiscal year 1853, including specie, have been \$267,978,647, and the exports have been \$230,452,250. A fair estimate for profits on our exports and the freight of our vessels would cast the balance of this account in our favor, without estimating the money brought in by emigrants, of which no account is taken.

Digitized for believed that a large stock of imported merchandise remains

in the hands of the merchants, and for that reason, and because of the stringency in the money market, both here and in England, it is calculated that there will be, during the remaining three quarters of the year, a diminished importation, compared with that of the first quarter.

The estimate for the fiscal year 1855 has not been made to exceed that of 1853, for the reason that it is believed that the causes of diminished importations during the latter part of the fiscal year 1854 will be extended into a part of the succeeding fiscal year, and because the agitation of a reduction of the tariff will have a tendency to prevent

importations beyond the actual demand for consumption.

Most articles of manufactured merchandise, like the annual productions of agriculture, are necessarily consumed within the year, and again restored by productive industry for the succeeding year; and, with a population able to pay, there is a great uniformity in the annual amount of imports and exports. There are often causes, however, which prevent a regular and progressive increase; such as short crops, low prices for exports, either at home or abroad, without the disturbing influence of war. Still it is believed that the receipts of the fiscal year 1855 will be sufficient to meet the expenditures of the year and a reasonable purchase of the public debt, and justify a reduction of the duties by adding to the free list and reducing the tax upon many other articles of importation.

The table H, accompanying this report, exhibits the foreign articles imported free of duty, and their value, for the six years from 1848 to 1853 inclusive, and also the foreign articles imported paying duty, with

their value and rate of duty, for the same time.

The table I, accompanying this report, exhibits a separate list of the foreign articles, which it is hereby proposed shall be added to the free list for the purpose of reducing the revenue. The revenue collected from the articles in table I, for the last year, is about \$8,000,000; in which amount, it may be computed, the revenue will be reduced, by

the adoption of the proposed additional free list.

This will leave the revenue larger than a proper and economical administration of the government will require; and for the purpose of further reduction, it is now proposed to arrange the articles paying duty in two classes—the one class contained in the table K, accompanying this report, to pay what may be considered the high duty of 100 per cent., and the other class to pay the moderate duty of 25 per cent., and to include all imported articles not in the free list, nor in the table K of high duties. This equalisation will reduce the revenue about \$4,500,000. This still leaves the revenue computed upon the imports of 1853 at about \$45,000,000 from customs; below which point it is not proposed to reduce the duties until the public debt is paid. The change now proposed in the rate of duty is designed to

The effect of making the duties 25 per cent. on all articles imported not included in the free and higher lists, will be to give greatly less trouble in the collection of the revenue, and to raise the duties on some articles, and reduce them on others. When the duties are raised, the change may act in restraint of importations, and when reduced, in their positive dayor; and the one result, to some extent, will counteract the other.

The proposed reduction, had it been applied during the last year, would leave an abundant revenue for all the reasonable wants of the goverment in time of peace, and allow the proper addition to the army and navy to meet the exigencies of an augmenting population and an increasing commerce, and leave the receipts from the sale of public lands to be applied to the purchase of the public debt, to which these

proceeds are pledged by law.

It is not proposed to enter into any extended argument to prove that the articles in table I should be added to the free list, nor to prove the propriety of the proposed reduction of duties to the uniform standard of 25 per cent. When revenue is not needed, articles of general use for manufacturing and other purposes, not the growth or production of the United States, or but partially so, should not be taxed; and no higher taxes should be levied on other importations than may be necessary for the economical wants of the government, thus leaving commerce as free and unrestricted as possible. Let the tariff be reduced as Congress, in view of the present wants of the government, shall deem best, the increasing population, production, industry, and enterprise of the nation will still necessarily add to the importations, and consequently to the revenue, what shall be needed for increased expenses.

The tables accompanying this report exhibit the free lists of England, France, Belgium, Portugal, Brazil, Austria, Spain, Russia, Cuba, the Zoll Verein, Chili, Netherlands, Hanse Towns, Norway, Mexico, and Sweden, and mark the progress of free trade among commercial nations. Unrestricted commerce, binding the nations of the earth in stronger bonds of peace by mutual benefits, has numerous and increasing advocates in this and other commercial countries. The principle of free trade may not yet be sufficiently verified from experience, in this and other nations, to justify its full adoption, but the progress towards free trade, now proposed, will be justified, it is believed, by both public opinion and public interest. It is considered that the taking off the duty on the raw material used in our manufactories will counteract the reduction of duties on foreign manufactures, and, when compared with the operations of the present tariff, will not materially affect the interests of domestic industry or commerce.

It is not proposed to change the principle of ad valorem duties, but it is for the consideration of Congress, whether a specific duty on iron, made from the average of the last three or four years' ad valorem duties, might not give greater stability to the iron business, and more satisfaction to consumers, and, at the same time, prove equally beneficial to

the revenue.

It is proposed to make salt free of duty. The average annual revenue from that article, for the five years to 30th June, 1852, is only \$232,284, while the annual fishing bounties, exclusive of the drawback on pickled fish, for which the salt duty is a pretext, amount to \$289,413, besides other heavy annual expenses to prevent frauds. A report upon the subject of the fishing bounties, from J. Ross Browne, with its references, is herewith submitted. For the reasons stated in that report, it is recommended that the fishing bounty be repealed, and that branch of industry be left to the fair competition which causes other maritime enterprises to flourish.

The table of imports and exports for the fiscal year ending 30th June, 1853, accompanying this report, and heretofore mentioned, compares favorably with those of preceding years, and marks our increasing capacity for commercial intercourse. The table of tonnage, which also accompanies this report, shows that our tonnage is now 4,407,010 tons, and exceeds that of any preceding year by 268,000 tons. These tables prove that we enjoy a prosperous commerce, with an increasing

capacity to extend it.

The table exhibiting the operations of the mint also accompanies It shows the entire coinage to 31st October last to have been \$370,008,192 50; the gold coinage, from the 1st January to the 31st October of the year 1853, to have been \$46,998,945 60, and the silver coinage \$6,996,225, and proves an active and growing demand for gold and silver as a currency for actual use; whilst the imports of gold and silver, including what is brought to the Atlantic from California, without estimating for that brought in by emigrants, compared with the exports of gold and silver, prove that, within four years, the large amount of \$135,972,095 73 has been added to the gold and silver coin remaining in the country. Should this increase continue for but a short term of years, this country will be able to dispense with banks of issue, and their attendant evils, and have the gold and silver currency contemplated by the constitution. The operations of the mint and its branches for the past year show a very favorable result, and the recoinage of silver has, in many places, removed the inconvenience arising from small bank notes and want of change. It may reasonably be expected that the supply, in the course of a few years, will be ample, and extended to every section of the country.

The operations of the mint at Philadelphia and the branches require that the Director should have an assistant. The salaries allowed by law to clerks employed in the former have been found insufficient to retain the best, and recently two of the most skilful and experienced

clerks left on that account.

It is thought that a coinage of an alloy resembling German silver may be beneficially substituted for the copper, and experiments to that end have been directed. Should they prove favorable, the result will

be presented during the session.

The branch mint at San Francisco has been contracted for, to be furnished and ready for the coinage of \$30,000,000 per annum by the 1st of February next, and there is every reason to believe that the contract will be complied with, and the mint there put into operation by that time, thus abundantly supplying the people of the Pacific coast with coin, for all the purposes of exchange and commerce, from their own mines.

Under the provisions of the act of the last session authorizing an assay and melting and refining office to be established in New York, to be placed in the custom-house there, should there be room for it, and if not, giving the Secretary of the Treasury authority to lease or otherwise obtain a suitable building for the same, an investigation was made, and it was ascertained that there was no room for the assay office in the custom-house, and that the building did not afford sufficient

space for the business of the custom-house, even after removing the assistant treasurer's office.

Many buildings were offered, and some of them examined, and the buildings belonging to the Bank of Commerce and the Bank of the State of New York, and adjoining the custom-house, were found well calculated for the assistant treasurer's office, and also to furnish sufficient accommodation for the surveyor and his clerks, and a portion of the collector's clerks, with the officers of the assay office. There was sufficient vacant space on the part of the lot next Pine street for the necessary buildings for the work of assaying, melting, and refining. negotiation was entered into for the lease of the bank buildings, with the privilege of purchasing should Congress make the necessary appropriation. The property was rented for the term of fifteen years, at a rent of \$53,000 per annum, with the privilege, should the appropriation be made, of purchasing within two years at \$530,000, with interest from date of the lease, the payments made for rent to be deducted from The leases and contracts accompany this report. bank buildings have been altered to suit the assistant treasurer's office, and to make room for the clerks of the custom-house, and for the superintendent of the assay office and his clerks. The construction of the assay building has been commenced, and is now in the course of completion, and all the necessary implements, &c., for the assay office, and for melting and refining, are ordered to be prepared by the 1st of February next, with the hope and expectation to get it into operation by the 1st of March.

The custom-house at New York being insufficient for the increased business at that port, and the bank buildings adjoining it being found ample for all the purposes of an assay office, and in fact for a mint, should Congress wish at any time to have coining done there, the arrangement for the purchase was made with a knowledge that the price agreed to be given was high; but it was thought, under the circumstances, to be worth to the United States the sum agreed to be given. The purchase, as provided for in the leases, is recommended to Congress.

Immediately upon taking charge of the department, information was received by me that certain additional duties imposed under the tariff act of 1846, on goods entered ten per cent. below the appraised value, had been ordered by my predecessor for distribution between the collector, naval officer, and surveyor of the port of New York, and that the amount had been withdrawn or withheld by the collector from the treasury, and deposited with a banking or trust company in that My predecessor having previously decided against the claim, it was thought, upon examination, that the twenty per cent. additional duty was public revenue to which the collector, &c., of the different ports had no rightful claim. The order of distribution was therefore revoked, and the money directed to be replaced in the treasury. being done, and those officers still asserting claim, Mr. Maxwell, collector of the port of New York, upon leaving office, took out of the customs received the moiety of twenty per cent. additional duties during his term, and made a special deposit of it with G. C. Bronson, his suc-He was directed to pay the money into the treasury; but before this was done, at the instance of the naval officer, &c., the sum

was attached by order of the judge of the United States circuit count for that district, and has been paid into court to await the decision upon the merits. Directions have been given to prepare the case for trial in the circuit court, and for the Supreme Court, should the decision of the

court below be adverse to the rights of the United States.

The act of Congress approved the 3d of March, 1841, limits the salaries of the collector, naval officer, and surveyor of New York and some other ports. It was considered that from no source whatever could the amount they were entitled to receive exceed the sum at which Congress had thus limited their compensation. Yet, notwith-standing that act, it had been decided that certain fines and penalties imposed by previous acts for violations of the revenue laws, one moiety of which had been directed to be divided equally between those revenue officers, should be so divided. The department had acquiesced in the decision. Thus the compensation of those officers was swelled beyond the point fixed by said act. Those fines and penalties, at the custom-house at New York, for the fiscal year ending June 30, 1853, amounted to the sum of \$19,755 72, and the moiety thereof was divided between the collector, naval officer, and surveyor of that port, giving to each \$3,292 62 over and above their fixed salaries.

The one moiety of the twenty per cent. additional duties which those officers also claim during the official term of Mr. Maxwell, amounts to the sum of \$65,769 80; and, should the decision of the question be in their favor, there can be no question that the compensation of those officers will be more than was intended by Congress, and more than a just compensation for their services. If the New York custom-house officers are entitled to a moiety of this twenty per cent. additional duty, the like officers at other ports will also be so entitled. When claims are asserted against the collector of a port for which a judgment may be rendered and execution levied upon his private property, the desire arises to hold the amount until the question is decided by the courts, under the belief that the Secretary cannot, under existing laws, pay the judgment without an act of Congress. The attention of Congress is called to these questions, in order that the proper remedy may be ap-

plied.

Instructions accompanying this report were sent to the several collection districts, with the view of securing efficient and reliable subordinate officers, and to ascertain whether any and what officers here tofore employed ought to be dispensed with. The collection districts have, in part, been visited by agents of the department, with instructions to examine the manner of keeping the books and accounts, and to ascertain in what manner the various employees discharge the duties confided to them, and also whether there has been a surplus of deficiency of force employed, and to make report to this department. In some of the districts part of the official corps employed has been dispensed with, and in others it has been thought best, with a view to the prompt discharge of the duties, to allow additional officers. In some cases the compensation has been increased, and in others it has been reduced. It is intended to have all the other collection districts visited and examined in like manner.

Many applications have been made for appointments as secret inspec-

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis tors of the customs. Upon examination it was found that it had grown into a practice for the department, at its discretion, to appoint secret inspectors of the customs at different rates of compensation, and that latterly the number of such appointments had greatly increased. A statement of those thus employed since the 20th September, 1850, with the rate of compensation allowed, accompanies this report. It could not be ascertained that any advantage to the revenue had resulted from the employment of this class of officers, and their employment was discontinued.

An examination was also made into the revenue cutter service, with a view to ascertain the character of the service and its efficiency. It was found that a large number of additional officers had just been appointed, and after allowing a captain and three lieutenants to each vessel, there were still twenty-seven officers more than the service required or the law allowed. The matter was submitted to the President, and the supernumerary officers dismissed. A list of the officers thus dismissed, and of those now in service, with a list of the revenue cutters and their stations, accompanies this report.

Besides the \$2,243,000 which was found at the commencement of my official duties to have been advanced to agents for the purchase of the public debt, it was ascertained that the further sum of \$475,000 was in the hands of agents under agreements to transfer the same for the department to different places of deposit, together with the sum of \$2,226,982 27 unaccounted for, and designed to pay interest, &c.

The withdrawal of this large sum of \$4,944,982 27 from the treasury, where the laws require it to be kept, and its deposit in the hands of agents for considerable periods of time being deemed hazardous to the treasury, if not in direct violation of law, it was thought best to reclaim the amount, and abandon that mode of transfer and paying interest, &c., and to effect the transfers by the sale of treasury drafts at the points where the money was needed for disbursements, as authorized by law, or by an actual transfer by an officer of the department, and to have the interest, &c., paid by the officers of the treasury. The plan adopted answers all the requirements of the service, with all necessary economy and despatch, and with less hazard than the previous one. It is proper to state that all the above sums have been replaced in the treasury, except \$100,000, for which suit has been instituted at Columbus, Ohio, and is still pending. A pledge of stocks of various descriptions was taken for part of the \$4,944,982 27, but none had been taken for the \$100,000 in suit in Ohio, and there is some apprehension that that sum will be lost.

Upon a careful examination and consideration of the treasury acts, it was considered within the power and duty of the department, it not absolutely required, to cause the public money to be always in the treasury, or in the custody of the assistant treasurers and depositaries designated by law, until regularly withdrawn for the purpose of disbursement in accordance with appropriations; and that all powers vested in the department in relation to the collection, safe-keeping, transfer, and disbursement of the public money, should be entrusted to and exercised by its officers. That plan has been adopted and adhered to, and no difficulty or inconvenience has arisen from the working of the system, and it is believed none can arise.

The 6th section of the act to provide for the better organization of the treasury, and for the safe-keeping, transfer, and disbursement of the public money, requires it "to be safely kept without loaning, using, depositing in banks, or exchanging for other funds." The section not only requires the assistant treasurers, &c., to perform the duties specially imposed by the act, but also requires them to perform all other duties which should be imposed by Congress or by any regulation of the Treasury Department made in conformity to law. The disbursing agents of the several departments of the government being without safe places of deposit for the public money entrusted to them, it was deemed right and within the provisions and the spirit of the law to require the treasurer and the assistant treasurers and depositaries designated by law to receive deposites from the disbursing agents of the government, and to pay out the same on their checks. A regulation to that effect was issued and is in operation, and accompanies this report. It is a great convenience to disbursing agents, and also secures the safety of the public money. The privilege of so depositing has not as yet been embraced by all the disbursing agents, and it has been suggested that some of them deposit with banks and brokers, under an erroneous idea that the act does not apply to them. It is believed that such deposites are in contravention of the law. No loss would be likely to occur in prosperous times; but, in adverse times, the money might not be forthcoming to meet the public demands. If this regulation should continue, and all the disbursing agents avail themselves of its advantages, the assistant treasurers at the principal ports where the public money is collected and disbursed, will require an additional clerk, at a competent salary, to act for the assistant treasurer in case of necessary absence.

In the Treasury Department, the accounts of all collectors, disbursing agents, &c., are rendered and settled. The law requires collectors to render their accounts quarterly, but authorizes the Secretary to require them oftener. Upon examination, it was found that the accounts of collectors of the customs were rendered quarterly, but did not generally reach the department until about the termination of the succeeding quarter, and were not settled by the accounting officers for some seven, eight, nine, or even more months from the end of the quarter for which they were rendered. left unsettled accounts with collectors of the customs for at least twothirds of the annual revenue from that source—say over \$30,000,000 and left in the hands of some of them large amounts until the settlement of their accounts. The prompt rendition and settlement of these accounts being deemed of vital importance to the correctness of the same and the safety of the revenue, it was thought that a change should be effected, if possible. Upon inquiry and investigation, it was considered that these accounts could be rendered monthly, and settled within the succeeding month. A regulation to that effect was issued, requiring all collectors to render monthly accounts from and after the 1st of July, 1853, which accompanies this report. The accounts for the months of July, August, and September were rendered, and settled under this requisition; and for the month of September, all, except those of the Pacific coast and some small districts on the Atlantic, were rendered and settled within the month of October. The fact was thus ascertained that it is entirely practicable to have the accounts all so rendered and settled within the month, except those on the Pacific coast, which will require about two weeks longer.

There are other reforms as to the manner of keeping the books, and the statistical information to be derived from the custom-houses, and the registering of it in this department, that may be introduced with advantage to the public service, but which time and care are required

to bring about and enforce properly.

Attention was also given to those branches of the department where the accounts of disbursing agents and others, owing money to or having claims against the government, are adjusted and settled. It was found that the official corps was disorganized, and some of the bureaus very much out of order, and greatly in arrear with the business confided to them.

The table W, which accompanies this report, exhibits the aggregate of accounts rendered and unsettled in each office in the month of March, 1853, and the amount of them which were outstanding on the books of the Solicitor of the Treasury. This table shows that there were accounts unsettled, to the aggregate of \$132,521,704 09, and that there had been settled an aggregate of \$30,500,154 50, leaving a balance of \$102,021,549 59, still outstanding; but of these there are \$14,918,802 36 on the books of the Solicitor of the Treasury, most of the accounts having been stated by the Auditors. For the purpose of closing these large balances, the accompanying letter was sent to the First and Second Comptrollers of the Treasury and the Commissioner The settlements will be enforced as soon as practicable. In 1842, after the duties became payable in cash, the duty bonds remaining unpaid to the debit of the several collectors were passed to the debit of their successors, and continued to encumber their accounts and embarrass settlements. On the 9th September last, the Commissioner of Custmos was directed to credit the collectors' accounts with these bonds, and open an account for them on the books of the treasury. bonds constitute an additional outstanding sum on the books of the Solicitor. All claims due the United States, after a failure or refusal to pay, are put in suit in the district where the parties or some of them reside, and, except post office suits, go upon the books of the Solicitor of the Treasury, and are collected under his direction.

These uncollected claims, including duty bonds, on the books of the Solicitor, have accumulated from the commencement of the government, and now amount to the large aggregate of \$21,247,516 89. No commission or compensation is allowed to district attorneys for their collection, and no authority given to the Secretary upon the subject, or to disencumber the accounts of these accumulating balances. It is submitted to Congress, that authority might be given to allow compensation for the collection of these debts, and to compound for them when the parties are unable to pay in full, and there is no fraud, and to have

the lost balances carried to an appropriate account.

It was also ascertained that many disbursing officers had not rendered their accounts within the three months required by law, whilst many of the accounts in the Third Auditor's office had been in the office unsettled for one, two, three, four, five, and even more years, and

the work was greatly behind in most of the offices. It was determined to reform the condition of these offices as soon as practicable. The first object to be effected was the prompt transaction of the current business, and the employment of as large a force as could be spared to bring up

the arrearages.

The Third Auditor's office, under the newly appointed Auditor, F. Burt, charged with the settlement of a portion of the accounts of the War Department, was greatly in arrear. He was required to ascertain the state of its business, and put it in the best possible condition by the meeting of Congress, and make report up to that time. His report to the 31st of October, 1853, is herewith submitted, and exhibits the condition in which he found his office, and that which it had reached on that day. It is due to Mr. Burt to state, that besides the labor performed, as exhibited in his report, more correct principles of accounting and settling have been introduced, and that he is entitled to the credit of the reform he has made. The condition of that office, as appears by an additional report, is, at this time, such as Mr. Burt anticipated, and now the office has brought up its arrearages, and is

capable of promptly acting upon all the business confided to it.

The business confided to the Second and Third Auditor's offices could be more advantageously distributed than it now is, and, it is believed, to the more prompt despatch of their duties. A proposition detailing such a partition accompanies this report, and is recommended to the consideration of Congress. Congress, in constituting and carrying out the Treasury Department, adopted the principle of having all accounts with and against the government stated, with a report of facts by an Auditor, and a re-examination by one of the Comptrollers, or the Commissioner of Customs. This principle has been departed from in allowing the Commissioner of Pensions to issue certificates of allowance to pension agents, and the pension to be paid without the allowance having been revised. The proposed arrangement gives to the Third Auditor the settlement of all army accounts, and to the Second Auditor all pension accounts, and brings the allowances of pensions by the commissioner under the control of the Second Auditor and Second Comptroller, thus restoring uniform action as to all allowances and settlements in the department.

Upon examination, the Sixth Auditor's office, charged with settling the accounts of postmasters and contractors for carrying the mail, was found to be greatly in arrear. The accounts of postmasters for small balances were found to have remained unsettled for several years, and such was the general condition of the business of the office as to render it doubtful whether the annual exhibits required by law could be made in time for the meeting of Congress. The newly appointed Auditor, W. F. Phillips, by efficient arrangement and persevering action, has restored order to the office and system to the business, and placed it in a condition to adjust and promptly settle all accounts. His report, herewith submitted, exhibits the condition in which he found the office, and that in which he has placed it, and entitles him to credit for the manner in which he has managed its duties.

The reports from the First, Second, Fourth and Fifth Auditors, the First and Second Comptrollers, the Commissioner of Customs, the Register Digitizes the Treasury, the Solicitor of the Treasury, and the Treasurer of

he United States, are herewith submitted. These offices, except those of the First and Fifth Auditors, were not so much in arrear as the Third and Sixth Auditor's offices; but greater promptitude and despatch have taken place in most of them, and it is believed that better rules of action have been introduced. The arrearages can be brought up, and the regular despatch of the current work secured.

The clerks in all the divisions were classified under the act of Congress of last session for that purpose, the examinations having been made as required by the act. The proper arrangement of business in the different offices requires that it shall be classified and allotted to a certain number of clerks, and a competent clerk placed in charge of each class, and made responsible for its prompt despatch, and that correct rules of action shall prevail in discharging the duties. The head clerks of these classes should have better salaries than those under them. The third and fourth classes do not furnish the requisite number of clerks for this purpose in some of the offices, and the salary of the first · class is not a sufficient compensation for any clerk fit to be employed in the department. The act of Congress requiring clerks to be classified and examined before appointment seems to indicate an intention of procuring more competent clerks, and that the tenure of office should be more permanent. Many of the clerks have families, and a large number do not receive sufficient compensation for their support; and as the cost of living has greatly increased, the attention of Congress is called to this subject, with the recommendation that this class of meritorious officers shall be better compensated.

There is no limitation to the presentation of claims against the United States before the accounting offices, and claims disallowed, in whole or in part, are presented again and again upon the same, or but slightly varied, statements of facts. There are precedents in the department allowing these re-examinations, and large sums have been paid upon claims previously presented, adjudicated upon, and disallowed. There are other, and, it is believed, better precedents in the department against these re-examinations, holding the prior examination and disallowance of the claim, in whole or in part, conclusive until Congress directs the re-examination. The rule established by the latter precedents has been adopted, and no re-examination is allowed except upon the principle of a new trial at law, or a re-hearing or review in equity, when the application is made on sufficient grounds and within a reasonable time. The

attention of Congress is respectfully called to this subject.

An abstract of the Coast Survey operations, under the superintendence of Professor Bache, also accompanies this report. It will be seen that the work has made good progress during the past year. The means furnished appear to have been carefully and economically used by the superintendent, and to have produced ample results. The operations in the field or affloat, and in the office, have extended to all the States and Territories of our vast sea coast on the Atlantic, the Gulf of Mexico, and the Pacific. On the Atlantic the triangulation reaches, with an interval of 22 miles, from the mouth of the Kennebec river, Maine, to Boyne sound, North Carolina. It is commenced in South Carolina, Georgia, and Florida, and extends from Mobile nearly to New Orleans, and from the head of Galveston bay to Matagorda bay,

in Texas. The other operations follow it closely. A hydrographic reconnoissance of our western coast has been made from San Diego to Frazer's river, and preliminary surveys of most of the harbors, with charts of them, have been published, or are in progress. It is believed that the history of such surveys does not present a parallel to the promptness with which the execution and publication of the work on that important coast has been made, keeping pace with the development of a commerce itself without a parallel. One hundred and forty-three maps and charts have already been issued from the coast survey office, including sketches of examinations of dangers on the coast where the regular surveys have not yet reached the localities. The report of the superintendent for the past year is accompanied with fifty-five maps and sketches, showing the progress of the work, and giving information important to navigation and commerce. The necessity of publishing the numerous observations accumulated in this work, and upon which the results are founded, is respectfully urged upon Congress. Besides, the usual sketches, a map, ordered by Congress, showing, by colors, the progress of the different parts of the work, is ready for transmission. The present period of prosperity should be used to furnish all reasonable resources for the completion of this great work of science and utility; and, in order to facilitate its final completion, it is recommended that the estimate presented by the superintendent be granted. department has derived important assistance from the coast survey in the surveys relating to light-houses and in the location of surf-boats. In the distribution of the reports, papers, &c., the superintendent and his assistant should be vested with the franking privilege.

A report and supplement from the Light-house Board accompanies this report, exhibiting its operations for the past year. That board is charged with the duty of providing and distributing supplies of all, kinds to the different light-houses and light-vessels; of making examinations and instructions; of submitting estimates of cost of repairs of the different towers, buildings, sea-walls and light-vessels, and of raising, cleaning, painting, numbering, and replacing all buoys authorized by Congress, &c. These duties have been discharged with promptitude and efficiency, and it is believed with economy. It will be seen that there are now in operation 347 light-houses; 27 are in the course of construction, and 44 more authorized, but not yet commenced. There are 44 light-vessels in operation and five in the course of construction. The estimate for this service for the fiscal year ending June 30, 1854, was \$\$90,033 42; and for the year ending June 30, 1855, it is \$906,161 43. These light-houses and light-vessels, extending over our Atlantic and Pacific coasts and our lakes, add greatly to the security of our commerce, which, as it augments, calls for additional light houses and light-vessels on our extended coasts, and consequently for increased expenditure. These light-houses and light-vessels should be sufficiently numerous to afford the benefit of light wherever the safety of vessels requires it; but lights should not be so multiplied as to mislead navigators, and should always be of the best and most reliable character for their positions. The science and practical knowledge the Light-house Board, aided by that of the Coast Survey, it is believed

Digitized will guard the department against mistakes in the location of the light

secure the best and most permanent light-houses with the proper lights, and confine the expenditure to the real objects sought to be obtained

with the necessary economy.

The abstract accompanying this report shows twenty-three custom-houses belonging to the government and now in use; also fifteen for which appropriations have been made by Congress, and proceedings taken towards their construction. This abstract exhibits the condition of the title and jurisdiction to each as far as acquired; the progress made under the appropriations; the amount thereof, with estimates of the sums that will be required to complete those under contract; and the sums required to proceed with the others. The appropriations are not sufficient to complete these buildings of the materials and in the style suitable to such structures, and therefore additional estimates have been submitted.

The construction of these buildings is confided to the department, and almost every thing but the amount of the appropriation left to the discretion of the Secretary. No system had been devised for the due performance of this duty, nor had the management of the business been confided to any particular branch of the department. An architect had been employed in the department at a salary of \$3,000 per annum, with travelling expenses allowed when absent inspecting the works, He was paid out of the several appropriations, according to the time given to each work. Local architects and superintendents had also been appointed, and were paid out of the appropriations, but there was no system of keeping or rendering accounts at the respective works, nor of keeping the same in the department. With a view to a more -efficient management, application was made to the Secretary of War for a scientific and practical engineer to be placed in charge of the construction of these buildings, and Captain Alexander H. Bowman, of the engineer corps, was detailed and assigned to that duty. General regulations for the conduct of the business have been adopted and sent to those in charge of the respective works, and a department of construction organized for the supervision of the whole. The general regulations accompany this report, as also a copy of the local organizations, in order that Congress may see how the business of construction is conducted by the department. The compensation paid to Captain Bowman has been fixed at \$8 per day, less his pay as captain, with his travelling expenses whilst inspecting the works; and the architect has also been retained, to aid the department in his particular The work at the New Orleans custom-house has made good progress during the spring, summer, and fall, notwithstanding the sickness at New Orleans, and it is intended to continue the work through the winter. For the Charleston custom-house, the foundation is nearly completed, and the granite for the basement is being delivered; and that work also will be continued through the winter. The other custom-houses contracted for, as stated in the abstract, are in various stages of progress, and it is expected that greater despatch, and an improvement in the work and materials, will result from the new arrangements.

It appearing that contracts had been awarded to persons unskilled in the construction of the works contracted for, and the contracts subsequently sold, in the advertisements published by the department notice. Digitized for FRASER was given that the contracts would only be awarded to those practically skilled in building, and that assignments would not be allowed

without the consent of the department.

The custom-house contracted to be built at San Francisco, California, was located on a square embraced by what is termed the government reserves, and a large sum had been expended in filling up the square and piling for the foundation. The State of California set up claim to the reserves, and upon investigation it was considered hazardous to proceed with the custom-house, as the title might prove defective. Notice was given to the contractors, and the work was suspended, and application made to the State of California for a relinquishment of all claim to the custom-house square. The legislature passed an act to sell the government reserves, excepting out of the sale the custom-house lot; but there was no release to the United States of all claim to it. Consequently, the work remains suspended, and the application has been renewed for the release, and it is expected the release will be obtained, and that the contractors for the custom-house will be enabled to proceed with the building.

The abstract accompanying this report exhibits marine hospitals at Chelsea, near Boston; Norfolk, Virginia; Ocracoke, North Carolina; Cleveland, Ohio; Chicago, Illinois; Pittsburg, Pennsylvania; Louisville, Kentucky; Paducah, Kentucky; Natchez, Mississippi; New Orleans, Louisiana; Mobile, Alabama; and Key West, Florida. Appropriations have been made for such establishments at Napoleon, Arkansas; Vicksburg, Mississippi; Evansville, Indiana; Portland, Maine; San Francisco, California; and the hospitals are in course of construction, and some of them, as appears by the abstract, nearly completed. At Baltimore, New Orleans, Charleston, Cincinnati, Nashville, and Barnstable, arrangements for sick and invalid seamen are made with medical hospitals and other institutions. In other, and smaller ports, the collectors provide for invalid seamen, conformably to circulars from the depart-The marine hospitals are sustained, in part, by the hospital fund collected from seamen, and in part by appropriations by Congress. The construction of hospitals will be under the superintendence of the department organized for the construction of custom-houses, and the same system of accountability and inspection will be applied to By-laws and regulations for the government of the respective hospitals, so modified as to suit each locality, have been prepared and put in force, and the charge of them, in this department, so arranged hat the accounts are required to be periodically rendered, and a proper economy enforced. These hospitals, with adequate provision for sick and disabled seamen, are recommended to the continued favorable consideration of Congress.

The act of Congress to provide for the better security of the lives of passengers on board vessels propelled, in whole or in part, by steam, has claimed the attention of the department. The supervising inspectors were all in due time appointed, as also the local boards provided in the act. They entered at once on the discharge of the duties specified in the act, and have been arduously engaged in giving it full effect. There will not have been a year's experience, under its full operation, intil about the 1st June next; but so far its operation has been highly

favorable, and gives reason to hope that better security, both as to life and property, on steam-vessels, will be the result of its faithful and vigilant execution. Interrogations have been sent out by the department, under the provisions of the 40th section, in order to elicit the information designated in the 39th section, and when answers shall be received the interrogations and the information elicited will be duly communicated. In the mean time, a report received from the board of inspectors convened at Cincinnati, and giving much valuable information, is herewith transmitted. The operation of the act promising to be highly beneficial, the Pacific coast should participate in all the benefits and advantages it is calculated to afford. Under the existing provisions of the act this is impracticable, and therefore it is recommended that a new supervising district be established, to embrace that coast, with a supervising inspector. Inconvenience arises from there being two sets of local inspectors—one set under the act of 1838, and the other set under the act of 1852. The inspectors under the act of 1838 are in no way under the superintendence of this department; although, without its concurrence, the necessary papers cannot be issued by the custom-house officers. under the act of 1852 are under the superintendence of the department. It is not desirable that the boats inspected under the act of 1838 should be subject to all the provisions of the act of 1852; but it is desirable that there should be but one set of inspectors, and that all should be under proper superintendence.

Attention is called to the Louisville and Portland canal. The ten thousand shares of capital stock in that company, under the provisions of the act of the legislature of Kentucky, have been reduced to 3,712, of which 2,902 belong to the United States, and 810 to individuals. These \$10 shares will be reduced by the earnings of the canal for the year 1853, of which the company will furnish a report, and the earnings of 1854 will complete the purchase, and leave the United States the sole stockholder and proprietor of the canal, and entitled to possession of it on complying with the condition of theact of Kentucky under which the private stock has been purchased. That condition requires that no more tolls shall be collected than will be sufficient to keep the canal in repair, pay the necessary cost of superintendence and custody, and make all the improvements needed, fully to answer the purpose of its establishment, and to protect and guard the interests of commerce. An appropriate act is wanted at the present session, to provide for the superintendence of the canal and the carrying out of the provisions of the act of the legislature of Kentucky, in order to make the canal free, as far as practicable, to the commerce of the Ohio.

Attention is also called to the \$5,000,0000, balance of the \$10,000,000, agreed to be given to Texas in the settlement of the boundary of New Mexico, and not yet issued, but retained under the proviso to the boundary bill. The late administration decided that all the stock of Texas mentioned in that proviso must first be released to the United States before the stock could be issued, and the present administration determined not to disturb that decision. The consequence is, that the creditors of Texas remain unpaid, although many are willing to file their stock and release all claim on the United States, and receive the proportion of the \$5,000,000 accorded to them by Texas, while the

United States, with abundant means to pay, cannot do so, and the debt remains liable to a claim for interest, which, under the act, could not well be refused.

Attention is also called to the fact that the treasury building does not afford sufficient room for the accommodation of the clerks of the department, and that the Land Office, belonging to the Department of the Interior, is now accommodated in the building to the exclusion of part of the clerks of the Third Auditor, and of all the clerks of the First and Fifth Auditors. The basement rooms in the treasury building have been found so damp and unhealthy as to make it proper to rent a building, and remove part of the clerks of the Third Auditor from the basement. The Fifth Auditor and his clerks had been accommodated in the building occupied by the State Department, but the Secretary, requiring the rooms for his own clerks, requested the removal of the Fifth Auditor and his clerks, and a building was rented and that officer removed to it. The rented buildings are not as safe for the records as the rooms of the treasury building, and there is great inconvenience in having part of the clerical force out of the building, and beyond immediate control.

Attention is also called to the fact that James Collier, late collector of San Francisco, was indicted for failing to pay over the revenue collected by him, and for loaning it in violation of law. He was arrested under a writ issued in accordance with the laws of the United States, and when about to be conveyed by the marshal to California to answer the indictment, was taken out of his custody by writ of habeas corpus, issued by a judge of the State of Ohio, and set at large. There is no law to transfer such cases to a United States judge, and no pro-

vision for an appeal from the decision of the State judge.

Attention is called to the acts of Congress giving authority to rent warehouses and other buildings for the use of the custom-houses. There seems to be no limitation to the authority to rent, other than the discretion of the collector and the sanction of the Secretary. Under pretence of this authority a contract was made by my predecessor with Eldridge, under date of the 28th August, 1851, to construct four warehouses in San Francisco, to be finished in 18 months, and to rent them for the term of ten years from time of completion, at the agreed rent of \$1,500 per month each, subject to revaluation every two years. Another contract was made on the 24th of February, 1853, with Theodore Adams, to construct another building, and rent it for 10 years at \$25,000 per year, the rent to be fixed anew every two years. Upon examination it was thought that there was no authority given to the Secretary to make these leases. The Eldridge buildings had been constructed and about 16 months' rent paid, 12 months of it in advance, to the 1st of January, 1854, and the Adams contract had just been made. Notice was given to Eldridge that the contract with him was considered to have been made without sufficient authority, and that the buildings would be abandoned after the time to which the rent had been paid in advance-Notice was given to Adams that the contract with him was considered to have been made without authority of law, and that the building would not be accepted, nor the contract to rent considered binding on the United States. The attention of the department has since been called to a joint resolution of Congress in relation to the bonded warehouses in the city of New York, the proviso to which, it was contended, gave the Secretary authority to make these contracts and leases, but which, under a proper construction, gives no such authority. It was subsequently thought that the acceptance of the Eldridge houses by the collector and the Secretary, and the payment of the rent in advance, might be deemed a renting within the authority given to the collector and Secretary; and notice has been given that the buildings will be retained until Congress shall decide upon the subject. The notice to Adams has not been withdrawn, and the building will not be accepted unless Congress shall declare the contract and leasing obligatory. It is submitted to Congress that this authority to contract for buildings and renting for long periods, if it really exists, requires modification and restriction within proper limits.

An exhibit also accompanies this report, showing the number of per-

sons employed at each port, with the expenses.

The resolution of the Senate of the 19th of January, 1853, requiring the Secretary of the Treasury to have prepared and submitted to the Senate, at its next session, a general revenue law, with a view of superseding all existing laws upon the subject, &c., has claimed attention; and some progress has been made in the work, which it is expected will be presented, in whole or in part, during the session, and in time for the consideration of Congress.

The circular instructions issued by me from time to time, and not

hereinbefore mentioned, also accompany this report.

All which is repectfully submitted.

JAMES GUTHRIE, Secretary of the Treasury.

Hon. D. R. Atchison,

President pro tem. of the U. S. Senate.

List of papers accompanying the annual report of the Secretary of the Treasury on the finances, of December 6, 1853.

- A. Statement of receipts and expenditures for the year ending June 30, 1853
- B. Statement of receipts and expenditures for the quarter ending September 30, 1853.
- C. Table showing the purchase and redemption of stocks from July 1, 1852, to December 3, 1853.
- D. Notice of the redemption of the five per cent. stocks of 1843.
- E. Notice of 30th July, 1853, of redemption of stocks.
- F. Notice of 22d August, 1853, of redemption of stocks.

G. Exports and imports.

- H. Articles imported free of duty, and their value, for six years.
- I. Articles to be made free.
- K. Articles to pay high rate of duty.
- L. Articles duty free in foreign ports.
- M. J. Ross Browne's report on fishing bounties.
- N. Table showing the tonnage of the United States.
- O. Table of coinage from 1792 to 1853.
- P. Coin and bullion imported and exported from 1821 to 1853.
- Q. Lease and contract of Bank of Commerce and Bank of the State of New York, to the United States.
- R. Circulars to collectors upon their appointments to office, relative to inspectors, &c.
- S. List of secret inspectors.
- T. Statement of revenue cutter officers removed and those now in service; also cutters in service and their stations.
- U. Instructions to treasurer and assistant treasurers to receive deposites.
- V. Regulation requiring monthly accounts.W. Balances on books of accounting officers.
- X. Instructions to First and Second Comptrollers of the Treasury and Commissioner of Customs.
- Y. Instructions relative to duty bonds.
- Z. Balances on the books of the Solicitor.
- AA. Report of Third Auditor.
- AB. Third Auditor, with supplemental report.
- AC. Propositions to modify Second and Third Auditors' offices.
- AD. Auditor of Post Office Department.
- AE. First Auditor.
- AF. Second Auditor.
- AG. Fourth Auditor.
- AH. Fifth Auditor.
- AI. Report of the First Comptroller.
- AK. Report of the Second Comptroller.
- AL. Commissioner of Customs.
- AM. Register of the Treasury.
- AN. F. B. Streeter, Solicitor of the Treasury, report of the state of the business of his office.
- AP. Report of the Treasurer of the United States.
- AQ. Report of the Coast Survey.
- AR. Report of the Light-house Board.
- AS. Custom-houses.

- AT. Regulations for the construction of custom-houses and other buildings.
- AU. Organization for custom-house at Charleston.
- AV. Marine hospitals.
- AW. Report of the board of supervising inspectors.
- AX. Advances made to and persons employed in custom-houses.
- AZ. Circulars issued to collectors since 4th March, 1853.
- BC. Wines, spirits, &c., from 1821 to 1853. BD. Breadstuffs and provisions exported from 1821 to 1853.
- BE. Tobacco and rice exported from 1821 to 1853.
- BF. Goods remaining in warehouse.
- BG. Cotton exported from 1821 to 1853.
- BH. Value and duties on certain articles for the years 1849 to 1850.
- Foreign merchandise imported, re-exported, and consumed, from 1821 to 1853.
- BK. Foreign merchandise re-exported from 1821 to 1853.
- BL. Imports, and imports consumed; exports and tonnage from 1821 to

#### A.

Statement of duties, revenues, and public expenditures, during the fiscal year ending June 30, 1853, agreeably to warrants issued, exclusive of trust funds and treasury notes funded.

D.

# TREASURY DEPARTMENT, March 10, 1853.

Notice is hereby given that the five per cent, stock created under the provisions of the act of 3d March, 1843, will, in pursuance of the terms of its issue, be redeemed at the treasury of the United States on the first day of July next, at which date interest thereon will cease.

Holders of that stock desiring to receive the principal, and interest accrued thereon, previous to the 1st July next, may transmit their certificates, duly assigned to the United States, by mail or otherwise, to this department, and drafts in their favor for the amount of the principal and interest up to the date of receipt here will be remitted, payable by the Assistant Treasurer most convenient to them.

JAMES GUTHRIE, Secretary of the Treasury.

E.

### TREASURY DEPARTMENT, July 30, 1853.

Notice is hereby given to the holders of the six per cent. stocks of the United States of the loan authorized by the act of 28th January, 1847, and redeemable the 31st of December, 1867, and of the loan authorized by the act of 31st March, 1848, and redeemable 30th June, 1868, that this department is prepared to purchase, at any time between the date hereof and the 1st day of December next, to the extent of the sum of five millions of dollars of the said stocks, in the manner and on the terms hereinafter mentioned, to wit:

In case of any contingent competition within the amount stated, preference will be given in the order of time in which the said stocks may be offered. The certificates, duly assigned to the United States, must be transmitted to this department; upon the receipt whereof, a price will be paid compounded of the following particulars:

The par value or amount specified in each certificate.
 A premium on said amount of twenty-one per cent.

3. Interest on the par of the certificate from the 1st of July, 1853, to the date of receipt and settlement at the treasury, with the allowance (for the money to reach the owner) of one day's interest in addition.

Payment for said stocks will be made in drafts of the Treasurer of the United States on the Assistant Treasurer at Boston, New York, or

Philadelphia, as the parties may indicate.

JAMES GUTHRIE, Secretary of the Treasury.

F.

TREASURY DEPARTMENT, August 22, 1853.

Notice is hereby given to the holders of the six per cent. stocks of the loan authorized by the act of April 15, 1842, and redeemable 31st December, 1862, and also to the holders of the six per cent. stocks of the loan authorized by the act of July, 1846, redeemable 12th November, 1856, that this department is prepared to purchase, at any time between the date hereof and the 1st day of December next, to the extent of two millions of said stock, in the manner and on the terms hereinafter mentioned, to wit:

In case of any contingent competition within the amount stated, preference will be given in order of time in which the said stocks of either kind may be offered. The certificates, duly assigned to the United States, must be transmitted to this department; upon the receipt whereof, a price will be paid compounded of the following particulars:

1. The par value or amount specified in each certificate.

2. A premium of sixteen per cent. on the stocks of 1842, redeemable in 1862, or a premium (as the case may be) of eight and a half per cent. on the stocks of 1846, redeemable in 1856.

3. Interest on the par of the certificate from the 1st of July, 1853, to the date of receipt and settlement at the treasury, with the allowance (for the money to reach the owner) of one day's interest in addition.

Payment for said stocks will be made in drafts of the Treasurer of the United States on the Assistant Treasurer at Boston, New York, or Philadelphia, as the parties may direct.

JAMES GUTHRIE, Secretary of the Treasury.

Extract of indigo,
Extract and decoctions of logwood and other dyewoods;
Extract of madder.

Flaxseed,
Flints,
Fruit, green, ripe, dried, preserved or pickled;
Fuller's earth,
Furs, dressed or undressed, when on the skin;
Furs, hatters', dressed or undressed, not on the skin

Gamboge,
Ginger, green, ripe, or preserved
Gold beater's skin,
Gold and silver leaf,
Green turtle,
Gum Arabic,

Gum, Barbary; Gum, East India; Gum Jedda, Gum Senegal, Gum substitute, or burnt starch: Gum tragacanth, Gutta percha, unmanufactured.

Hair of all kinds, uncleaned and unmanufactured: Horns, horn-tips, bones, bone tips, and teeth, unmanufactured

India rubber in bottles, slabs, or sheets unmanufactured; India rubber, milk of; Indigo, Ipecacuanha, Iridium, Iris, or orris root; Ivory, unmanufactured: Ivory nuts, or vegetable ivory.

Jalap.

Kelp, Kermes.

Lac-dye, Lac spirits, Lastings suitable for shoes, slippers, boots, bootees, or buttons, exclusively; Lemons, Lemon-juice, Limes, Lime-juice, Linens, bleached and unbleached; Linseed, Liquorice root, Litharge.

Madder, ground, and madder root: Manganese,

Manna,

Manufactures of mohair cloth, silk twist, or other manufactures of cloth, suitable for manufacture of shoes, slippers, boots, bootees, or buttons,

Maps and charts,

Marble in the rough, slab or block, unmanufactured;

Marble, manufactures of;

Marine coral, unmanufactured;

Medicinal roots, leaves, gums, and resins, in a crude state;

Moss, and other vegetable substances used for mattresses; Music and music paper, with lines, bound or unbound.

Natron, Nickel, Nut galls, Nux vomica.

Others and othery earths used in the composition of painters' colors, whether dry or ground in oil;

Oils, palm, cocoanut, and olive; olive when pure, and not otherwise;

Opium, Oranges,

Orange and lemon peel,

Orpiment,

Osier or willow for basket-makers' use, prepared or unprepared.

Palm leaf, unmanufactured;
Paving stones, paving and roofing tiles, and bricks;
Patent mordant,
Pearls, set or not set, and mother-o'-pearl;
Pewter, when old, and fit only to be remanufactured;
Pineapples,
Plantains,
Polishing-stones,
Pumice and pumice-stone.

#### Quicksilver.

Rags, of whatever material; Ratans and reeds, unmanufactured; Rhubarb, Rotten stone, Red and white lead.

Safflower, Saffron and saffron cake,

Sago,

Sal ammoniac, Salt of all kinds,

Salts, Epsom, Glauber, and Rochelle;

Saltpetre, (or nitrate of soda or potash,) refined or crude;

Sarsaparilla,

Seedlac,

Shaddocks,

Sheathing paper,

Shellac,

Silk, raw, not more advanced in manufacture than singles, tram, or or-

Seeds, viz: hempseed, rapeseed, grass, mustard, clover, canary, carda-

mum, cummin, caraway, coriander; and Seeds of all kinds used for agricultural, horticultural, medicinal, and manufacturing purposes:

Slates and slate pencils,

omalts,

Skins and hides, raw, of all kinds, whether dried, salted, or pickled; Spices of all kinds,

# Report on the bounty allowances to fishing ressels.

Washington, D. C., November 20, 1853.

Sin: On the eighth of October last I received official instructions to proceed on a tour of inspection through the collection districts of New England. In the performance of that service, it became my duty to inquire into the practical operation of the bounty allowances to fishing yessels, and to ascertain how far the revenue boats employed in each district were necessary for the protection of the revenue, or useful, as a means of preventing the frauds alleged to be practised by fishermen. You were pleased to request that I would communicate to the department whatever facts I might obtain, together with such views on the subject as the examination might suggest. In compliance with that request, I have the honor to submit the following statement.

The annexed table exhibits the number and tonnage of enrolled licensed vessels, and vessels licensed under twenty tons, engaged in the cod and mackerel fishery in each district of the United States, during the

year ending 30th June, 1852.

Tables exhibiting the condition of the fisheries, from the origin of the government up to that date, will be found in the report on the fisheries accompanying the report of the Secretary of the Treasury for 1851-2, and in Andrews's report on the British North American Colonies, printed by order of the Senate, in August, 1852.

The bounties paid to fishing vessels from 1810 to 1852, were as follows:

In 1841,	for the	preceding	year	-	-	•	\$355,140 01
1842	do	do	•	-	•	-	235,613 07
1843	do	do	-	-	-	-	169,932 38
1844	do	do	-	-	•		249,074 25
1845	do	do	•	•	-	-	289,840 07
1846	do	do	•	•	-	-	274,942 98
1847	do	do	•	-	•	-	276,429 38

1851	do	do	•	-	-	-	328,265 04
1852	do	do	•	-	-	•	300,976 41
	Total fo	or 12 years	-	-	-	-	3,298,038 34

The requirements of the original act of February 16, 1792, changing the drawback on the exportation of codfish to a bounty on tonnage, and of all subsequent acts regulating the bank or other cod fisheries, are embraced in the circular to collectors of February 20, 1852, which also embraces a careful synopsis of the existing regulations prescribed by the Treasury Department, during a series of years past, for the execution of the laws on that subject.

In order to present a comprehensive view of the abuses existing under this system of bounties, it will be necessary to refer in detail to the

means adopted for their prevention and detection.

1. To entitle a vessel to bounty, an agreement must be made before sailing, between the master and crew, and endorsed by the owner or agent, specifying the share of each man. The object of this provision is to encourage an interest in the result of the voyage, and prevent the owners from depriving the crew of the benefit of bounty, by engaging them at a fixed compensation. Whatever importance may be attached to it, as a means of protection to the owners, it is practically of very little avail to the crew in the distribution of bounty allowances.

2. Three-fourths of the crew are required, under the act of 1817, to be American citizens. Previous to that act, there was no restriction on the subject of citizenship; the entire crew might be foreign subjects. If the fishery has operated as a nursery for American seamen, it has not

been in consequence of any law passed prior to 1817.

3. An examination of each vessel is required to be made by the proper officer of the customs, in order to determine whether she is furnished with the necessary outfit for the fishery. Such examinations are generally understood to be matters of form. The practice among officers of the customs is, to board the vessel before she sails, and report in accordance with the information received from the captain. The general feeling is, that if fishermen choose to go to sea without a proper outfit, it is their own business and not that of the government; and if the crew suffer any hardship or loss from the neglect or cupidity of the owners, they have their remedy in law. It would be difficult to find a single case in which a fishing vessel has been prevented from going to sea, or delayed, on account of her outfit.

4. Regular journals or log-books, containing the daily catch of the

crew, the date of sailing, the ports entered, and date of return, are required to be kept, and sworn to by the captain, as proof before the collector. If every claimant who testified under oath to the legality of his claim could be depended upon, there would be no occasion for such a complexity of forms. It is well known to officers of the customs that but little importance is attached to an oath by this class of men in their dealings with the custom-house. Many of these journals or log-books are made up after the voyage, without reference to time lost or fraudulently employed, and are duly sworn to as authentic records. Nearly every officer of the customs, from Eastport to New Bedford, informs me that this is a practice which they find it very difficult to guard against, and their concurrent testimony justifies the belief that such frauds are of fre-

quent occurrence. 5. Vessels, to be entitled to bounty, must be exclusively employed in taking codfish to be dried, or dry-cured, during the aggregate period required by law, and a certificate to that effect must be subscribed by the claimant and sworn or affirmed to before the collector. A license for cod fishing may be changed to a mackerel or other license during the fishing season, but the aggregate time in the cod fishing must be made up by a subsequent change. Any violation of this provision, such as catching other than codfish, or carrying into market fish of any kind in a green state, forfeits the claim to bounty; yet so common an occurrence is it, and so little effect has it practically in forfeiting the claim to bounty, that the fishermen themselves scarcely pretend to disguise the fraud. The department is well aware that applications are made every day by collectors of the customs for new revenue boats, additional boatmen, and increased allowances for repairs, all based upon the necessity of keeping a more rigid guard upon the movements of these fishing vessels. The files of the department can scarcely contain all the letters that are received, not only from the collectors in the fishing districts, but from the representatives, senators and governors of the States, complaining of the frauds committed by fishermen and others, and urging the appointment of additional inspectors, aids to the revenue, and boatmen, and the increase of boats and revenue stations, as the only means of affording protection to the government. While the great respectability of the parties making these representations, their high and honorable position, and the zeal which they manifest in protecting the treasury, are amply sufficient to justify the belief that there is great abuse, yet a difference of opinion may be excused as to the By reference to the map of New England, it will be seen that the fishing districts form a succession of bays, islands and promontories, such as it would be difficult to find in any other part of the world. The shores are settled chiefly by fishermen; and the community is bound together by a common interest. It is alleged that during the season when halibut and other fresh fish are in demand, vessels, under cod fishing licenses, run in and dispose of their fresh fish, or anchor about the shores and carry on mackerel fishing, without danger of discovery. The crew are usually interested in the result, or ignorant of the law; and the community, to whom such practices are familiar, consider it fair and proper to take advantage of the government, and dishonorable to become informers. In order to carry out the requirements of the law, therefore, a large annual expense is incurred in keeping up

a system of revenue boats, which is deemed to be a warning to fishermen that they run a chance of being detected in their fraudulent prac-These boats are from eight to ten tons burden, and require two seamen to navigate them, at a compensation of \$25 to \$30 a month. A cook is sometimes added to prepare food for these seamen; and in view of any neglect of duty on their part, an inspector of customs at \$3 a day is put on board, as captain or chief officer. Of course, it depends very much upon the honesty of the inspector how much benefit government derives from the tour of inspection. In bad weather they are not absent long; but in fine weather, when the fishing is good, they are frequently absent for weeks. That these boats ever succeed in detecting fraud, or causing any serious apprehension of detection on the part of fishermen, is at least doubtful. Rumors of such events are sometimes current, but they can always be traced to those wild traditions which prevail in fishing communities. For the prevention of smuggling, the revenue cutters stationed at Boston, Portland and Eastport, with the aid of a few small boats, would be sufficient; and, with all respect for those respectable authorities already referred to, I cannot but think that this large boat service is a greater abuse than any committed by the fishermen At all events, it is quite as demoralizing in its tendency, and encourages an evil of still greater magnitude—that of unnecessarily extending the patronage of the government.

6. When satisfactory proof has been presented to the collector that the requirements of the law have been fulfilled in good faith, the follow-

ing allowance is to be made:

To each vessel measuring more than five and not exceeding thirty tons, \$3 50 per ton.

To each vessel measuring more than thirty tons, \$4 per ton.

To each vessel above thirty tons, and with crews not less than ten persons, and having been exclusively employed in the cod fishery three

and one-half calendar months, \$3 50 per ton.

Whatever advantages the owners may derive from the allowance, it is greatly to be feared that the actual fishermen seldom, if ever, receive any portion of it, either directly or indirectly. It may be argued that, even if the owners receive all the money, the fishermen are equally benefited in the end by larger shares in the proceeds of the voyage. might be the case, if owners were always honest; but all who are familiar with the dealings between that class of men and the seamen from whose labors their profits are derived, must be aware that an advantage gained by the one does not necessarily benefit the other. Even the strongest advocates of the bounty allowance admit that the seamen, for whose benefit it is designed, are usually cheated out of their share. The late assistant collector of Boston, who is thoroughly acquainted with these matters, states, in an official report to the Treasury Department, dated January 7, 1852, that, "notwithstanding all the vigilance of the officers of the revenue, it is quite doubtful if the actual fishermen now derive much if any benefit from the large sums annually paid out of the treasury for fishing bounties." He ardently desires to cherish this branch of industry, and strongly urges the continuance of the bounties, but recommends a revision of the existing regulations, so that the crews, for whose benefit the allowance is designed, may obtain an equitable share. But, in any view, admitting the alleged abuses to be either true or not true, What has been the result of these bounty allowances for the past sixty

years? At the very foundation of the government the subject was fully discussed. Fisher Ames, in a debate in the 1st Congress, spoke of the cod fishery as "a very momentous concern; it forms a nursery for our seamen." And again: "unless some extraordinary measures are taken to support our fisheries, I do not see what is to prevent their inevitable ruin;" "they are very poor; they are in a sinking state; they carry on their businesss in despair." Mr. Elbridge Gerry even threatened that, unless patronized by Congress, our fishermen would be compelled to move to some other country, where they could prosecute their business under protection of government. He spoke of the fishery as "a nursery for seamen," and said it was "with extreme difficulty it continued its existence." In consequence of these representations, Congress granted liberal bounties, and, with the exception of a few years, these bounties have been allowed ever since. What has been the effect? The Marblehead fishermen of the present day state, in their memorial to Congress, that, "even with the aid and protection thus afforded, and an uninterrupted continuance of peace for the last thirty years, many individuals and even joint stock companies, with their capital solely invested in it, have, after a few years' trial of the business, abandoned it, as not affording in the aggregate a saving return for the capital and labor employed." They speak in melancholy terms of the declining condition of the fishery, and ask that it may continue to enjoy the protection of government, as the only means of sustaining a valuable nursery for seamen." Mr. Sabine says, in his able and elaborate report on the fisheries, accompanying the report of the Secretary of the Treasury for 1851-'2, that the fisheries are very important as a nursery for seamen; that they are in a declining condition; that it would be ruinous to withdraw from them the protection of government. He refers to the speeches of Fisher Ames and Elbridge Gerry, and is forcibly struck with "the remarkable coincidence, in many particulars, between 1789 and 1852." There certainly is a remarkable coincidence, as may be seen from the above quotations. fisheries were rapidly declining in 1789, ever since which period, with the exception of about six years, they have been receiving liberal bounties from government; and now, in 1852, they are in the last stage of This is perhaps the least remarkable part of the coincidence.

Having thus glanced at the present condition of the fishery and the regulations prescribed by the department for the execution of the existing laws, it will be well to ascertain, by reference to the legislation which has taken place from time to time on this subject, what was really the original object of these bounty allowances, and to what extent they are

expedient or constitutional.

In the valuable report on the fisheries made by the finance committee of the Senate in 1846, it is clearly demonstrated that the exportation bounty allowed on fish, under the original act of 1789, was designed as a commutation or drawback of the duty on salt, which applied equally to all other kinds of salted provisions, including beef and pork. It was a revenue measure, and all subsequent acts up to 1807 were revenue measures. The report of the committee enters into an elaborate review of all the acts passed by Congress on this subject.

The second act of Congress laying duties on foreign imports, was passed July 4, 1789. By the 1st section, a duty of six cents a bushel was laid on imported salt, seventy-five cents a barrel on imported pickled fish, and fifty cents per quintal on dried fish. Section 4th of same act

allowed, in lieu of a drawback of the duty on the salt used in curing the fish, five cents a quintal on dried fish, five cents a barrel on pickled fish, and five cents a barrel on salted provisions of the United States, exported to any other country. The next act, passed August 4, 1790, prescribes, in the 57th, 58th and 59th sections, the manner of making exportations of articles entitled to drawback, showing exportation to be necessary before bounty on fish and on salted beef and pork, in lieu of drawback, can be paid. Act of August 10, 1790, making further provision for the payment of the debts of the United States, doubled the duty on salt, and at the same time doubled the bounty, in lieu of drawback on fish and provisions. The next act, passed February 18, 1792, is important as the original act by which the foreign system of tonnage bounty was adopted. It changed exportation bounty to an allowance on the tonnage of vessels employed in the bank and cod fisheries. As early as 1790, the fishermen of Massachusetts petitioned the legislature of the State to ask the aid of Congress in favor of their pursuit, and the general court of Massachusetts made representations in accordance with these petitions. Congress referred the matter to Mr. Jefferson, the Secretary of State, for a report; and Mr. Jefferson, on the 2d of February, 1792, reported against adopting the foreign systems of bounties and premiums; showing the advantages enjoyed by our fishermen over all competitors, and expressing his conviction that it was not constitutional for "the fisheries to draw support from the treasury." Act of May 2, 1792, altered and reduced the standard of the bushel of salt, substituting a weighed bushel of 56 pounds, for a measured bushel of eighty-four pounds, and increased the fishing allowance in the same proportion. By the subsequent act of July S, 1792, the duty on salt was increased by eight cents a bushel, making a corresponding increase in the bounties and allowances to fishing vessels. March 2, 1799, an act was passed increasing the bounty on the exportation of pickled fish and salted provisions. The act of April 12, 1800, continued former acts, laying duties on salt and granting bounties and allowances on exported provisions and pickled fish, and the tonnage allowance to vessels in the cod fishery; with a proviso against continuing the additional allowances a longer time than the corresponding duties were payable, in consequence of which they were granted.

Mr. Jefferson, in his annual message of December 2, 1806, recommended the repeal of the salt tax, on the ground that the duties comprising the Mediterranean fund would cease by law at the end of the session, and with it should cease the impost on salt. In conformity with this recommendation, was passed the act of March 3, 1807, repealing the salt duty, and at the same time all the bounties on the exportation of salted provisions and pickled fish, and all the allowances to fishing vessels. It will thus be seen, that from 1789 to 1807 all legislative action on this subject had direct reference to the revenue, and that all measures passed by Congress granting allowances to fishing vessels were strictly revenue measures. Nothing whatever is said about creating a nursery

for seamen in any of these acts.

During the period of six years, from 1807 to 1813, there was no salt tax in the United States, and no bounties or allowances on the exportation of provisions or fish, or to fishing vessels. An attempt to revive the duty on salt, and the corresponding bounties, was made in 1814; but it was not till two years afterwards that an act was passed for that purpose.

The act of July 29, 1813, revived the duty on salt at twenty cents a bushel of fifty-six pounds, and restored the fishing bounties and allowances without restoring the exportation bounty on salted beef and pork. Previous to this date, the beef and pork interests stood upon the same footing with the fisheries, and were equally favored by legislation as nurseries for seamen. This act is still in force, with the exception of the amount of the allowances. It was a temporary war and revenue measure, and had no reference to seamen. The act of February 9, 1816, continues in force that of 1813, and was passed on the recommendation of Mr. Lowndes, as one of the means of extinguishing the public debt. In 1818, the finance committee of the Senate, in reply to a resolution of that body, reported against the expediency of repealing this act, on the ground that the tax on the salt, amounting to \$\$00,000 per annum, after deducting bounties and allowances, could not be spared from the revenue. A similar attempt was made in the House of Representatives during the same session, and was equally unsuccessful. The first act which made any provision on the subject of American citizenship, in connexion with the fisheries, was that of March 1, 1817, which required the owner and three fourths of the crew to be citizens of the United States, or persons not subjects of any foreign prince or state. no prohibition against all being foreigners previous to that date. The act of March 3, 1819, increased the allowances of bounty, and shortens the fishing season. The act of May 26, 1821, provides that vessels exclusively employed at sea in the cod fishery the full time required to entitle them to bounty, and afterwards wrecked, may obtain bounty upon proper evidence of the fact being transmitted to the Comptroller of the Treasury for his decision. Under the act of March 3, 1849, this duty is transferred to the Commissioner of Customs.

This sketch shows the connexion that has always existed between the salt tax and the bounty system since the origin of the federal govern-It has already been shown from the evidence furnished by the advocates of the fishing interests, that in 1789 the fisheries were rapidly declining, and it is now admitted that they are barely able to exist. only reasonable inference is, that the money paid by government to sustain them has not had the desired effect. So well convinced was Mr. Walker, when Secretary of the Treasury, of the impolicy of this tax upon salt and the bounty system founded upon it, that in his annual report of December, 1845, he recommended that salt should be placed among the list of free articles. He stated that a large portion of the duty was exhausted in heavy expenses of measuring, and in large sums for fishing bounties and allowances, both which expenditures would fall with a repeal of the duty, and therefore it could cause no considerable reduction of the revenue. He further contended that salt, being one of the necessaries of life, should be as free from tax as air or water; that it is largely used by farmers and planters, and a tax upon it operates most oppressively upon the poor, not only in the use of the article itself, but as combined with salted provisions.

In conformity with this recommendation, a bill was introduced in the Senate in 1846, for the repeal of the duty on salt. While this bill was pending, Mr. Davis, of Massachusetts, presented a memorial signed by three hundred and twelve ship owners and fishermen of Marblehead against the repeal of the salt tax or the discontinuance of the bounty

allowances, chiefly basing the claim upon the ground that the fishermen of Marblehead had rendered signal service to the country during the revolutionary struggle, and also in the war of 1813. The memorialists stated that the fisheries were in a declining condition, and that without this aid from Congress they could not compete with foreigners, and a great injury would be inflicted upon them by the repeal of the law.

Whether such appeals as this from the owners of vessels to whom the bounty is raid, are to be regarded as offering any legitimate reason why a law oppressive and curdensome to other classes of the community should be continued, remains for Congress to decide. The agricultural population were not backward during the revolutionary war, yet they do

not ask to be rewarded by bounties for their services.

Mr. Benton stated, in the course of the debate, that the business which received bounty from the treasury was in a declining state, while every branch of business left to its own exertions was in a flourishing condition; that this interest employed but a small proportion of tonnage, compared with the tonnage employed in other branches of trade—not more than half the amount possessed by the whalers—those "who double Cape Horn, and go to a distance of twenty thousand miles from any port that they can call their own—who make three years' voyages, and are all that time employed in killing the monsters of the deep." While he would admit a degree of merit in those engaged in the river and coast fisheries, and in the mackerel and cod fisheries, yet they were far below the whalers in point of numbers. Mr. Fairfield, of Maine, advocated the principles embodied in the memorial, and stated, as the reason why bounty was not allowed to whalemen, that none was needed; the business was lucrative, and large fortunes had been accumulated in it. On the 4th of April of the same session, a debate on the same subject took place in the House of Representatives, and the same general reasons were urged in favor of continuing the bounty system. The bill eventually failed; and no attempt to repeal the salt duty has since been made.

From the tenor of these debates, as reported in the Congressional G obe and Appendix, it will be seen that this claim to bounty allowances based, first, upon the services rendered by fishermen during the revolutionary war and the war of 1813; and, secondly, upon the plea that the fisheries are still in a declining condition, and upon the alleged necessity of fostering them by legislative aid as a nursery for American The opposition contend that other classes of the community have rendered equal service to the country; that it is not constitutional to pay out of the public treasury a bounty upon occupation as a reward to one interest at the expense of others, and that a measure which is not constitutional in itself cannot be made so by any collateral advantages that may arise from it. But apart from the question of propriety, it is deemed inexpedient to grant bounties. All experience shows that instead of operating as an encouragement to seamen, this system of rewards has militated against the prosperity of the fisheries, and consequently diminished the usefulness which has been claimed for them as a nursery of seamen.

The nations of Europe afford some striking illustrations of the depressing effects of the bounty system. For more than two centuries the British herring fishery was encouraged by the most extravagant bounties, and it never succeeded in getting into a healthy state till it was left to

In 1789 the duties were remitted upon salt, and a its own resources. high tonnage bounty allowed on every vessel engaged in the deep-sea Many went out, as Dr. Smith has truly stated, not to catch herrings, but to catch bounty. (McCulloch, Dic. Com., p. 687.) such an extent was this abuse carried, that in 1759, when the tonnage bounty was 50s., the almost incredible sum of £159 7s. 6d. was paid as a bounty upon every barrel of merchantable herrings that was produced." (Wealth of Nations, p. 231.) Notwithstanding this extraordinary encouragement, the company by which this fishery was conducted was soon broken up, and in 1794 scarcely a vestige remained of its ever having been in existence. Another company was started in 1786; and it has been well remarked that if every herring caught had a ducat in its mouth, it would scarcely have repaid the expense of its capture. Even the British government could not sustain such an abuse. A similar fate attended the company formed in 1808; and such has always been the result where government has adopted the principle of encouraging the fisheries by premiums and bounties. The advocates of the system cling to it on the ground that it fosters a nursery for seamen. argument is equally fallacious. By making a mere lottery adventure out of what would otherwise be a steady and reliable pursuit, it encourages habits of idleness, diminishes the proceeds of the voyage, and depresses the condition of the actual fisherman for whose benefit the bounty is designed.

The effects of the system have been equally disastrous in the whale fishery. Between 1750 and 1788 the bounties paid by the British government for the encouragement of the northern whale fishery amounted to £1,577,935; and from 1789 to 1824 more than a million pounds sterling—being upwards of two and a half millions expended in bolstering up this branch of industry. (See McPherson's Annals of Commerce, vol. 3, p. 511, and vol. 4, p. 530.) It has been estimated that had the same amount of money been laid out as capital in any ordinary employment, it would have produced £125,000 a year of net profit, or £25,000 more than the total value of the produce of the fishery, without allowing anything for the capital wasted and the ships lost in carrying it on.

(McCulloch's Dic. Com., p. 1410.)

The same has been the result of the system as applied to the Dutch fisheries. All attempts to sustain them by bounties and other artificial contrivances have signally failed. Government has spent millions of money in reducing them to final ruin. An appearance of prosperity has sometimes been created, temporarily, but no branch of industry can be permanently sustained by legislative encouragement. Whatever prosperity may apparently be attained, under such circumstances, must necessarily be factitious.

The experience of the French government has not reversed the principle. Since the revolutionary war, which destroyed the French fishery, high bounties have been granted by government, especially to vessels engaged in the sperm fishery; but this encouragement has failed to produce the desired result. Their ships cannot be forced into the trade, and the number now engaged in the whale fishery is comparatively

small.

Much difference of opinion exists as to the local advantages enjoyed by the American and colonial fishermen in the fisheries of Nova Scotta and Newfoundland; but in the whale fishery there can be no dispute on The great oceans of the world are the common property of mankind, and their treasures are free to all nations. The effect of legislative protection can be fairly tested where there are no exclusive favors of locality, and here we find a most striking illustration. In the prosecution of a pursuit which extends to every sea, and where special privileges are enjoyed by none, it is remarkable that the two most powerful maritime nations of Europe, with all their bounties and premiums, have suffered the citizens of a few small towns in the single State of Massa chusetts to create a whaling marine, which, in the number of men employed, in tonnage and capital, exceeds that of all the rest of the world combined. This has not been the result of mere chance or good fortune; it has not been done by bounties and premiums, or by special acts of legislation, but by patient industry and a judicious combination of labor and capital; by unwearied enterprise in the exploration of remote seas; by that irresistible energy which overleaps all competition, and gives a national character to our people; and, more than all, by that indomitable self-reliance which rises above the aid of government, acknowledges no obstacle, and achieves triumphs that legislators in their wisdom cannot comprehend. The American people understand, by this time, that if the aggregate wealth of the ocean or of the country is not increased, nothing is accomplished by bounties but a transfer of means; and all must acknowledge that it is a direct violation of this principle to tax one maritime interest for the support of another. Every consideration of justice and expediency forbids that the coasting trade or the whale fishery should be compelled to contribute to the support of the cod fishery, on the ground that such a contribution is necessary to foster a nursery for seamen, when it is well known that either of those great interests produces more seamen annually than the cod and mackerel fisheries combined. Mr. Burke has truly said that "it is one of the finest problems in legislation to determine what the state ought to take upon itself to direct by public wisdom, and what it ought to leave, with as little interference as possible, to individual exertion." We have thus seen, from the experience of European nations, and, to some extent, from our own, that if ever there was a pursuit requiring the healthy basis of individual energy, untrammelled by legislation, it is that of "drawing wealth out of the ocean." When government undertakes to prescribe regulations in detail, showing the manner in which fisheries are to be conducted, there is an end to all enterprise. But it may be said, our fishermen possess all the advantages of freedom now; they are not obliged to fish for bounty. In reply to this, I would simply ask, has the history of mankind presented a case, has the experience of the world shown a single instance, in which legislative bounty has been rejected, on any ground of selfinterest or expediency? The recipients of fishing allowances are the last to acknowledge that any decline in their pursuit can proceed from legislative encouragement; yet it is quite certain that, in a time of peace, it can only proceed from a depression of energy, induced by the protection of government, from a scarcity in the products of the ocean which no human power can avert, or from a greater demand for labor and capital in other pursuits.

It is a remarkable anomaly in our history, that from the origin of the federal government to the present period, every effort made in favor

of granting bounties to the fisheries, as a school for seamen, has originated in the fishing districts, whilst other parts of the Union, with equal solicitude for the general welfare, have either silently acquiesced, or opposed the principle as inexpedient or unconstitutional. The natural inference is, that outside of the fishing districts there is a want of patriotic feeling, or an inexcusable blindness to the true interests of the A nursery for American seamen is a national concern; it affects the welfare of all; yet those States which have always stood among the highest in the annals of naval chivalry, which have been ready at all times to sustain our national defences, have never manifested so much interest in maintaining the efficiency of the navy, as to make an original movement in favor of granting appropriations to fishermen. may be argued, that it does not concern them to make original movements in favor of appropriations to be expended by citizens of States over which they have no control; and in this instance, especially, that it is the legitimate business of the representatives from the fishing districts, born and educated among fishermen, and elevated to office in whole or in part by a constituency of fishermen, to judge of the wants of the country at large, and ask for this legislative encouragement. How can people who perhaps never saw the ocean, be supposed to know that our navy is dependent upon the cod fishery?—that this right arm of our national defence will be paralyzed, unless Congress pays out of the public treasury about half a million of dollars every year, to prevent the public from buying cheap fish? War may come upon us; the seas may be covered with the fleets of the enemy; and where, it is asked, are we to find American seamen? Not in our whaling marine; not in our merchant service; not in our coasting trade; - none of these great maritime interests can be relied upon in a great national emergency. nies of our common country are centred in the cod fishery.

Let us see how much sincerity there is in these professions. Patriotic appeals are sometimes resorted to when reason would be of no avail; and although such appeals may indicate a virtual abandonment of the question of justice or expediency, yet they are not unfrequently successful.

The fishermen, and the avowed advocates of the fishing interests, attach great importance to the fact that under the terms of the convention of 1818, between Great Britain and the United States, our fishermen are prohibited from fishing within three marine miles of the shore, and the recent vexed questions respecting the extent of our rights in the fisheries of Nova Scotia and Newfoundland have arisen from the importance attached to the shores and bays. It is to be hoped that the difficulty will be amicably adjusted, and that we may at no distant period enjoy the entire privileges of the provinces; but it is not my purpose to discuss that question at present. The only feature in it to which I wish to call attention is, that the shores and bays are not desirable in the point of view urged by the friends of the bounty system. Mr. Wellman, of Boston, a very intelligent writer on the fisheries and an ardent advocate of the bounty system, says, in an official report to the Treasury Department, that "while our fishermen are compelled to go out on the banks in large vessels, fitted at great expense, and with crews averaging nine men to every twenty tons burden, and extend their voyages for many weeks, the colonists carry on their fishing entirely in small boats, with perhaps not more than two men in each, who return to their shores at

the close of each day's work, and land and cure their fish, which at the close of the summer are laden on board their ships for a foreign market." This is not so great an evil as Mr. Wellman imagines; it has its advantages in making a better nursery for our seamen. As far back as the time of Sir Josiah Child, it was proposed that the houses of the colonial fishermen should be burnt, their boats destroyed, and the boat fish. ery annihilated, as the only means of retaining the banks as a nursery for British seamen. (See Sabine's report, p. 225.) We enjoy the monopoly of the bank fisheries, and therefore the monopoly of this nursery, for which government pays bounty. If the object of legislative encouragement be to foster our maritime interests, a positive advantage results from an apparent evil. The English complain, in a late official report on the fisheries of Nova Scotia, that "the Americans monopolize the deep sea fisheries," and acknowledge that instead of engaging all their energies to compete with us, they look idly on and grumble at our success. (Sabine's report.) Here is additional evidence of the value of the bank fishery. Considering it in the light of a nursery for American seamen, we have reason to congratulate ourselves that our fishermen, who have at heart the interests of the nation at large, are denied the privilege of the shores. Seamanship is an art that is best acquired at It would be well for us, if a school for mariners really be the great consideration, to abandon all we claim under the convention of 1818, and let the colonial fishermen continue in the enjoyment of the shore and bay fisheries. They may possibly undersell us in our own markets, but we have no reason to complain of having fish sold to us at a low price. On the contrary, while we enjoy the benefit of their labor, our young fishermen reap the advantage of experience at sea, and are thus prepared (as the Marblehead memorialists represent) to man our naval and merchant marine. Every effort made for the privilege of the shore, is a blow aimed at this nursery for American seamen; for none will deny that the art of seamanship can be acquired more readily at sea in fullrigged vessels, than on land, in houses. The colonists afford us in the end this additional advantage: that they can never, by any process of shore service, become fit sailors to man British vessels of war; and in proportion as Great Britain overcomes us in the fish market, she will be unable to contend with us at sea. Every victory gained in the grand struggle for supremacy in codfish, will be a naval defeat in future engagements. The English themselves are fully sensible of the advantage we enjoy. Lord Dundonald, in a communication to the London Times in August, 1852, speaks in desponding terms of the "progressive decay and now total abandonment of that once important nursery for British seamen," and says it constitutes "a standard difference of 26,000 sailors against England." His lordship erroneously attributes this advantage to the liberal bounties paid by the French and North American governments. might have seen, by looking into the past history of his own country, that Great Britain presents in her herring and whale fisheries the best possible illustration of the impolicy of bounties; and he might also have seen, by reference to the debate in the Senate of the United States in 1846, that with all the bounties paid by Congress since 1789, our bank fisheries are at this very moment (according to the memorial of the Marblehead fishermen) scarcely able to exist—in fact that they are practically But aside from that, what do our fishermen, who receive these

bounties in view of their future services as fishermen, propose to do? Simply to yield to Great Britain all the advantages of the bank fishery, so strongly urged by themselves, if they can only get possession of the shores and engage in the shore fishery. While in the full enjoyment of the bounty paid by government, their sole aim is to abandon the nursery for seamen, which they contend is indispensable to our perpetuity as a nation, and yield it to the very power whose navy we have most reason to guard against. Is this an example of unusual patriotism, worthy of unusual reward, or is it merely the same instinct of self-interest which prevails among all other classes of the community? If the bounty is designed by government to keep them in the deep sea fishery, and thereby encourage a return in seamen, it is apparent that it has no influence in effecting that object. Government not only expends large sums in an unavailing effort, but in adjusting difficulties arising from their constant struggle to defeat the object for which the bounty is designed. Instead of encouraging them to remain at sea, it induces them to spend a large portion of their time concealed about our own shores in fraudulent practices, and does not in the end keep the n clear of the provincial chores.

The argument that our fishermen will be ruined by the importation of foreign-caught fish, is essentially the doctrine of protection. Our manufacturers were about to be ruined a few years since, if we bought cheap goods from Great Britain. They insisted that government should continue to protect them by imposing prohibitive duties on importations. They even threatened to give up their manufacturing establishments and foreboded ruin to the country, if these great nurseries for American industry were not favored by legislation. The iron interests of Pennsylvania were about to be ruined at the same time by the importation of foreign iron. But the tariff of 1846 has not ruined either of them yet. They are still in very good condition, and growing vigorously. The country is safe, the nurseries are preserved, and our domestic industry

isin a most gratifying state of prosperity.

The same argument was used by a committee of the British Parliament in 1833, and the remedy proposed was substantially the protective The committee attributed the decline of the Channel fisheries to the quantity of foreign-caught fish sold in London, and said it arose from the fact that the French vessels were larger, and had more men and better fishing gear, than the English. Instead of profiting by the example of the French fishermen, and fitting out larger vessels, employing more men, and providing still better fishing gear than their competitors, they devoted their energies to preventing the French fishermen from catching so many fish. The French were underselling them in the London markets; the public were gaining the difference in price; and in order to arrest such an evil, prohibitory regulations were established to put down the French fishery. The means expended in striving to prevent their neighbors from catching and selling fish cheaper than their own, would, if properly directed, have enabled them to gain the ascendency in the fish Nothing more than a diminution of capital is accomplished by such restrictions, and a corresponding increase of prices to the consumer. It is the doctrine of protection, without the pretence of a disguise.

The true remedy lies in superior industry and energy. If our fishermen desire to obtain control of the home market, they must do it by

increased skill and by making a better use of all natural advantages than they have ever made before-not by appeals to Congress for legislative aid. A firm reliance upon their own ability to overcome all competition, and the best use of every legitimate advantage, will be the surest means of accomplishing the object. It has never been found to fail in other branches of industry; and if our fishermen, after a fair trial of the experiment, find themselves unable to compete with foreigners, then it will be to their interest to invest their labor and capital in more profitable The aggregate gain of wealth to the country will enable government to establish a much better nursery for seamen, if it be found indispensable, by increased inducements to American naval apprentices. by free schools of navigation, and by better wages to seamen. merchant service has no right to complain of a want of good seamen: it is perfectly able to take care of itself. Owners of merchant vessels are now receiving enormously high freights, and it is very reasonable that they should pay high wages to their crews. If they are unable to get good American crews, it is simply because they choose to get bad foreign crews cheaper. They cannot expect to receive enormous profits on freights, and pay low wages for good seamen. That, after all, is the true ground of complaint. Let the condition of seamen be elevated by a just and reasonable compensation for their services, proportionate to the increase of wages in every other department of industry, and there will be no reason to complain of a scarcity of American seamen. The same general rules which regulate all trade, apply to seamanship. The highest prices will produce the best labor, and the supply will be governed by the Americans who do not hesitate to penetrate every sea and explore every land, where energy can find a reward, will not hesitate to supply any scarcity that may exist in our commercial or naval marine, nor will they, in case of war, be backward in devoting their services to the defence of their country.

It would be unreasonable to deny that the deep-sea fisheries have their degree of merit as nurseries for seamen, in common with all maritime pursuits; but there is nothing peculiar in the business of cod fishing, and especially in the shore duty which forms so large a part of it, to make better sailors than those produced in the coasting trade, the whale fishery, and the merchant service. Let this bounty be repealed; let these fishermen be compelled to depend upon their own energies like other people, and their pursuit will be successful enough, and probably realize some of the advantages which they claim for it. But the experience of every nation shows that the tendency of legislative protection is to depress individual exertion, and render unprofitable that which otherwise might be profitable. The principle is so well established now, that few will be found to dispute it, unless where local interests are involved. friends of free trade can no longer in good faith sustain the bounty system. In its application to the fisheries, which depend mainly on individual energy, it has been peculiarly injurious; and has always tended to diminish those collateral advantages upon which the protection of government is founded.

> Very respectfully, your obedient servant, J. ROSS BROWNE.

Hon. James Guthrie; Secretary of the Treasury.

Statement showing the number and tonnage of enrolled and licensed vessels, and vessels licensed under twenty tons, employed in the cod and mackerel fishery, in each district of the United States, during the year ending 30th June, 1852.

F. BIGGER, Register.

TREASURY DEPARTMENT, Register's Office, December 1, 1853. Q.

Lease and contract of Bank of Commerce and Bank of the State of New York to the United States.

This indenture, made the nineteenth day of August, in the year of our Lord eighteen hundred and fifty-three, between the Bank of the State of New York, party of the first part, and the United States of America, by James Guthrie, Secretary of the Treasury of the United States, acting under authority of the act of Congress approved March 3, 1853, which provides for the establishment of an assay office in the city of New York, party of the second part, witnesseth, that the said party of the first part, in consideration of the rents and covenants herein contained, hath demised, leased, and to farm let, and by these presents doth demise, lease, and to farm let, unto the said party of the second part and its assigns, the lot or parcel of land now owned and occupied by the said party of the first part, situate on the northerly side of Wall street, in the city and State of New York, and bounded on the easterly side by the property now owned and occupied by the Bank of Commerce, in New York, and on the westerly side by an alley or open space of ground between the banking-house and lot of the said party of the first part and the custom-house, said lot or parcel of ground being thirty-seven feet five inches wide in front on Wall street, and the same width in the rear, and one hundred and twenty or one hundred and twenty-one feet deep; also the equal undivided half, and all the right and interest of the said party of the first part of, in, or to, the said alley or open space of ground: to have and to hold the said lot or parcel of land and the said alley or open space of ground, with all and singular the hereditaments and appurtenances thereunto belonging, to the said party of the second part and its assigns, for and during the full end and term of fifteen years from the fifteenth day of September next, on which day possession is to be delivered to the said party of the second part. yielding and paying therefor the annual rent of twenty-eight thousand dollars, payable semi annually on the first days of January and July in each year; which said rent the said party of the second part covenants to pay to the said party of the first part or its assigns.

And the said party of the first part does hereby grant, covenant, and agree to and with the said party of the second part and its assigns, that the said party of the second part and its assigns shall quietly and peaceably hold and enjoy the said demised premises during the term without the let, hindrance, or disturbance of any person or persons lawfully claiming or to claim the same, or any part thereof; and that the said party of the first part will bear and pay all taxes, charges, and assessments, ordinary and extraordinary, upon the said demised premises during the term. And further, that the said party of the second part and its assigns shall be at full liberty to make any and all such alterations in the buildings now on said premises, and to construct such other buildings thereon, as the said party of the second part or its assigns shall deem proper, provided the value of the buildings on the premises at the end of the term shall be as great as the value of the buildings now standing thereon, saving natural wear and decay and such injuries as the build-

ings may sustain by fire or tempest.

And the said party of the first part does further grant, covenant, and agree to and with the said party of the second part and its assigns, that the said party of second part and its assigns shall have the right, liberty, and privilege of purchasing the said demised premises at any time during the term for the price or sum of two hundred and eighty thousand dol-And further, that in case the said party of the second part or its assigns shall elect to purchase the said premises at any time within two years after the commencement of the term, then interest on the aforesaid price or sum of two hundred and eighty thousand dollars, at the rate of six per centum per annum, from the commencement of the term to the time of making such election, shall be added to the said price; and from the aggregate sum shall be deducted all sums which may have been paid for rent in the mean time; and the balance shall be the price or sum to be paid on making such purchase.

And the said party of the first part does further grant, covenant, and agree, that, on being paid or tendered the price above provided for, it will immediately grant and convey the said demised premises to the said party of the second part or its assigns, in fee simple, with the usual full covenants of seizin, warranty against incumbrances and charges of any

and all kinds, and for further assurance.

It is further mutually covenanted and agreed, that in making such purchase, this demise and everything herein contained shall cease and

determine.

In witness whereof, the said party of the first part has executed this agreement in the manner specified in a resolution of its board of directors, a copy of which resolution is hereon endorsed. And the said party of the second part has executed this agreement by affixing thereto the official seal and signature of the said Secretary of the Treasury.

BANK SEAL. [TREASURY SEAL.] C. W. LAWRENCE, President. R. WITHERS, Cashier. JAMES GUTHRIE, Secretary of the Treasury.

At a meeting of the board of directors of the Bank of the State of New York, held at their banking-house in the city of New York, on the nineteenth (19th) day of August, 1853, the draught of a lease and contract between the Bank and the United States of America was laid before the board; by which lease and contract, when executed, the bank will, among other things, demise its banking-house and lot on Wall street, in the city of New York, to the said United States for the term of fifteen years, at the annual rent of twenty eight thousand dollars, with the right in the said United States to purchase the property on certain terms, which said writing also contains several other covenants and stipulations; and it was thereupon

Resolved, That the bank do make and enter into such lease and contract, with all the covenants and stipulations therein contained, and that the same be executed on the part of the bank by the president and cashier, who shall subscribe their names and affix thereto the corporate

seal of the bank.

It is understood that possession will be given on the fifteenth of September.

Passed unanimously by the board on Friday morning, 19th August, 1853.

I certify the above to be a true copy of the minutes.

R. WITHERS, Cashier.

This indenture, made the nineteenth day of August, in the year of our Lord eighteen hundred and fifty three, between the Bank of the State of New York, party of the first part, and the United States of America, by James Guthrie, Secretary of the Treasury of the United States, acting under authority of the act of Congress approved March 3, 1853, which provides for the establishment of an assay office in the city of New York, party of the second part, witnesseth, that the said party of the first part, in consideration of the rents and covenants herein contained, hath demised, leased, and to farm let, and by these presents doth demise, lease, and to farm let, unto the said party of the second part and its assigns, the lot or parcel of land now owned and occupied by the said party of the first part, situate on the northerly side of Wall street, in the city and State of New York, and bounded on the easterly side by the property now owned and occupied by the Bank of Commerce in New York, and on the westerly side by an alley or open space of ground between the banking-house and lot of the said party of the first part and the custom house, said lot or parcel of ground being thirty seven feet five inches wide in front on Wall street, and the same width in the rear, and one hundred and twenty or one hundred and twenty-one feet deep; also the equal undivided half, and all the right and interest of the said party of the first part of, in, or to, the said alley or open space of ground: to have and to hold the said lot or parcel of land and the said alley or open space of ground, with all and singular the hereditaments and appurtenances thereunto belonging, to the said party of the second part and its assigns, for and during the full end and term of fifteen years from the fisteenth day of September next, on which day possession is to be delivered to the said party of the second part, yielding and paying therefor the annual rent of twenty eight thousand dollars, payable semi-annually on the first days of January and July in each year; which said rent the said party of the second part covenants to pay to the said party of the first part or its assigns.

And the said party of the first part does hereby grant, covenant, and agree to and with the said party of the second part and its assigns, that the said party of the second part and its assigns shall quietly and peaceably hold and enjoy the said demised premises during the term without the let, hindrance or disturbance of any person or persons lawfully claiming or to claim the same, or any part thereof; and that the said party of the first part will bear and pay all taxes, charges and assessments, ordinary and extraordinary, upon the said demised premises during the term; and further, that the said party of the second part and its assigns shall be at full liberty to make any and all such alterations in the buildings now on said premises, and to construct such other buildings thereon, as the said party of the second part or its assigns shall

deem proper; provided the value of the buildings on the premises at the end of the term shall be as great as the value of the buildings now standing thereon, saving natural wear and decay, and such injuries as

the buildings may sustain by fire or tempest.

And the said party of the first part does further grant, covenant, and agree to and with the said party of the second part and its assigns, that the said party of the second part and its assigns shall have the right, liberty and privilege of purchasing the said demised premises at any time during the term for the price or sum of two hundred and eighty thousand dollars; and further, that in case the said party of the second part or its assigns shall elect to purchase the said premises at any time within two years after the commencement of the term, then interest on the aforesaid price or sum of two hundred and eighty thousand dollars, at the rate of six per centum per annum from the commencement of the term to the time of making such election, shall be added to the said price, and from the aggregate sum shall be deducted all sums which may have been paid for rent in the mean time; and the balance shall be the price or sum to be paid on making such purchase.

And the said party of the first part does further grant, covenant, and agree, that on being paid or tendered the price above provided for, it will immediately grant and convey the said demised premises to the said party of the second part or its assigns in fee simple, with the usual full covenants of seizin, warranty against incumbrances and charges of any

and all kinds, and for further assurance.

It is further mutually covenanted and agreed, that in making such purchase this demise and everything herein contained shall cease and

determine.

In witness whereof, the said party of the first part has executed this agreement in the manner specified in a resolution of its board of directors, a copy of which resolution is hereon endorsed; and the said party of the second part has executed this agreement by affixing thereto the official seal and signature of the said Secretary of the Treasury.

BANK SEAL.

[TREASURY SEAL.]

C. W. LAWRENCE, President. R. WITHERS, Cashier. JAMES GUTHRIE, Secretary of the Treasury.

At a meeting of the board of directors of the Bank of the State of New York, held at their banking house in the city of New York, on the nineteenth (19th) day of August. 1853, the draught of a lease and contract between the bank and the United States of America was laid before the board; by which lease and contract, when executed, the bank will, among other things, demise its banking-house and lot on Wall street, in the city of New York, to the said United States for the term of fifteen years, at the annual rent of twenty-eight thousand dollars, with the right in the said United States to purchase the property on certain terms, which said writing also contains several other covenants and stipulations; and it was thereupon

Resolved, That the bank do make and enter into such lease and contract, with all the covenants and stipulations therein contained, and that

the same be executed on the part of the bank by the precident and cashier, who shall subscribe their names and affix thereto the corporate seal of the bank.

It is understood that possession will be given on the fifteenth of September.

Passed unanimously by the board on Friday morning, 19th August, 1853.

I certify the above to be a true copy of the minutes.

R. WITHERS, Cashier.

R.

Circular to collectors, upon their appointment to office, relative to inspectors, &c.

TREASURY DEPARTMENT,
April 1, 1853.

Sin: The President having appointed you to the responsible office of collector of the customs at \_\_\_\_\_, you will please regard that appointment as proof of his full confidence that you will zealously, within the line of your duty, second his purpose to improve the condition of the public revenue in all its branches.

If extravagance in the public expenditures, negligence in the performance of official duty, or other irregularities or abuses, have heretofore prevailed in the custom house at ————, or if improvements of any kind can be introduced into its administration, you cannot too soon enter upon the task of reforming what has been amiss, and introducing a more energetic, vigilant, and economical system. You will have occasion to select and recommend for my approval, inspectors and other subordinate officers of the customs, and your services in the work of reform will necessarily depend in a great degree upon the character of the persons you may choose for that purpose.

It is my aim and wish to infuse vigilance, fidelity, and economy into the public service committed to my care; to appoint the most faithful agents, to compensate them fairly, as far as the law will permit, for the services actually required and rendered, and to supersede all sinecures and persons not fully adented to their proper amplement.

and persons not fully adapted to their proper employment.

With these views, I have to request, in making nominations to fill the offices indicated, you will give me the proper information upon the following points:

1st. The compensation proposed in each case;

2d. The age of the respective persons;

3d. Their present pursuits or occupation; and

4th. The knowledge you have, or opinion you have, of their character for business habits, sobriety, industry, and activity.

Very respectfully, your obedient servant,

JAMES GUTHRIE, Secretary of the Treasury. List of confidential agents appointed by the late Secretary of the Treasury, from September, 1850, to March, 1853.

M. P. Bemis, appointed 20th September, 1850—\$3 per diem, to 20th December.

J. T. Buck, appointed 20th September, 1850-\$3 per diem, to 20th

December.

James Leonard, appointed 26th September, 1850—to depend on results.

Dr. Wm. Noble, appointed 28th September, 1850-\$3 per diem, to

20th December.

Gideon Searl, appointed 3d October, 1850-\$3 per diem, to 20th December.

I. D. Andrews, appointed 7th October, 1850-\$6 per diem, mileage,

and reasonable allowance for clerk hire.

N. P. Tallmadge, appointed 23d October, 1850-\$3 per diem, and 10

cents per mile, continued to February, 1853.

\*R. H. Thayer, appointed 28th October, 1850-\$100 per month, till 1st January, 1851.

T. L. Harris, appointed 28th October, 1850-\$100 per month, to 1st

January, 1851.

H. B. Lathrop, appointed 28th October, 1850-\$1,200 per annum, to February, 1853.

J. H. C. Mudd, appointed 6th December, 1850-\$3,000 per annum.

A. Baker, appointed 20th December, 1850—83 per day, to 20th March, 1851.

Louis Gaylord Clark, appointed 8th January, 1851-\$100 per month,

3 months

James R. Thompson, appointed 18th January, 1851-\$100 per month, 3 months.

Robt. S. Collins, appointed 31st January, 1851-\$100 per month, to 1st May.

Silas M. Stillwell, appointed 6th February, 1851-\$100 per month, to

6th May.

Jos. J. Swift, appointed 5th March, 1851-\$100 per month, to 1st June.

Kennet J. White, appointed 21st April, 1851-\$100 per month, for 3 months.

Bononi Thompson, appointed 19th April, 1851-\$100 per month, for 8 months.

James E. Harvey, appointed 5th May, 1851—\$1,500 per annum, to December, 1852.

A. H. Greene, appointed 9th May, 1851-\$100 for expenses.

Thos. C. Hambly, appointed 20th May, 1851—82,500 per annum, to November 1, 1852.

O. L. Sheldon, appointed 27th May, 1851-\$100 per month, 3 months.

A. H. Wells, appointed 2d June, 1851—\$100 per month, 4 months. Alfred Thomas, appointed 1st August, 1851—\$1,500 per annum, 4 months.

A. H. Greene, appointed 27th September, 1851-\$150 for the service.

Jno.'M. Waterhouse, appointed 9th October, 1851—\$100 per month, for 4 months.

Jno. A. Clarke, appointed 15th October, 1851-\$100 per month, con-

tingent on success.

C. B. Stebbins, appointed 24th October, 1851—\$1,200 per annum. Laurin Dewey, appointed 20th February, 1852—\$100 per month, till August.

N. L. Pitcher, appointed 5th April, 1852—\$100 per month, 3 months. Henry Dimmock, appointed 29th April, 1852—\$1,200 per annum.

Ed. W. McGaughey, appointed 28th June, 1852-\$5 per day.

Levi C. Turner, appointed 30th June, 1852-\$4 per day, to 1st November.

Geo. W. Pleasants, appointed October, 1852-\$6 per day, and 10

cents per mile.

A. H. Greene, appointed 15th October, 1852—\$300 for the service. Ed. W. Johnson, appointed November, 1852—\$1,500 per annum, to 1st March.

Alfred Thomas, appointed 1st December, 1852—\$400 for the service. Jno. G. Camp, appointed 1st December, 1852—\$5 per day to 1st March.

Thos. W. Tipton, appointed 1st December, 1852—\$500, to 1st March. Z. Platt, appointed 1st December, 1852—\$2,000 in all. Samuel Ward, appointed 25th February, 1853—\$1,000 advanced.

#### Circulars to Treasurer and Assistant Treasurers.

TREASURY DEPARTMENT, June 28, 1853.

Sin: Upon application being made to you for that purpose, by any disbursing officer of the government, you will please receive on deposite from him any public money which may be in his hands, and permit him to check out the same from time to time, and in such sums as the public service committed to his charge may require.

Very respectfully, your obedient servant,

JAMES GUTHRIE, Secretary of the Treasury.

## TREASURY DEPARTMENT, July 18, 1853.

Sin: The order addressed to you on the 28th ultime, for receiving the deposites of public officers and permitting them to check for the same, is so far modified as to inhibit the said officers from checking on you for any sum less than five hundred dollars.

The object of this modification is to relieve you from the burden of small transactions, which are the most numerous as well as troublesome, whilst at the same time all the security is provided for moneys in the

hands of disbursing officers which can be required.

In making your weekly reports, you will please accompany each with a list of the officers who may have deposited with you, and the balance at the credit of each at the close of Saturday's business. Very respectfully, &c.,

JAMES GUTHRIE,

Secretary of the Treasury.

To the Assistant Treasurers at St. Louis, Charleston, Philadelphia, and Boston.

TREASURY DEPARTMENT, September 28, 1853.

Sir: Referring to my letter of the 18th July last, upon the request of deposites by public officers, I have now to say, that it is the wish of this department that they should receive all the accommodation in making their disbursements which can be afforded consistently with the attention due to other portions of your duty. The restriction of their checks to sums not under \$500 was intended as a temporary measure, and to prevent an undue pressure on your time, until the business should be

fairly established and tried.

The Assistant Treasurers have never had an opportunity of forming some judgment of the nature of the business, and of the extent of it within the region of their offices; and it is desirable, if possible, that the restrictions should be altogether removed, or if not altogether removed, considerably reduced. In the sub-treasury at New York, where the largest amount of business has been done and will continue to be done, the Assistant Treasurer has already proposed a reduction to checks of \$25; and it is to be hoped, as the number below that sum would of course be inconsiderable, that he will in the end find that he can dispense with any restriction whatever.

The object of this letter is, therefore, to request that you will not impose a higher restriction than \$25, and to impress my hope that you can dispense with any restriction. It is not intended, where a number of payments are to be made at the same time, as in the case of troops or workmen, or pay-rolls, that you should have the trouble of distributing such payments; but, on the contrary, in such case you are

to require the officers to draw the amount of such rolls in gross.

You will please forward, along with each weekly return transmitted, in duplicate, to this department and the Treasurer of the United States, a list of the public officers who have deposited with you, and the amount to the credit of each at the close of the business week or fractional period for which the return is made.

Very respectfully,

JAMES GUTHRIE, Secretary of the Treasury.

V.

## General Instructions.

TREASURY DEPARTMENT, June 15, 1853.

Sin: It is deemed expedient by this department to require certain changes to be made by collectors in the form of their revenue accounts, and in the time at and for which they are rendered. With this view, abstracts are herewith enclosed, marked A, B, which will serve at once to indicate the changes intended, and as forms in lieu of those heretofore used.

1. You will perceive, by the caption of both abstracts, that they are designed for a month, and not for a quarter. These accounts are therefore required, from and after the close of the present quarter, to be rendered monthly instead of quarterly, as heretofore.

2. The first column of abstract A, headed "Date of receipt," is to show the exact day when each payment is made, instead of such payments being distinguished, as heretofore, by the name of the ship, upon

the importation in which the duties accrued.

3. The column headed "Importer," is designed to show the name of the person who pays the duty credited; and the column marked "Description of goods," is designed to give, as fully as may be, the articles chargeable with such duty.

4. The column marked "No. of manifest or entry," is designed to show that such vouchers are hereafter required to be rendered with each abstract to which they belong, and to be entered and endorsed with con-

secutive numbers for convenient reference.

The remaining columns of this abstract, and those of abstract B, are believed to be sufficiently descriptive, without further explanation, of the

entries therein required to be made.

The department desires that these forms shall be fully observed and used in all their columns by all collectors. But as it is supposed there may be some difficulty in the larger districts in filling the 2d, 3d, 4th, 5th, and 6th columns of abstract A, every collector, in whose district there is a naval officer, is allowed for the present, and until further notice, to enter the said particulars or not, at his discretion; but all other collectors are strictly required to insert the particulars indicated in the headings of the said columns.

These forms will in like manner be observed by the surveyors of the

customs, who act as collectors in the collection of revenue.

In districts in which there are deputy collectors at other points than the port of entry, and who make collections and report to the collector of such district, such deputy collectors will, in like manner, observe and use abstract A, in making such reports; and the collector receiving the same, and the duties therein acknowledged, will transmit the abstract of his deputy, with his own, to the department.

The time at which the accounts of collectors, thus modified, are to be rendered, is immediately upon the close of each month. Two days, it is supposed, will be sufficient in the small districts, after the month ends, for closing the accounts and starting them by mail to the department; and in no district, it is hoped, will the time of transmission be allowed

to exceed one week.

I am, very respectfully, JAMES GUTHRIE, Secretary of the Treasury. ---, Esq., Collector of the Customs.

# Instructions to the First and Second Comptrollers of the Treasury and the Commissioner of Customs.

## TREASURY DEPARTMENT, November 21, 1853.

Sir: Having called upon the Register of the Treasury, and the Second, Third, and Fourth Auditors, for statements of the balances outstanding on their books on the 4th March last, including the portion closed by settlement or collection since that time, these officers have furnished statements for the several branches of the public service, the accounts of which are registered and kept in their offices respectively.

From these statements it appears that there remained unsettled on the books of the Register, on transactions subject to settlement in the office of the First Auditor of the Treasury, balances amounting to

- \$73,444,715 26

In the office of the Fifth Auditor, balances amounting

12,245,095 95

In the office of the Commissioner of the General Land Office, balances amounting to	\$1,326,293 09
On the books of the Second Auditor, relating to the War Department, balances amounting to	796,015 21
On the books of the Third Auditor, also relating to the War Department, balances amounting to	8,106,110 41
On the books of the Fourth Auditor, relating to the Navy Department, balances amounting to	5,662,406 45

Making in all - \$101,550,636 57

over and above the sum of \$30,474,448 07, closed by settlement or collection since the said 4th March.

These statements are herewith respectively transmitted for your con-

sideration and action thereon.

The fact of this large amount of money open on the books of the Treasury Department, and the looseness and irregularity it implies, are very unsatisfactory, and must be remedied. They lead to the presumption of defects in, or the entire want of system for, the management of the business, and call imperatively for the adoption of a proper system, and for active and vigilant proceedings under it, to secure the rights of the United States involved in said balances. If a perfect system can be devised and put in operation, and proper efforts made by the officers of the department, I cannot doubt that an effectual change can be brought about in a state of the accounts so discreditable.

From the best examination I have been able to give to these statements, I conclude that, besides the current advances in the course of expenditure, a large portion of the balances might be settled and closed without difficulty, if the proper steps are taken to obtain the accounts and vouchers upon which the settlements depend. For another large portion suits have heretofore been directed, and are in the course of prosecution under the decision of the Solicitor. And there is another portion, in which, from the time the balances have been on the books, there can be but little prospect now of ever realizing anything from them. But there is another large portion, which, it is believed, may be collected by proper exertions, explanations and appeals, if the business is zealously undertaken, and without harassing the parties with suits, or subjecting them, or the United States, to costs.

As to the first-mentioned portion of these balances, it is not only derogatory to the government, but unjust to individuals, to keep alive balances against them on the books, which are not really due; and, as to the last, on which money is due, to neglect, from year to year, to make demand, and urge and enforce payment, is but to encourage de-

falcation and peculation upon the public treasury.

The tenth section of the act of 3d March, 1817, entitled "An act to provide for the prompt settlement of public accounts," provides that "it shall be the duty of the First Comptroller to superintend the recovery of all debts due to the United States, to direct stits and legal proceedings, and take all such measures as may be authorized by the laws to enforce the prompt payment of all debts due to the United States."

The second section of the act of the 15th May, 1820, provides, in the case of any collector of the revenue, receiver of public money, or other officer, who shall have received public money before it is paid into the

treasury of the United States, and who shall fail to render his accounts. or pay over the same in the manner or within the time required by law, that it shall be the duty of the First Comptroller of the Treasury to cause to be stated the account of such collector, receiver of public money, or other officer, exhibiting truly the amount due to the United States, and to certify the same to the agent of the treasury. And the third section of the same act provides, in the case of any officer employed, or who has heretofore been employed in the civil, military, or naval departments of the government, to disburse the public money appropriated for the service of those departments, and who shall fail to render his accounts, or to pay over in the manner and in the times required by law. or the regulations of the department to which he is accountable, any sum of money remaining in the hands of such officer, that it shall be the duty of the First or Second Comptroller of the Treasury, as the case may be, who shall be charged with the revision of such accounts, to cause to be stated and certified the accounts of such delinquent officer to the agent of the treasury.

The twelfth section of the act of 3d March, 1849, provides for the appointment of an officer in the Department of the Treasury, "to be called the Commissioner of Customs, who shall perform all the acts and exercise all the powers now devolved by law on the First Comptroller of the Treasury, relating to the receipts from customs, and the accounts of collectors and other officers of the customs, or connected therewith."

It follows, from these several provisions of law, that the duty therein prescribed, of causing the accounts to be stated, exhibiting truly the amount due to the United States, devolves—

1st. In respect to all receipts from the customs, and to the accounts of all the officers thereof, upon the Commissioner of Customs.

2d. In respect to accounts for all other receipts or advances in the civil department of the government, upon the First Comptroller of the Treasury.

3d. And in respect to accounts for receipts and advances in the military and naval departments, upon the Second Comptroller of the Treasury.

The duty of causing the accounts to be stated, "exhibiting truly the amount due to the United States," implies more, in my opinion, than the mere present or clerical statement of the account. It comprehends the supervision of all the preliminary steps which are usual and necessary to fix and ascertain the true condition of the debt, and the propriety of instituting suits; and it especially includes the transmission of the accounts to the individuals, and the consideration of their objections and vouchers, as a means of arriving at that condition. An explanation of the accounts, and an appeal and demand for payment, is due to every person before he is visited with the annoyance and discredit of a suit.

The responsibility of seeing that these preliminary measures are taken, rests with you; and the probability is, that if they are properly pursued, and immediately upon the defaulting officer going out of service, a resort to suit would rarely be necessary. Whenever it becomes indispensable, the preliminary correspondence would furnish information of the residence of the parties, their circumstances, and the defence, if any, likely

to be made.

In this connexion I must call your attention to the penal provisions of the Independent Treasury act, and request that they may be invoked

in every case of default in which they may be proper, and not barred by

the statute of limitations.

I have also to call your attention to the provisions of the act of 25th January, 1828, to prevent defalcations on the part of disbursing officers. and for other purposes, and to request that you will enjoin on the several auditing offices, and observe in your own, an exact attention to the restrictions contained therein.

With these views on the subject of this large debt, I have to request that you will respectively prepare, as soon as may be, the proper directions and instructions to the several Auditors, including the Commissioner of the General Land Office, whose accounts you revise, to proceed forthwith in the business of settling up and closing the accounts and balances in question. The instructions should require each of the auditing

officers-

1st. To open a docket of all the outstanding debts of officers and others out of service, the settlement of which appertains to his office, and to add to the docket, from time to time, the names and balances of others, as they may go out of office, or cease to receive or disburse. For this purpose, notice of these changes in office will be requested from the proper departments, and will be communicated to the proper Auditor by you, as received.

2d. To transmit immediately to the persons indebted, statements of their accounts, to explain the items in dispute, to demand and urge payment, and to ascertain, in the event of failure, their residence and circumstances, or, in the event of their death, of their estates and their

legal representatives.

3d. In the event of inability to collect, to report the case to you, with the steps taken, and the information collected, to enable you to decide upon the propriety of instituting suits, or criminal proceedings,

as the case may be.

4th. To make to you a report, at the end of each quarter, to be submitted to this department, of his proceedings, showing the number and amount of such debts on hand, the amount added during the quarter, and the amounts closed by settlement, or collection, during the quarter.

In communicating these orders and instructions to the auditing officers, you will please impress those officers with the great importance attached to the duty in hand, and to the necessity of their prosecuting it with energy and judgment.

I am, very respectfully, your obedient servant,

JAMES GUTHRIE, Secretary of the Treasury.

ELISHA WHITTLESEY, Esq., First Comptroller of the Treasury.

J. M. BRODHEAD, Esq., Second Comptroller of the Treasury.

H. J. Anderson, Esq., Commissioner of Customs. Y.

## Instructions relative to duty bonds.

TREASURY DEPARTMENT, September 9, 1853.

Sir: I enclose, herewith, a copy of a letter from the First Auditor of the Treasury, and of a statement enclosed in said letter, of the amount of bonds taken for duties in the several collection districts, which remained uncollected and outstanding on the 30th June, 1853. The whole amount is \$6,292,776 05; the several amounts composing which, for the respective districts, now stand as debits in the accounts, generally, of the present collectors, having been carried, by merely formal entries, from account to account of succeeding collectors, without there being any actual liability on their part, and without any practical benefit to accrue for such accounting to the United States.

On the contrary, the Auditor states, that much trouble and waste of time is incurred in repeating these pro forms entries in the current accounts of collectors, as they are adjusted and stated in his office, from month to month, and that much confusion, trouble, and delay take place in tracing out and entering the proper credits arising in them, whenever casual collections are made on account of these old bonds, and the money is paid in, and reported by district atterneys or marshals

to the treasury.

I agree entirely with the opinion of the Auditor, that these bonds should not be retained, as useless and unmeaning items, in the accounts of collectors; not only for the reasons stated by him, but because they serve to mystify and conceal the true condition of these accounts; and because, as they are not true in their import, nor binding in fact or law, the implications they involve are inconsistent with all sound and correct

principles of accounting.

I have therefore to request you to instruct the Register, in the first place, to open general accounts of these bonds on the books of the treasury, charging it with the amounts outstanding in each district, and crediting the collector for such district to whom such amount now stands debited; in the second place, to open a register of these bonds, under the head of each district, showing the date and amount of each bond, the principal debtor and sureties, when it fell due, and the name of the collector by whom said bond was taken; and, lastly, to ascertain and note in said register the true condition of each of said bonds—whether the debt has been released or compromised, or judgments in the cases had against the United States, with the dates, &c., of such acts, so that the said register may become a permanent record and book of reference, to show, at all times, what bonds have been paid, released, or lost, and what remain due.

I am, very respectfully,

JAMES GUTHRIE, Secretary of the Treasury.

H. J. Anderson, Esq., Commissioner of Customs.

## Report of the Third Auditor.

TREASURY DEPARTMENT, Third Auditor's Office, October 31, 1853.

Sir: In addition to the report made to you in my last respecting the condition of this office, I have the honor to state, that when I took charge of the office, on the 25th of April, I found some of the most important branches of it greatly in arrear. Upon examination, I at once discovered that the force employed, (78 clerks,) if properly arranged, was adequate not only to bring up the work, but to keep it up; and having considered the plan of dividing the office into branches, and finding it, if properly carried out, one of great practical utility in the despatch of business, and promotive of the best results in the administration of its affairs, I determined to continue it. It is now composed of seven regular and distinct divisions, with the necessary auxiliaries. Each division has a principal accountant or chief, who has charge of all the books and accounts pertaining thereto, and conducts and supervises the correspondence emanating therefrom. The branches are designated as follows: first division, the bookkeepers'; second, quartermasters' department; third, subsistence department; fourth, pension department; topographical engineers department; sixth, miscellaneous department;

and, seventh, soldiers' claims and bounty land department.

In the reorganization of the office under the act of the 3d of March last, I arranged the branches with a strict eye to efficiency and the despatch of business, having in view at the same time the suitableness of each clerk for the branch to which he was assigned; and, although the chiefs of each have in a greater or lesser degree labored under the serious disadvantage of instructing and teaching a large proportion of the force assigned them, the beneficial results of the course pursued, under strict discipline, will be manifest on an examination of the following facts in detail, and which will go to show that the work of the office has not only been brought up, but that it is now in a healthy and efficient state, by which the interest of the government will be promoted, to the end that the outstanding balances, many of which are large, may be recovered to the treasury, and that in future, by the prompt settlement of the accounts as they are rendered, prevent large balances from remaining in the hands of the officers and agents who have ceased to disburse—a practice, I have discovered, that has been of too long standing for the public good.

The bookkeepers' division, although amply supplied with work from the various branches, still maintains the utmost promptness, in affording the necessary facilities in the settlement of the accounts. The books of this branch number thirty-nine heavy ledgers, and forty-nine journals, representing the monetary transactions of the government, connected with this office, from the year 1791—a period of sixty-two years.

In the quartermasters' division, from the 25th of April to 30th of October, 1853, there will have been reported for the revision of the Second Comptroller, three hundred and eighty eight separate settlements of accounts. From that period until about the 1st of June, there was considerable confusion naturally consequent upon a change of administration of the head of the office: numerous changes took place by removals, new appointments, and resignations, of which this division had its full share. This caused almost a suspension of effective work, and it was not until the 1st of June that the division was arranged upon its present plan. Then again, on the 1st of July, came the classification under Mr. Hunter's bill; and a good deal of time was taken up in the examination of the clerks, during which very little was done. After the division was fairly organized, it suffered much from sickness and unavoidable absences among the members. These matters are mentioned to show the drawbacks and hindrances to which it has been subject, and that in placing a fair estimate upon its work a period anterior to the 1st of June should not be resorted to. On that day there were unsettled in this office 1,028 quarterly money and property accounts of the disbursing officers of the Quartermaster's department, some of them extending back to the year 1847, the middle of the Mexican war, and which had remained in the office unsettled for five years. Besides these, there was a vast accumulation of unsettled property accounts, unaccompanied by those of money disbursements, some going back to the year 1836, and which had been in the office for more than fifteen years. As soon

as I ascertained the condition of the division, its whole efforts were directed to a speedy settlement of those accounts, heretofore the longest neglected; and I have the satisfaction of saying that those efforts have been so far successful, that at this time there is no account that could be disposed of older than the third quarter of 1852, the beginning of the fiscal year 1852-'3, that has not been settled. In addition, there are many which have been settled up to and including the second quarter of 1853, the end of that fiscal year. The work may be stated as follows: From the 1st of June to the 31st of October, 1853, there will have been reported, for the revision of the Second Comptroller, three hundred and forty nine settlements, each including from one to fifteen quarterly accounts. The monthly settlements being—

Besides these, the whole arrearage of property, unaccompanied by money accounts, with the exception of a few for the 2d and 3d quarters of 1853, has been brought up—a wo.k of no little magnitude, when it is considered that relative thereto there were written no less than 500 official letters, besides the labor of the settlement. Since the 1st of June, 1853, there have been received for settlement in the office 232 quarterly accounts, many of which are now settled. The number of disbursing officers who render quarterly accounts is 170, and the number of accounts remaining unsettled is only 112: these are generally small, the leading and heaviest having been already disposed of, and none, as has been before observed, are older than the 3d quarter of 1852.

Before the meeting of Congress, I am perfectly satisfied that there will not be a solitary account, that ought to be, that will not have been disposed of—a state of the department which has not been known in this office for the last seventeen years. From the aforegoing, I trust, sir, that you will view the condition of this division as satisfactory. No effort has been or will be spared to make it entirely so, and many improvements are in contemplation which will be suggested in due time.

In the subsistence branch there has been, for the last six or seven years, a force generally employed of six clerks; with this force the work has been accomplished with satisfaction to all parties, owing to the excellent system adopted for conducting the business of this branch previous to its being committed to my charge, and which has been continued. A rigid accountability for all money or property, of whatever kind, received by officers and agents of the Commissary department, has always been maintained; and, notwithstanding the increased business thrown upon it by the Mexican war, I do not know of a single instance where the current business of this branch was delayed, or where an officer has left dissatisfied by the want of prompt action and

courteous attention on the part of the clerks in this branch of the public service.

In consequence of the pressing calls of volunteers, officers and others, for an immediate settlement of their accounts at the close of the Mexican war, and their going out of the service, there was, of necessity, a postponement of many accounts which could be delayed without detriment to the public interest. This postponed work was in process of final examination, when, in the beginning of 1851, nearly the whole force of this branch was taken for other duties, leaving but three clerks to execute the current and pressing business until September, 1852, when three additional clerks were detailed, two of whom had the duties to learn. With this force (the head of the branch and five assistants,) the back work was being gradually brought up, until the 4th March, 1853: since that period, and in consequence of the increased impetus given by the new and more perfect organization of the force of the whole office, business has been very materially advanced. There have been audited since the 4th March last some 264 different accounts, involving from one to eight All of the accounts reaching back through the year 1851 have been taken up and audited. A large majority of the accounts of 1852, and many of 1853, have been likewise audited, and admitted, and certified, by the Second Comptroller; so that at the present time there are about 150 officers' accounts on file in the subsistence branch, unsettled. All these accounts are included in the years 1852 and 1853, and none go beyond the 2d quarter of 1852. Many are delayed for papers necessary to their final adjustment, which have not yet reached the office. This branch may be fairly stated to be in a healthy and forward state, and ready, at any moment, to meet every call upon its labor contemplated in its establishment.

To the fourth division are assigned the keeping and settlement of all the pension agents' accounts, and the pension claims payable at the treasury, under the acts of 6th of April, 1838, and 23d of August, 1852, involving an annual expenditure of from two to two and a half millions of dollars.

The business of this branch has seldom been in arrears. of March, however, owing to the transfer of two of its seven clerks to the engineer and bounty land branches, to aid them in their exigencies, the business had fallen in arrears. On that day there were 45 pension agents' accounts and 12 pension claims unsettled: to these were added, as they were received, between the 4th March and 1st October, 120 agents' accounts, and 346 claims; making in all 523, only 84 of which were disposed of prior to the 25th of April. Under the new organization of the office, the force of the branch was increased to seven clerks, under an assurance that all arrears should be "brought up" and settled by the 1st of October. By the closest application and attention to business on the part of the clerks employed, that promise has been fully redeemed: every account and claim on that day was either settled or reported upon. On the same day, however, the 3d quarter's accounts became due, and during the month 38 agents' accounts and 57 claims were received: of these all the claims have been reported upon or settled, and 11 of the agents' accounts. Thus it will be perceived that from the 4th of March to the 31st of October, 176 pension agents' accounts and 415 pension claims, in all 591—84 of which only were disposed of prior to the 25th of April—have been settled or reported upon, leaving, of those received in October, 27 agents' accounts unsettled. During the same period there were received S63 letters on business connected with the branch, and S52 written. Of calls for information from the Pension Office, which have been received and answered during the same period, there are estimated to have been answered 2,780, only 300 of which were dis-

posed of prior to the 25th of April.

In the fifth division, the engineer and topographical engineer accounts, it will be seen from the following details that the number of quarter yearly accounts which had been referred to this office for adjustment, within the periods stated, consisted: 1st, of the number on file and adjusted on 23d April, 1853, 253; 2d, of the number received from the 23d April to the 31st October, 1853, 202-making in all, total received 455. It will also be seen that there have been adjusted and reported to the Second Comptroller as follows, viz: 1st, of those on file on the 23d April, 1853, 238; 2d, of those received between 23d April and 31st October, 1853, 160-making a total adjusted, of 398. And that there now remain on file and unadjusted the following: 1st, of those on file on 23d April, 1853, 15; 24, of those accrued between 23d April and 31st October, 1853, 42—making a total now on file, 57. number now on file the adjustment of 40 accounts has been advanced as far as the information furnished with them admitted, and the final adjustment of them, therefore, can be readily effected when the further information called for shall have been received; and the remainder (17) may be said to comprise the number of accounts now on file, in the adjustment of which no progress has been made.

This result is consequent mainly upon the greater number of clerks employed, detailed temporarily from other divisions of the office, and partly from their increased efficiency, resulting from experience and diligent attention to business. The efficiency here spoken of may be considered still progressive, and justifies a confident expectation that the small number of accounts now on file will be speedily adjusted, and that those required to be rendered at the expiration of each quarter will be promptly disposed of as fast as received. No doubt is entertained that this may be done, notwithstanding the greatly increased number of accounts resulting from the numerous appropriations for harbor and

river improvements.

In the sixth division, (miscellaneous branch,) the chief, with his assistants, have been assiduously occupied in careful investigation of, and in relation to, the claims under their charge; in making awards in cases sufficiently established; in preparing reports, describing, as to other cases, the difficulties preventing the allowance thereof, as exhibited, and the kind of additional evidence requisite to be produced as to such of them as may apparently be rendered admissible, and in answering all applications as to the claims offered to this branch. Of these applications a register is kept, in which is entered each claim, the date of its reception, the name of the claimant, and also the name of the attorney or others authorized to prosecute the claim, its object fully noted, and when attended to. By this register it is found that from the 11th of March, 1853, to the present time, the average number of separate applications being 168, many of them singly relating to various claims, and requiring to be answered, have been referred to this branch; and the records of the awards, reports, and correspondence, exhibiting the

result of the investigations within this period, including all claims of a miscellaneous character, are found to fill some 400 pages, closely written, of large volumes. It is only in this general way that the condition of the business of this branch of the office can be clearly shown, unless by recourse to the papers in the thousand of cases in detail, to learn the action in each case; a procedure that would require a great length of time.

Claimants, and their agents or attorneys, rarely consider claims as finally decided whilst remaining unpaid. The case may have been actually disallowed as unprovided for by law, or on other grounds, or suspended for want of adequate evidence remaining unfurnished, and still be the subject of often reiterated applications through members of Congress or others; and often failing in success through one, try again through another. Even payment does not always put an end to them. In numerous instances in the last four years, claims have been sent on, with modern affidavits in their support, as to losses during the war with Great Britain, the Seminole campaign of 1818, the Black Hawk war, the Florida war, and the late war with Mexico, for which remuneration has been discovered to have been received long ago. Much time is unavoidably consumed in the searches as to such cases, and in answering

the many applications respecting them.

The claims yet remaining unreported upon are believed to be principally in the names of Missouri mounted volunteers, and are very numerous Many of the claims of the volunteers of that State have been investigated and reported upon, to members of Congress and other applicants, and the reports manifest the difficulties in which, on various grounds, the same are severally involved. At an early period it was discovered that the claimants in that State had generally obtained many payments from the paymaster, in lieu of forage, to which they were not entitled by law, and to the allowance of which the paymaster had been led by incorrect entries on the muster-rolls. Their losses are chiefly ascribed to failures on the part of the United States to furnish sufficient forage, and those failures were caused by the impracticability of procuring forage in most of the places where the Missouri volunteers were on duty, and the United States could not be rightfully called upon to pay both for the forage they failed to supply, and for the horses too; the losses of which resulted from the failure. The laws under which the payments in lieu of forage were made, authorized them in no other cases than those inwhich the volunteers furnished the forage themselves; and if they had in fact so done, they could not have sustained losses by reason of the non-supply of it, nor, consequently, have had claims in respect to such

In many instances the payments exceed in amount the valuation of the animal; and in others, the payments so affected the claims as to leave very little allowable on them, even if unobjectionable in other respects. Under the circumstances, the agent concerned for many hundreds of the claimants signified that he wanted no more reports, as further legislation was contemplated, which would obviate all such difficulties, and in February, 1850, a bill designed for the purpose is shown to have been introduced in the House of Representatives by the Hon. J.S. Phelps, and to have been referred to the Committee on Military Affairs. At the following session it appears to have been reported by the committee, and passed

by the House with sundry amendments, but has not yet become a law. Hence the investigations of the claims of Missouri volunteers, except in instances in which reports were specially called for, were postponed, in order that others, more urgent, might be attended to. Since the last adjournment of Congress the agent alluded to has applied for reports in particular cases, which have been prepared and furnished; and has also expressed a desire for reports on the cases generally, in which he is concerned, and these will be acted upon without avoidable delay. testimony adduced in support of the claims of the kind in question is all ex parte, and cannot in many instances with safety be trusted: it demands, therefore, very careful and scrutinizing investigations, with recourse to every sort of documentary evidence likely to afford information affecting it in every instance; and in progressing with the work, since the presentation of the aforesaid report of the 1st of January, 1850, the chief of the branch has found abundant causes for the apprehension it shows him to have then entertained.

The duty of investigating cases, and of preparing the awards, reports, and correspondence in relation thereto, is a very arduous one, and pressing, as it necessarily must, the supervision of the head of the branch; and independent of this duty, occasionally, and not unfrequently, there is assigned to the chief and his assistants, for examination and reports, in consequence of calls of committees of Congress and the heads of departments, old miscellaneous war claims, in the contractors', commissary and quartermasters' departments, generally very intricate, as well as important in their amounts or principles, and requiring very extensive searches in various sources, and the preparation of reports of great length, which do not appear on the books before mentioned, but are recorded in the others appropriated to the general business of the office.

The soldiers' claims and bounty land branch I found considerably in arrears, and immediately made such arrangements with regard to it as to insure its being brought up, and that desired end has been accomplished. Any claim that may now be presented can be acted upon and disposed of without any other delay than the time required in making the necessary examination. On this branch thirty four clerks have heretofore been employed; but as that number was found unnecessary, by the diminished number of bounty land cases under the act of September 28, 1850, the force has been gradually reduced by transfers to other branches and employments, until ten clerks have been, for the last three months, found sufficient to keep the work in perfect control.

Since the 25th of April last, upwards of sixteen thousand bounty land cases, with seven hundred and thirty invalid and half-pay pensions, have been examined and certified to the Commissioner of Pensions, and nine hundred and thirty soldiers' claims for arrears of pay, bounty, &c.,

have been examined and disposed of.

Before concluding this report, it is but justice to the gentlemen engaged in this bureau, that I should bring to your attention the manner in which they have discharged the duties assigned to them, since it came under my control, in the arduous labor of bringing up the heavy arrearages of business which we found in the bureau. I have been met and supported by the accountants and clerks in a manner worthy of all praise: to patient and untiring industry they have brought a zeal for the public interest, which has contributed in a great degree to the satisfac-

tory condition in which the business of the office is now shown to be. To give an illustration of the spirit which pervades the whole corps of the burcau, I will state one fact: the quartermasters' branch, which is the only one in which the business is not settled up as near to the day as the security of the public interest would justify, and which has failed to realize my anticipations only because of the protracted illness of some of the best clerks on it, have, with but one or two exceptions, voluntarily agreed to work three extra hours each evening, in order to close the settlements on that branch. I feel confident that, by the meeting of Congress, every account on this branch, that is in a condition to be settled, will be disposed of.

With great respect, your obedient servant, F. BURT, Third Auditor.

Hon. James Guthrie, Secretary of the Treasury.

TREASURY DEPARTMENT, Third Auditor's Office, October 29, 1853.

#### AB.

Report of the Third Auditor, with supplemental report.

TREASURY DEPARTMENT, Third Auditor's Office, November 12, 1853.

Sir: I have the honor to transmit to you herewith, a report made to me this morning by Mr. Walter H. S. Taylor, chief of the quartermasters' division of this office, where he communicates the pleasing information that the business of that branch has been brought up in anticipation of the time fixed, by the 1st of December next; and as evidence of the satisfactory manner in which the accounts have been settled, I beg leave to refer you to the enclosed copy of a letter from Major Morris S. Miller, one of the most experienced quartermasters attached to the army, and largest disbursing officers in California.

With great respect, your obedient servant,

SÁMUEL S. RIND, Acting Auditor.

Hon. James Guthrie, Secretary of the Treasury.

FORT READING, CALIFORNIA, Cotton Wood Post Office, September 28, 1853.

DEAR SIR: In acknowledging the receipt of your sheet of difference relative to my quartermaster's accounts, I cannot refrain from expressing my appreciation of the improvement in the system adopted in that statement. It is the most intelligible sheet I have ever received relative to my quartermaster's accounts, although I have been disbursing since 1836. It is true, there are some items in it which I have not the data to comprehend; they are noticed in my official letter, but the improvement is so apparent, that I cannot refrain from noticing it. If your system is continued for a few years, the disbursing agents accountable to your office will be able to reconcile the balance declared by the Third Auditor with those of their own accounts-current. This has been hitherto an impossibility, at least as far as my experience goes.

The sheet of difference has been a "bug-bear," and has been known under the soubriquet of "sheet of difficulties." The simple form adopted by you will soon enable those accountable to you to understand exactly how their accounts with the treasury are, and allow them to explain to

their bondsmen the apparent discrepancies.

The principal difficulty of the disbursing quartermaster has hitherto been to keep the account of the transfers between the Second and Third Auditors; this has been augmented by the proceeding hitherto adopted, of settling, on the 1st January, (for instance) 1850, accounts for 1847 and '48, and charging to the officer all amounts received in '49, making the balance erroneous, as the sheet of difference purported to be a settlement including only '48. Your sheet is what it ought to be, and you merit the thanks of every disbursing officer; and I take the liberty of

writing you unofficially, although a stranger, to acknowledge the benefit received by the alteration.

I am, very respectfully, yours,

MORRIS S. MILLER, Captain, A. Q. M.

To the THIRD AUDITOR U. S. TREASURY.

#### AC.

Proposition to modify Second and Third Auditors' offices.

WAR DEPARTMENT, Washington, November 9, 1853.

Sin: I desire to draw your attention to the inconvenience and disadvantages arising from the present distribution of the accounts of

this department between the Second and Third Auditors.

The accounts of the recruiting service, pay department, medical department, and ordnance department, are adjusted by the Second Auditor. Those of the subsistence, engineer, and topographical departments, are adjusted by the Third Auditor, while those of the Quartermaster's department are divided between them.

The greatest practical inconveniences of this distribution fall upon the Quartermaster's department, and are strikingly set forth by the Quartermaster General, in a memorandum herewith transmitted, in which it is stated that not only different vouchers in the same account, but different items in the same voucher, have to go to different Auditors; and that if a tent be fitted up for the accommodation of the sick, one portion of the property must be accounted for to one Auditor, and the remainder to the other.

As all the accounts of each of the other branches of the service are settled by one or the other of the Auditors, the same inconvenience is not felt in any of them, to the same extent; but it frequently happens that officers are called on to make disbursements for other purposes than those particularly assigned them; and in such cases the difficulty above referred to may occur. The principal objection, however, in these cases, to the present system, is the absence of that check afforded by submitting all accounts to the same supervision, and the possibility that an allowance might be drawn, or payment might be made, in one form through one Auditor, and in another form from the other.

I think, under these circumstances, that the interest of the public service, and the convenience of the department, would be promoted by submitting all its accounts to the same Auditor. In addition to the accounts of this department, the Second Auditor has those of the Indian Bureau, and the Third Auditor those of the Pension Bureau, besides several classes of miscellaneous claims; and it seems to me that the accounts of both these branches of the Interior Department might be properly intrusted to one Auditor, and those of this department to the other.

Very respectfully, your obedient servant,

JEFFERSON DAVIS,

Secretary of War.

Hon. James Guthrie, Secretary of the Treasury.

## Memoranda of the Quartermaster General.

1st. By an act of Congress of the 28th March, 1812, the Quartermaster's department, which had been disbanded in 1802, was re-established, and the department of Purveyor of Public Supplies was substituted by that of Commissary General of Purchases. (Hetzell's Military Laws,

139, 140, and 141.)

2d. By the 5th section of an act of Congress entitled "An act the better to provide for the supplies of the army," &c., approved 3d March, 1813, the Secretary of War was authorized and directed to define and prescribe the species, as well as the amount of supplies to be purchased by the Commissary's and Quartermaster's departments, and the respective duties and powers of the said departments in relation to those supplies.

3d. Regulations were prepared, in obedience to the law.

4th. The fuel, forage, straw, stationery, and all means and materials for transporting or quartering the troops, were to be purchased or provided by the Quartermaster's department, and all appropriations for the purchase of the means and materials, or payment for the services connected with those several objects, as well as the appropriation for contingencies, were to be disbursed by the Quartermaster's department.

5th. The purchase and providing of clothing, camp and garrison equipage, &c., was assigned to the Commissary of Purchases, with the

disbursement of the appropriations required.

6th. The 9th section of an act of Congress for organizing the general

staff, recognises the regulations made by the Secretary of War.

7th. An act to provide for the prompt settlement of accounts, approved 3d March, 1817, (Hetzell's Military Laws, 193, 194) authorizes the appointment of four additional Auditors, and provides that the Second Auditor shall settle all accounts relative to the clothing of the army and the contingencies, &c.; and that the Third Auditor shall settle all accounts of the Quartermaster's department, &c., and all accounts of the War Department, other than those provided for.

8th. All the officers of the Commissary's department, except the Commissary General and two storekeepers, having been disbanded, Congress, by an act approved 18th May, 1826, assigned a portion of the duty connected with the clothing and equipage of the army to the

Quartermaster's department. (Hetzell's Military Laws, 220.)

9th. An act of Congress, approved 23d August, 1842, abolished the office of Commissary of Purchases, and transferred all the duties of the

Commissary's department to the Quartermaster's department.

10th. In consequence of the legislation of Congress, the Quartermaster's department is charged with a heavy money and property accountability, the accounts and vouchers for which must be separated and sent for settlement to the Second and Third Auditors. Officers on the frontiers, and in the field, cannot keep appropriation accounts; and it often happens that not only vouchers in the same account, but items in the same voucher, have to go to the two Auditors, and every officer of the depart ment, as well as every officer commanding a company or detachment of mounted troops, is obliged to make to the Quartermaster General two property accounts every quarter; one of which must go to the Second, and the other to the Third Auditor, for settlement.

11th. If canvass be taken from the same bale to make or repair a wagon-cover, and make or repair a tent, or tent fly, the quantity used for each must appear on separate returns, because the accountability for that used in the latter case is with the Second, and that in the former with the Third Auditor; and if plank and nails be taken to make a floor and bunks for the sick in a hospital tent, or for the troops in an encampment, these materials must be accounted for to the Third Auditor, while the tents, tent-poles, and flies must be accounted for to the Second Auditor.

12th. I care not which Auditor may be charged with the settlement of the accounts of the Quartermaster's department; but I do hope that one or the other may be authorized by law to receive and settle all of

them, without reference to the other.

TH. S. JESUP,

Quartermaster General.

Quartermaster General's Office, November 8, 1853.

AN ACT relative to the settlement of certain accounts of the War Department.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That so much of the 4th section of the act entitled "An act to provide for the prompt settlement of public accounts," approved 3d March, 1817, as makes it the duty of the Second Auditor of the Treasury to receive all accounts relative to the pay and clothing of the army, the subsistence of officers, bounties and premiums, military and hospital stores, and contingent expenses of the War Department, and to examine the same, and the joint resolution approved the 29th July, 1850, relative to extra pay, be, and the same are hereby, repealed; and that all the duties and authority relative to said accounts heretofore vested in the said Second Auditor be, and they are hereby, repealed from and after the first day of July next, transferred to, and vested in, the Third Auditor of the Treasury, to be exercised and performed by him as fully and effectually, in all respects, as the said Second Auditor was authorized or required to do by the said act and resolution, or by any other act relative thereto; and all accounts arising in said branches of the War Department which may remain unsettled on the said first day of July, 1854, and all accounts which may on that day have been settled by the said Second Auditor, or which may otherwise remain legally in his office, shall in like manner be transferred to the said Third Auditor to be settled, reported on, preserved, certified, or otherwise acted upon by said Third Auditor, in the same manner precisely as they could or might have been by the said Second Auditor, if this act had not passed.

Sec. 2. And be it further enacted, That all accounts of pension agents, or relative to pensions, heretofore settled in the offices of the Third and Fourth Auditors, shall, from and after the first day of July next, be rendered, and all such accounts remaining unsettled shall be transferred to the Second Auditor, who is hereby vested with all the duties and authority, relative to the same, heretofore performed by the said Third or Fourth Auditors, respectively; and such transfer of the books and accounts relating to the business modified and changed by this act, and of such clerks employed on the same, shall be made, under the direction

of the Secretary of the Treasury, as may be convenient and suitable to

give to this act due and proper effect.

SEC. 3. And be it further enacted, That from and after the passage of this act, no payment shall be made on account of any pension thereafter allowed, of whatever name or nature, until the same shall be examined, with the evidence on which the allowance may have been made, and certified by the Second Auditor of the Treasury, and revised by the Second Comptroller, as other accounts of the War and Navy Departments.

#### AD.

Report of the Auditor for the Post Office Department.

OFFICE OF THE AUDITOR OF THE TREASURY FOR THE POST OFFICE DEPARTMENT, November 19, 1853.

Sir: In reply to your letter of the 12th instant, requesting "a report of the operations and condition of this office, including any improvements which may have taken place therein since the 4th of March last," I have the honor to report, that, on entering upon my duties in April last, I found the business of the office, as far as my limited experience in the practical operations and duties of the public offices would enable me to judge, to be in a condition to demand the promptest and most vigorous measures for its thorough reformation and reorganization. Its excellent rules and regulations, which were so well known in former years for their admirable effects upon the large amount of public business pressing upon it, as well as upon the internal order of the office and its character abroad, had fallen into neglect and disuse. Much of the business was in arrears, for the want of sufficient force to despatch it; and the clerks worked at a disadvantage, for the want of the proper room and other accommodations and facilities for the prompt performance of their duties.

To supply the remedy for this state of affairs in a few months, it is supposed, would have been beyond the skill of even the most experienced in the management of the public offices; but to one like myself, comparatively unacquainted with their practical operations, it must be a work of time and assiduous energetic labor.

The office is divided into six divisions, of whose duties, condition, and operations, together with the improvements I have endeavored to

introduce, I have briefly to report, as follows:

1st. Of the examining division. This division consists of forty clerks, who examined, corrected, and certified, in the quarter ending-

December 31, 1852 21,775 March 31, 1853 22,542 June 30, 1853 23,000

postmasters', foreign mail, and extra commission accounts, besides conducting the large correspondence pertaining to them. In order to guard as much as possible against the hasty and careless examination of the immense number of transcripts and other vouchers passing through the hands of the examiners, I have deemed it proper to re establish the practice (which once existed, but had lately been abolished) of re-examining; and, accordingly, it is now made the exclusive duty of an experienced clerk to re-examine, at random, the accounts and vouchers as they come from the hands of the examiners; thus detecting numerous errors, pointing out with unerring certainty deficient or negligent clerks, and supplying the data for improvement. The admirable working of this arrangement has satisfied me of the propriety of its re establishment, as well as of its efficiency in detecting error and saving money to the government.

A new feature, and, it is thought, one calculated to diminish the correspondence of the division, has also been introduced in the new mode of certifying to postmasters the errors in their respective accounts, by transmitting to them, in the form of accounts-current, as audited, an official statement, in juxtaposition to their own, and pointing out their error in each item of the account. This is substituted for the error circular formerly used for this purpose, and which took the i ems of error out of the account, and gave the postmaster an undiscriminating list of them, and forced upon him the necessity of asking for an explanation of that which ought to be (and is, under the new circular) its own explanation.

It is essential to the successful operation of the whole office that the work of this division be punctually completed on the last day of each quarter in the year; and it gives me pleasure to say that this is now regularly done, and that (with but slight exceptions) the clerks of the division are prompt, energetic, and assiduous in the performance of their

duties.

2d. The register's division.—This division consists of eight clerks, whose duty it is to keep registers of the postmasters' accounts-current as they come from the examiners, and note and certify the errors therein to the error clerks. All the clerks employed in it are prompt, regular, and industrious in the discharge of their respective duties; and the work of the division was in good condition when I entered the office,

and so continues at present.

3d. The bookkeepers' division.—This division consists of eleven clerks, and its duties are, (as is implied in its title,) keeping the fiscal record of the accounts with postmasters, and all others in the service of, or in anywise connected with, the Post Office Department. By dint of the most incessant and voluntary labor, without regard to office hours, and often till ten o'clock at night, the back work, which had largely accumulated, has been thoroughly brought up, and, but for the unavoidable delay caused by the use of the registers in making up the large amount of matter furnished by this office for the "Biennial Register," (Blue Book,) the final postings of the second quarter's accounts could be reported as completed in every section. This obstacle having been removed, by the completion of the Blue Book matter, all the postings will be completed in a few days.

4th. The collection division.—This division collects the revenue due from late postmasters, and conducts the large correspondence growing out of their accounts and furnishing statements of them when called for. It consists of fifteen clerks; and, except in some unimportant particulars, on assuming my duties I found its business generally in good con-

dition. As some evidence of its subsequent and present activity and efficiency, I need only mention the fact that it has collected, in the regular course of business, without additional force, and in 255 accounts, the sum of \$143,086 S6, from late postmasters, who became late since the 4th March last. In short, I have no hesitation in saying that the clerks in this division have performed promptly and accurately, within the last eight months, an amount of labor not surpassed by the same

number of men in any branch of the government.

5th. The pay division.—The clerks of this division are eleven in number. They adjust and pay the accounts of the contractors on more than 5,000 routes; conduct the correspondence growing out of them, besides paying all the contractors on the river and foreign mail lines. I found several of the desks of this division so overladen with work, as to preclude the possibility of paying the contractors with that promptitude so peculiarly and imperatively demanded by the entire mail service of the country. Having relieved the heaviest of them, and added one clerk to its regular force, I have the pleasure of reporting that, without hindrance from the contractors themselves, in sending in their acknowledgments and receipts, or other unavoidable causes, this important class of accounts will continue to be adjusted and paid with accuracy and punctuality.

6th. The miscellaneous division.—This division, as its title imports, conducts, under the direction of the Auditor, the suit business and general correspondence of the office, and has charge and supervision of all other matters not properly belonging to any of the other divisions. It

consists of eleven clerks.

The chief clerk of the office (who is also the head of this division) has charge of the legal proceedings of the office against defaulting postmasters, failing contractors, &c., and will furnish you with a statement of the operations and results of that branch of the business, in the annual report, which I will transmit to the Postmaster General and yourself in a few days; I will only remark here, that it is in a satisfactory condition. The clerks of this division have performed their respective duties with an alacrity and industry which is highly commendable in them, and greatly conducive to the prompt despatch of the public business.

In conclusion, I cheerfully acknowledge my indebtedness for the present condition of the entire office to the diligent and correct business habits and qualifications of its clerical corps, which has been materially improved in its efficiency and general character and deportment by the rigid system of examination, prior to appointment, required by the 3d section of the act of Congress approved 3d March last. The graduation of salaries and system of promotion contemplated by that section, together with the re establishment and enforcement of disciplinary regulations, have also done much to diffuse throughout the office a just sense of responsibility, and a spirit of emulation to secure promotion, not by political or personal favor, but by that moral, intellectual, and clerical improvement and qualification, of which it is the appropriate official acknowledgment and reward.

All of which is respectfully submitted.

WM. F. PHILLIPS, Auditor.

Hon. James Guthrie, Secretary of the Treasury.

## Report of the First Auditor.

TREASURY DEPARTMENT, First Auditor's Office, November 15, 1853.

Sig: In reply to your communication of the 10th instant, asking to be informed "of the operations and condition of (this) office, including any improvement which may have taken place since the 4th of March last," I have the honor to submit the following report: There have been adjusted and reported, either to the First Comptroller of the Treasury or to the Commissioner of Customs, having, respectively, the revision thereof, the following accounts, viz: Of collectors of the customs, as such 738 Of collectors of the customs, as disbursing agents of the treasury, 434 Of collectors, naval officers and surveyors, for additional compensation and official emoluments 178 Of superintendents of lights 211 Of agents of marine hospitals 314 Of special accounts for the construction of custom-houses, lighthouses, and marine hospitals 249Of accounts for refunding duties illegally exacted, and net proceeds of unclaimed merchandise sold 236 357 Of marshals, clerks, attorneys, and commissioners Of accounts connected with the survey of the coast of the United 15 States -Of accounts of the United States mint and its branches -36 Of accounts for the legislative and other expenses for the government of the Territories 18 Of accounts for the Treasurer and assistant treasurer of the United 78 Of salaries of all officers of the civil list paid directly from the 616 Of accounts for pay and mileage of members, salaries of officers, 48 and contingent expenses of the two houses of Congress Of accounts of the Commissioner of Public Buildings under various appropriations 109Uf accounts of the disbursing agents of the several departments and bureaus of the government, for salaries and contingent expenses thereof 510 Of accounts for the redemption of stock under acts of 1842, '43, '46, '47, and '48, Texan indemnity, Mexican war bounty scrip, and treasury notes 984Of miscellaneous accounts 549

In addition, there have been written, within the same period of time, 3,971 official letters—all of which, together with the accounts, have been regularly recorded; making, in the aggregate of letters and accounts, 9,651. With reference, generally, to the character of the accounts adjusted in this office, it may be remarked, that a mere aggregate of num-

Exhibiting an aggregate number of accounts, of -

bers, however large, furnishes a very inadequate indication of the amount of labor necessary in their examination, statement, and report, embracing, as many of them do, large abstracts and vast numbers of vouchers; in many instances the abstracts and vouchers exceeding 1,000 in number, and requiring more than 5,000 separate computations. Much care and attention are also required in their examination, whilst a very large portion of them demand great experience in their investigation, involving large amounts of money in the way of receipts and expenditures, and the necessity for frequent reference to laws running through a long series of years, and all proper regard to the multifarious treasury circulars.

The condition of the office is believed, in all respects, to be favorable to the objects and ends of public duty. There is no arrearage of work. This result has been obtained by the close and attentive application, during the regular business hours, of all connected with the office, and, for some months past, in the employment of many hours, daily, beyond

those assigned for official duty.

This condition, with its present force, can be maintained only at the expense of that onerous amount of labor with which it has been achieved, and which is not required by the regulations of the depart-Believing that it is not intended to impose upon any one office an amount of service not required by any fair rule of distribution, I respectfully suggest that, in order to relieve this office of an undue amount of labor, and to render its condition at all times equal to the performance of the duties assigned to it, an increase in its clerical force, now deemed quite inadequate, of the clerks one of class 4, one of class 3, and one of class 2, will be necessary. This addition will enable the office to meet, with promptness and alacrity, all demands that may be made upon it. In regard to any improvement in the office: while it is not admitted to have been, at any time, in a condition unfavorable to the business committed to its charge, it has, nevertheless, felt temporary embarrassment growing out of certain exigencies which have arisen within the period referred to in your letter. These were, the almost entire change of officers in the civil departments of the government, thereby duplicating accounts in every instance, and presenting the no inconsiderable obstacle of inexperience in the manner of their rendition by the newly appointed officers; the change of form of rendering accounts, as required by the circular of 15th June, 1853, which, while its terms were quite explicit, was unfortunately misconstrued by almost every collector to whom it was transmitted, thereby requiring much correspondence and a frequent return of accounts, informally rendered, so as to obtain a strict compliance with the circular. Yet these difficulties have been almost wholly overcome, and the accounts of customs, involving almost the entire revenue of the government, are now rendered and adjusted with a promptness not before this accomplished.

Similar difficulties have also been encountered with the judiciary accounts, in carrying into effect the provisions of the act of 26th February, 1853, providing a uniform rate of fees and charges, and also in the manner and form of their rendition, as required by the circulars of the First Comptroller of the Treasury, of the 15th of March and 5th of

May, 1853, under said act.

Much correspondence has also been rendered necessary, with collectors of the customs, relative to the district quarterly accounts, required

to be furnished by them under the circular of May 10th, 1853, of fees received under the act of 30th August, 1852, relative to steamboats.

A greater efficiency has also been imparted to the office by a system which I adopted on the commencement of the present fiscal year. This system was a classification of labor, and the assignment to each class, of such persons as, from observation, I believed to be best fitted to the discharge of its appropriate duties, placing each class or division under a control and supervision, subordinate to my own, of a chief, whose experience and qualifications designated him for the position. I also require punctual attendance during office hours, prompt attention to business, monthly reports of the condition of each desk, and that all accounts accruing in the office shall be examined and adjusted at the earliest practicable date after their receipt.

These regulations have met with a ready compliance on the part of the gentlemen connected with the office, while every demand upon their time, beyond the usual office hours, has been cheerfully responded to.

Permit me, in conclusion, to express a hope that the additional force which has been asked for may be granted, either by a transfer from some other branch of the department, or in such other way as you may deem proper.

I have the honor to be, most respectfully, your obedient servant, T. L. SMITH, Auditor.

Hon. James Guthrie, Secretary of the Treasury.

## ΛF.

## Report of the Second Auditor.

TREASURY DEPARTMENT, Second Auditor's Office, November 14, 1853.

Sin: In answer to your request for a report of the operations and condition of this office, including any improvement that may have taken place since the 4th of March last, I beg leave to submit the following:

As to the condition of this office, all the accounts of disbursing officers are settled as readily as rendered; all claims are adjudicated as speedily as the public interest will justify. The business of the bureau is generally up in all the branches pertaining to the disbursement of the public money, and all communications are answered promptly.

No change has taken place since the 4th of March last, except the reduction of the number of clerks, which occurred on the 1st of July last.

The operations of this office consist in the settlement of the accounts of the paymasters of the United States army; that portion of the Quartermaster's accounts chargeable to the appropriations for the contingencies and clothing of the army; all the accounts of the ordnance and medical bureaus of the army; the property accounts of the army pertaining to clothing, camp and garrison equipage, and all the ordnance property of every kind, both in the army and at the several arsenals and ordnance depôts, and all the property pertaining to the medical bureau.

The money and property accounts connected with Indian affairs, of

every description, are settled in this office.

In addition to the above, many arrearages of pay due the soldiers who served in the Mexican war, as well as extra-pay claims, are adjudicated in this office. These, however, are rapidly diminishing, and will, I think, in a short time be all paid. The verification for the rolls of military service for the Pension Office in issuing bounty land warrants, occupies the attention of this office, for all the wars since the 1st day of July, This business is also speedily drawing to a close.

The number of clerks now employed in this office, exclusive of the chief clerk, is twenty, and I find the business as promptly attended to as

when the number was much larger.

Very respectfully, your obedient servant, P. CLAYTON. Second Auditor.

Hon. James Guthrie, Secretary of the Treasury.

#### AG.

## Report of the Fourth Auditor.

TREASURY DEPARTMENT, Fourth Auditor's Office, November 11, 1853.

Sir: In obedience to your letter of the 10th instant, desiring "a report from this office of the operations and condition thereof," I have the honor

to submit the following:

By that part of the act of Congress "making appropriations for the naval service for the year ending on the thirtieth of June, one thousand eight hundred and fifty-four," approved on the 3d of March, 1853, which granted extra compensation to the officers, seamen, &c., of the navy, who served in the Pacific squadron during the war with Mexico, and subsoquently thereto, down to the 29th of September, 1850, a very large amount of extraordinary labor was thrown upon this office. In making out and copying the extra pay rolls of the different vessels belonging to that squadron, during the period referred to, almost the entire clerical force was constantly engaged for about three months, and a few of the clerks for a much longer time, to the partial neglect of the current business of the office. The labor thus imposed, as may be readily imagined, was truly heavy, in view of the fact that no provision was made by law for an increase of the number of the clerks of the office to meet the emergency. This work required no little care and research; and the general great accuracy with which the rolls were prepared for the action of the disbursing officers, proves the skill and industry which were exhibited in the discharge of this duty upon the part of those selected for its performance. This accumulated labor, as a necessary consequence, caused an unavoidable suspension of the regular business of the office. time at which the preparations for its commencement were completed, which was about the first of April last, the current and ordinary business of the office was, and had been since the 4th of March, fully up to the demands upon it, except the pursers' accounts, (and some few others, perhaps,) a considerable number of which had accumulated on the 4th of March, and were then awaiting settlement. It was confidently expected, however, that during the past summer and present fall, this branch of the business of the office would be brought up. But the aforesaid additional work thwarted expectation in this particular. Settlements of the accounts of pursers, navy agents, and others connected with the naval service of the United States, constitute the regular operations of the office. The postponement of these settlements was the source of some embarrassment and anxiety, as well to the chief of the office as to those who had accounts to be settled or claims to be audited. And by such as were interested, inquiries were repeatedly made, in reference not only to the current business of the office, but also as to the progress in the preparation of the extra-pay accounts. To these inquiries satisfactory answers had to be given.

By comparing the regular operations of this office, since the 4th of March last, with those of a like period in any one year for the last eight, it is gratifying to see that, notwithstanding the extraordinary labor thrown upon it by the act aforesaid, there is but a very slight diminution in the amount of the work performed, especially in view of the gradual increase annually in the duties of the office, without a corresponding increase in the number of clerks. It is true that, in consequence of all those clerks who are ordinarily charged with the settlement of pursers' accounts having been assigned to the extra-pay accounts, this branch of work fell greatly in arrear. But for nearly three months last past, these clerks have been diligently engaged in their regular duties, and the number of unsettled accounts is being gradually diminished. The navy pension accounts are also slightly in arrear. The navy agents' accounts, and those growing out of the marine service, are settled up, or in process of settlement, as far as rendered; and the miscellaneous accounts, including those settled by report as well as by certificate, are settled up to the current quarter.

This, however, together with the comparatively forward progress in the other branches of the business of this office, is the result of the late

and early application to their respective duties by the clerks.

The present condition of the office exhibits a pleasing result of the industry and capacity evinced by the clerks employed. It is true that industry and capacity have not enabled them to keep pace with the demands upon the office, yet there is an abundant reason shown for it. It is confidently hoped, however, that no accounts which are now ready for settlement, and which have not as yet been reached in the regular ' train of business, will remain unadjusted on the first of January next. Notwithstanding the foregoing facts, however, and the addition of two clerks since the first of July last, I am constrained to add, that in consideration of the annual increase, though gradual, of the business of the office, which appears from its records, the duties of it have become quite onerous.

I have the honor to be, sir, very respectfully, your obedient servant, A. J. O'BANNON, Acting Fourth Auditor.

Hon. James Guthrie, Secretary of the Treasury.

### AH.

## Report of the Fifth Auditor.

TREASURY DEPARTMENT, Fifth Auditor's Office, November 11, 1853.

Sin: I have the honor to acknowledge the receipt of your letter of the 10th inst., requesting, on behalf of the Secretary of the Treasury, a report on the operations and condition of this office, including any improvement which may have taken place therein since the 4th of March last.

In reply I have to state, that, with six clerks, there appear to have been 752 accounts adjusted and reported to the Comptroller since the 4th March last, consisting, in part, of the following description, viz:

1st. Bankers of the United States at London.

2d. Ministers extraordinary and plenipotentiary of the United States to Great Britain, France, Russia, Prussia, Spain, Brazil, Mexico, Peru, and Chili; minister resident and dragoman to Turkey; and commissioners to China and the Sandwich Islands.

3d. Secretaries of legation to the several ministers.

4th. Chargés des affaires to Portugal, Austria, Denmark, Sweden, Holland, Belgium, Naples, Sardinia, Rome, Venezuela, Buenos Ayres, Bolivia, Guatemala, Ecuador, Nicaragua, and minister resident in Switzerland.

5th. Consuls who receive pay, viz: at London, Alexandria in Egypt, Smyrna, Beyrout, Tangiers; Tunis and Tripoli, Barbary; Hong Kong,

Amoy, and Shanghai, in China.

6th. Consuls of commerce and commercial agents who receive no other pay than commissions on their disbursements for destitute seamen, many of whom have voluminous accounts. Of this class of consuls and agents who have accounts to settle at this office, there are 214 in the different quarters of the world.

7th. Disbursing agents of the Department of State and of the Gen-

eral Post Office, and Commissioner of Patents.

Sth. Disbursing agent for the census, under the Secretary of the

Interior, whose accounts are voluminous.

9th. Commissioners for running the boundary line with Mexico, surveyors and astronomers, and other agents under the Secretary of the Interior. These accounts have been very large, and involved heavy, sums.

10th. Awards of commissioners under treaties with foreign powers.

11th. Claims allowed by special acts of Congress for services and losses by citizens in Oregon in war with the Cayuse Indians, in 1847 and 1848.

12th. Accounts of captains of vessels for bringing home destitute

seamen from foreign countries.

Besides the business of settling these accounts, much time and attention is required in answering calls from the Department of State for statements and information, in settling accounts under special acts of Congress besides those above mentioned, and in preparing and forwarding letters on the general business of the office.

Of the accounts rendered and not settled, I have the honor to enclose

a list herewith. Some of these are not settled because the accounts of the bankers at London for the last quarter, and from whom the parties have drawn moneys, have not yet been received; others remain unsettled for want of time and explanation. I am not aware that any improvement has been made within the period under consideration.

I have the honor to be, very respectfully, sir, your obedient servant, S PLEASANTON.

PETER G. WASHINGTON, Esq., Assistant Secretary of the Treasury.

## List of accounts unsettled.

Daniel D. Barnard, minister to Prussia, from 1st September, 1851. John P. Brown, dragoman at Constantinople, from 15th May, 1850, to 30th March, 1853.

James Buchanan, minister to Great Britain, from 1st June to 30th

September, 1853.

George V. Brown, consul at Tangier, Morocco, from 1st July, 1852,

to 30th June, 1853. Richard H. Bayard, charge to Belgium, from 1st January to 30th

June, 1851.

Daniel M. Barringer, minister to Spain, from April 1st, 1852, to 7th November, 1853.

Cortland Cushing, charge to E-mader, from October 1st, 1852, to 30th

September, 1853.

Ferdinand Coxe, secretary of legation to the Brazils, from April 1st to 28th October, 1853.

Lewis Cass, jr., chargé to Rome, from July 1st to 31st December,

1852.

John Randolph Clay, chargé to Peru, from October 1st, 1852, to 30th June, 1853.

Miller Greeve, chargé to Denmark, from 30th October, 1852, to 31st

May, 1853.

R. B. Jones, consul general in Egypt, from 30th December, 1852, to 23d August, 1853.

J. R. Ingersoll, late minister to Great Britain, from August 30, 1852, to

23d August, 1853.

William B. Kinney, chargé to Sardinia, from April 1st, 1852, to 30th June, 1853.

J. B. Kerr, chargé to Nicaragua, from 21st August, 1851, to 30th June, 1853.

E. J. Morris, chargé to Naples, from July 1st, 1852, to 30th September,

H. H. Miller, chargé to Bolivia, from 22d September, 1852, to 30th June, 1853.

George P. Marsh, minister resident in Turkey, from July 1st, 1852, to 31st March, 1853.

Peter Parker, secretary of legation and interpreter in China, from July 1st, 1852, to 31st March, 1853.

Marshal, commissioner to China; no account received.

Bailie Peyton, minister to Chili, from 1st July, 1852, to 30th September, 1853.

Robert Schenck, minister to Brazil, from 1st January to 31st March,

1853.

Francis Schroeder, chargé to Sweden, from 1st July, 1852, to 31st March, 1853.

Luther Severance, commissioner to Sandwich Islands, from 1st

October, 1852, to 30th June, 1853.

J. M. Steele, chargé to Venezuela, from 1st July, 1852, to 30th September, 1853.

Thomas M. Foote, chargé to Austria, from 6th September, 1852, to

15th June, 1853

George Folsom, chargé to Netherlands, from 1st July to 31st December, 1852.

Theodore S. Fay, secretary of legation at Berlin, from 1st January to

30th June, 1853.

Same, as minister resident in Switzerland, from July 1st to September 30, 1853.

William Duer, consul at Valparaiso, to 30th August, 1853.

Thomas Aspinwall, consul at London, to 30th September, 1853.

F. B. Ogden, consul at Bristol, to 30th September, 1853.

B. Hammett Norton, consul at Picton, N. S., to 30th September, 1853. William Carroll, consular agent at St. Helena, to 30th June, 1853.

Charles Hufferagle, consul at Calcutta.

Ed. Brandt, consul at Archangel. C. W. Bradley, consul at Amoy.

F. W. Emory, Mexican boundary survey, from 30th September, 1851, to 31st March, 1853.

T. W. Tansill, quartermaster and commissary, from 2d September,

1852, to 31st March, 1853.

Lieutenant Whipple, boundary survey, from 1st April, 1850, to 31st March, 1853.

TREASURY DEPARTMENT,

Fifth Auditor's Office, Nov. 12, 1853.

### AI.

# Report of the First Comptroller.

TREASURY DEPARTMENT, Comptroller's Office, Navember 11, 1853.

Sir: The Assistant Secretary of the Treasury having informed me it is your desire to have a report from me of the operations and condition of this office, including any improvement which may have taken place therein since the 4th of March last, it gives me pleasure to state that the current business of the office is promptly taken up by the different clerks to whom it is referred, and despatched with the least possible delay. There are some old accounts yet unadjusted, arising principally from the judiciary system. They have been disposed of so far as satisfactory

explanations and evidence have been produced, and those that remain are the subjects of correspondence and instruction.

The fee bill of February 25, 1853, will relieve this office from much labor in the settlement of the accounts of marshals, district attorneys,

and clerks of the courts of the United States.

One clerk of the first class was added to this office by the act of March 3, 1853. The classification of clerks provided for by that act did not affect the clerks in this office. The duties of this office are prescribed by law, and the mode of discharging them may be traced, with slight changes, to the origin of the Treasury Department.

It has been sanctioned and approved by the several distinguished officers who preceded me, and no important improvement has been suggested to my mind as practicable. Since my appointment I have opened books of registry, that add to the convenience of the office, and, in some

particulars, to the facility of transacting its business.

The scattered positions of a part of my clerks greatly retards the business, by preventing that easy and free intercourse that should constantly be had between the chief of a bureau and his clerks.

Most sincerely yours,

ELISHA WHITTLESEY.

Hon. James Guthrie, Secretary of the Treasury.

### AK.

Report of the Second Comptroller.

TREASURY DEPARTMENT,
Second Comptroller's Office.

Sin: In reply to your request of the 10th instant, to be informed "of the operations and condition of this office, including any improvement which may have taken place therein since the 4th of March last," I have

the honor to submit the following report:

Under the act of March 3, 1817, establishing this office, the revisal and final decision upon all the accounts stated by the Second, Third, and Fourth Auditors devolve upon it, with the incidental duties of certifying balances, countersigning requisitions, prescribing forms, and keeping accounts of the appropriations for the War and Navy Departments. Ample employment is, of course, furnished for the whole force assigned to this bureau

Since the 4th of March last a reorganization of the office has taken place, and a new distribution of duties has been made, with manifest improvement, as I think, in the transaction of the public business. A large number of unadjudicated claims were then on hand, which had remained suspended, either for additional proof or further investigation. All these have been, for some time, disposed of, after a thorough and laborious examination, continued, frequently, to a late hour of the night, until everything, except the current business, was decided upon and finished. More disputed cases have been acted upon, more decisions given, and a more extended correspondence carried on, during this pe

riod, than ever before in the same length of time, since the establish-

ment of the office.

It affords me great pleasure to say that, in my opinion, this office was never in a better condition than at present, in all respects affecting the public interests. The gentlemen employed in it show a laudable desire to augment, by their talents and industry, the reputation of the office, with which their own is, in some degree, connected, and to discharge faithfully their several trusts. No branch of business is in arrears; not a single case sent here for decision remains unadjudicated. This gratifying condition has been attained and continued only by a prompt and assiduous attention, on the part of all, to their respective duties. If the nature of the case admits it, every official letter is answered upon the day it is received; and all accounts and official communications are taken up in their regular order of reception here, carefully examined, errors and omissions, if any are discovered, are corrected, and the accounts immediately returned to their proper Auditor.

As at present organized, the office is efficient for the objects for which it was established, and capable of meeting all the usual and customary

demands for its official action in a satisfactory manner.

There is, however, one class of accounts, for revising which no adequate provision has been made, and of which this office has never taken cognizance, except in extraordinary cases. I allude to the "property accounts," which have recently been the subject of correspondence between some of the accounting officers and the Secretary of the Treasury. If sufficient clerical force can be obtained for this duty, a desirable end will be accomplished.

I am, very respectfully, yours,

J. M. BRODHEAD, Comptroller.

Hon. James Guthrie, Secretary of the Treasury.

## AL.

# Report of the Commissioner of Customs.

TREASURY DEPARTMENT,
Office of Commissioner of Customs, November 14, 1853.

Six: In reply to your communication of the 10th instant, requesting information in regard to the condition and operations of the office under my charge, and of such improvements as may have been adopted therein since the 4th of March last, I have the honor to submit the following

report.

When I entered upon the duties of Commissioner of Customs, in April last, the office had for some months been under the care of a gentleman now occupying a responsible position in the treasury, and whose long experience and intimate knowledge of the duties of the office had enabled him so to regulate its business as to render any essential change apparently unnecessary. I had the pleasure, also, to find the gentlemen composing the official force fully competent to the discharge of the

various duties assigned them, and qualified, by their experience and knowledge of business, to undertake such additional duties as might be

directed by the department.

Since that period, I have given my best exertions to enforce a prompt and regular despatch of the public business, and a thorough and careful scrutiny into the accounts of the different public officers which receive their final examination and settlement in this office, and, by continued personal supervision and participation in the current business of each day, to guard as well against unnecessary delay, as a hasty or imperfect examination of the accounts of public agents.

It has been my constant practice personally to examine every letter received at the office, and to require that each communication calling for a reply should be attended to and answered by the evening mail of the

day on which it was received.

In requesting remittances on the estimates of disbursing agents of the treasury, each item is scrutinized; and when the authority is not clear, the amount, or such part of it as may be liable to objection, is withheld, the agent notified of such refusal, and the reason therefor briefly stated; and in the investigation of accounts of the collectors of the customs and other disbursing agents, many of which I have personally examined, I have enjoined, at any expense of time and labor, a thorough and rigorous scrutiny.

The final adjustment of an account is frequently delayed to await explanations in regard to suspended items; and the occasional absence of clerks, from sickness or by leave, will sometimes produce a slight accumulation of business. In such cases, however, additional labor is asked of other clerks; and being always cheerfully assumed, any considerable

accumulation is avoided.

The reports which, by your direction, have been made at the commencement of each month, show the number of accounts received at the office, the disposition which has been made of them, and the number remaining undisposed of at the end of each month; and to which, for a more detailed account of that part of the business of the office, I beg

leave to refer you.

The customs accounts, which by your direction, as per circular of 15th June last, were required to be made monthly, instead of quarterly, were at first somewhat tardy and irregular; as soon, however, as the collectors had become fully instructed in the mode of rendering their accounts, the irregularity and delay gradually diminished, and I am gratified at being able to apprize you that these accounts are now rendered with a good degree of promptitude—so much so, indeed, that most of those ending on the 30th September have passed through both the accounting offices, and many for the month ending 31st October are now in course of examination in their office.

In conclusion, I would ask leave, if this occasion be a proper one to do so, to call your attention to the inequality which exists in the compensation of the clerks employed in this office: every desk is responsible, and in each, higher qualities than that of a mere copyist are required; and some at a salary of \$900 are performing duties precisely similar to others who have \$1,500. The highest sum is certainly not too much; the lower so obviously insufficient, that I should omit performing my duty if I failed to bring it to your notice. In this connexion I may be

allowed to state that the clerks employed in this office have manifested a commendable zeal in the discharge of their respective duties. They have, so far as I am apprized, fully complied with the requirements you have prescribed, and on all occasions evinced a willingness cheerfully to co operate in their respective spheres, in carrying out the policy which, under your direction, has produced so marked and signal an improvement in the department to which this office belongs.

I am, with great respect, your obedient servant, H. J. ANDERSON,

Commissioner of Customs.

Hon. James Guthrie, Secretary of the Treasury.

### A.M.

Report of the Register of the Treasury.

REGISTER'S OFFICE, November 17, 1853.

Sire: In compliance with your note of the 10th inst., desiring information as to the operations and condition of this office, and any improvement that may have taken place therein since the 4th of March last, I have the honor to report, that the operations of the office consist mainly in keeping detailed statements of receipts into the treasury from the customs, sales of public lands, and miscellaneous sources; also, a like statement of disbursements therefrom; in preparing the annual report of the receipts and expenditures—of commerce and navigation—keeping the files of the statements and reports of the First and Fifth Auditors—the reports of the Commissioner of the General Land Office on the accounts of receivers of public moneys, both as receiving and disbursing agents—making issues and transfers of United States stocks, and preparing statements and dividends thereof, &c., &c.

Within the last year, the business of some of the desks, from various causes, has increased from forty to fifty per cent., and even more. As an evidence of its vast increase, allow me here to state, that formerly one clerk in the Secretary's office, was able without inconvenience, to issue all the receipt and expenditure warrants; now, there are three constantly

employed.

In the year 1825, the number of clerks employed was twenty one; subsequently, three were added to this bureau—what is termed the loan-office—requiring the service of five clerks. Yet, there are employed now only twenty-eight, making, in reality, an addition of only two. Yet, notwithstanding the great increase of business, the competency and industry of my clerical force is equal to the discharge of the duties required. Except in times of unusual business activity, or when frequent calls are made from the heads of this and other departments, it is not sufficient to meet them with that alacrity and promptness desirable, without greatly retarding the regular and ordinary business.

Many and numerous calls have been made by the Solicitor of the Treasury, since the 4th of March last, for authenticated transcripts of

papers and records in this office; all of which have been promptly furnished, as also those from other quarters, some of which require very extended statistical information.

The redemption of United States stocks not yet due, resolved upon by the head of this department, since the 4th of March last, as a matter of financial policy, the wisdom of which is best exemplified by its effect upon the general prosperity and credit of the country, has also greatly added to the current business of this department.

As to the condition of this office, allow me to say that the clerks of the various desks evince great industry, alacrity, and promptness in the discharge of their several duties, and that most of them are up, as far as circumstances will allow, with the regular business assigned them.

Those whose duty it is to prepare estimates for the commercial document, have been greatly retarded in their duties by the very many and extended calls made upon them by heads of departments and otherwise, and by delay in some of the collectors in sending in their returns. All the abstracts now being furnished, it is thought the statistics for this document will be ready for the printer by the second Monday in next month, and the balance, from time to time, as needed. It has been suggested, as a matter of reform in this branch, that collectors of the customs be required to make their returns monthly, instead of quarterly, as now. As the books must necessarily be adjusted and balanced at the end of each month, instead of quarterly, and as an additional clerical force will necessarily be required, to discharge the increased labor consequent thereon, allow me to suggest, "to what good" the change?

The statistics for the work usually styled Receipts and Expenditures cannot be collected and arranged until the books from whence they are gleaned are balanced and proved; and as the fiscal year ends on the 30th of June, and it usually requires about three months thereafter to balance and prove them, it cannot be supposed that the desk having charge of this matter is in a state of forwardness, or that the books will be ready to lay before Congress at the time designated by law; yet I have the honor to report, that the statistics will be ready for the

printer at the usual time.

As to any improvement in this office since the 4th of March last, I can only say, that since my induction into office, on the 20th of April last, the current business operations, including those of an incidental character, have been discharged with promptness and fidelity, and that particularly in relation to United States stock, letters have invariably been answered, and the stock transferred on the day of its reception, in pursuance of the instructions and wishes of the Secretary.

Upon an examination of the statements and vouchers from the Fifth Auditor's office, on file here, it was found that many hundreds were missing. Diligent search and inquiry was made for the missing papers, but few were found. In order to avoid a recurrence of this kind of contingency, the order of the Secretary, directing that "no account, document, or papers of any kind, on file, shall be withdrawn," has been rigidly enforced.

A change in name, and, as I conceive, without improvement, under an act of Congress of the 3d of March last, has been made in the office since that time, by what is termed a classification of the clerks—a change affecting the salaries, and not the duties, of the various desks. Whilst the duties have increased, as also the price of living, the classification

has, in the main, reduced the salaries.

In order to show that this act does not mete out "equal and exact justice," either in its provisions or omissions, among the different departments, allow me to state, that in the First and Second Comptroller's offices, out of fourteen clerks, there are seven in each receiving \$1,500 per annum; that in the Fourth Auditor's office, out of fourteen, there are nine at salaries of \$1,500 each, and in the Sixth Auditor's office five at \$1,800.

In this office there are twenty-eight clerks, and at least nine desks, requiring as much faithfulness, honesty, industry, and clerical ability, as in either of the other departments, and yet only four clerkships of \$1,500 salaries allowed. There are also at least two, requiring the very highest degree of competency, ability and experience, and yet there have

been no \$1,800 clerkships assigned.

It will scarcely be pretended, I presume, that clerical duties in this office are less onerous than in the others, or that less ability and time

are required in their discharge.

Permit me, therefore, in consequence of the great and growing increase of business—the numerous, extended, and accumulating calls consequent thereon, requiring the time of many of the clerks, a considerable portion of the year, out of office hours—to mention the propriety of the Secretary suggesting to Congress that said act be amended in accordance with present circumstances, and the principles of right, so as to allow to this office two clerkships of class No. 4, nine of class No. 3, and giving none less than \$1,200 per annum.

All which is respectfully submitted.

I am, very respectfully, your obedient servant, F. BIGGER, Register.

Hon. James Guthrie, Secretary of the Treasury.

### AN.

Report of the Solicitor of the Treasury.

Office of the Solicitor of the Treasury, November 17, 1853.

Sir: In compliance with the request from your office of the 10th inst., I have the honor to submit the following abstract of the general condition of the business of this office, and of its operations, since the 4th of March last.

Soon after I entered upon the duties of this office, in obedience to your instructions of the 21st of June last, the clerks having charge of its dockets were directed to enter upon a general examination of the condition and history of the suits pending and undecided, and of the unsatisfied judgments, with a view to such measures as might be deemed necessary to bring the former to a termination with the least avoidable delay, and as far as possible to collect the latter. This was found to be a work of considerable labor, as it was necessary to go carefully

over the dockets, filling some twenty large volumes, and embracing a period of more than sixty years, with a voluminous correspondence, much of which required examination.

The result of this examination I had the honor to communicate to

you on the 7th of October last, in three tabular statements.

1st. Statement of suits brought against debtors of the United States on accounts settled at the treasury and on other miscellaneous accounts, and amounts collected from the commencement of the government to the year 1830, when the office of Solicitor of the Treasury was established. From this it appeared that there were still unsatisfied 1.509 suits and judgments, amounting in the aggregate to the sum of \$7,225,637 78 at the period of the organization of the office in the year 1830.

2d. Statement of suits brought since the organization of the office in 1830 to the 27th June last, by which it appeared that there were at that last time 650 further suits unsatisfied, leaving due to the United States

the further sum of \$7,693,164 58.

3d. Statement of suits on duty bonds, showing the amount of judgments thereon still due, amounting to the further sum of \$6,328,71 53; the total amount of judgments and suits unsatisfied on the 27th of June

last being \$21,247,516 89.

In addition to the above is the register of suits for the recovery of fines, forfeitures, and penalties, constituting about one-half of the suits in charge of the office; but they are mainly in rem, and could not, therefore, be condensed into a tabular form, so as to exhibit satisfactorily the amount of this litigation in dollars and cents.

There are also a number of suits against the United States to settle the title to lands claimed by individuals under grants from the Crown of Spain, amounting in the aggregate to near ten millions of acres. These cases have nearly all been decided in favor of the United States in the courts below, and are now pending, on appeal, in the Supreme Court of the United States.

Of the suits of all classes above referred to, there remained pending and undecided in the circuit and district courts, on the 4th of March last, about one hundred and fifty; and the district attorneys have been instructed to prosecute them with all possible vigor, and bring them to a final decision with the least avoidable delay.

General instructions have been given to district attorneys, marshals, clerks of courts, and collectors of customs, defining their duties in regard to public matters in their charge, and directing them to report fully and promptly all their proceedings to this office; and to enable them to do so satisfactorily, blank forms have been placed in their hands.

Correspondence has also been had with the district attorneys in regard to the unsatisfied judgments, and this will be diligently pursued

with a view to their collection as far as possible.

Being satisfied that a complete list of all the outstanding judgments in each judicial district should be placed in the hands of each of the district attorneys, I have directed such lists to be prepared and copied into books specially prepared for that purpose, and sent to the district attorneys, to be kept among the permanent records of their offices. To these lists each attorney will be instructed to add all the new suits as they occur, thus perpetuating and preserving in substantial form a complete register of all the business in his charge. This, however, will require time and labor to complete. The notes taken in the examinations already made will aid greatly in this work, but the whole must necessarily

be gone over again with increased care and attention.

Of this large amount which thus appears to be outstanding, at least nine-tenths stand in the form of judgments against principals and sure-ties on official and custom-house bonds, in which executions have been issued and returned "nulla bona." All the usual and regular proceedings authorized by law have been resorted to to enforce payment, without effect; and I am satisfied that much the greater portion of it will be entirely lost, unless some more efficient and energetic measures can be devised and put in operation than are now authorized by law.

It appears that my predecessors have all been satisfied of this, and felt it their duty to call the attention of the head of the department and of Congress to this subject, with a view to such legislation as would afford the requisite remedy. In the report of the first Solicitor, V. Maxcy, esq., dated January 6, 1931, made to Congress by direction of the act establishing the office, he said, in regard to such of the above debt as

was then outstanding:

"No remuneration is provided by law to stimulate the zeal of the United States attorneys in the collection of this vast amount of debt. The legal fees in almost all the suits having been paid to their predecessors in office who instituted them, no inducement but a cold sense of unprofitable duty is left to incite them to exertion. A very great portion of this mass of debt is due from persons and estates that are hopelessly insolvent. Still, however, it is believed that a large amount, which will otherwise be lost, might be gleaned, if an adequate inducement to encounter the labor of collecting the information called for, and to act vigorously and zealously after obtaining that information, were held out to district attorneys in the shape of a liberal commission on collections," &c.

Nothing, however, was done by Congress on the subject. All that the office could do was to keep the district attorneys and collecting officers instructed to look vigilantly after these old claims, and to enforce collections wherever it was practicable; and this appears to have been done. But what was then foreseen by Mr. Maxcy has been literally and fully verified—the collections have been very small and trifling, and, in the absence of other inducements to activity and energy, such must continue

to be the case.

Whether the remedy recommended by Mr. Maxcy is the appropriate one, I am not prepared to say. The reflections which I have been able to give the matter incline me to the opinion that the best remedy will be to vest in the Secretary of the Treasury power to compromise these old claims, and, in connexion with that power, the necessary authority to appoint one or more special agents in each judicial district, to receive propositions for compromise from such parties as choose to make them, and to investigate the condition and circumstances of the parties, and make report thereof, with his opinion thereon; said agent also to have authority to look after other cases, where no offer of compromise is made; and for all his services, in both classes of cases, to be compensated by a commission on the amounts collected, graduated according to the difficulties and labor in each case. This, it appears to me, would afford ample inducement to activity and exertion to realize all that could be from this mass of old debt; and I respectfully recommend that

some such view or arrangement be pressed upon the consideration of

Congress.

In regard to the operations of the office since the 4th of March last, there have been twenty-one suits commenced on accounts settled at the treasury, amounting in the aggregate to the sum of \$405,769 81, of which sum \$17,325 87 has been collected and paid into the treasury.

The district attorneys have reported eighty two suits for the recovery of fines, penalties, and forfeitures, and thirty eight suits of a miscellaneous character; making in all one hundred and forty suits commenced since the 4th of March last. Of the results of these suits, very little is yet known. The appearance term in all of them occurring in the summer and fall months, time has not yet elapsed sufficient for the reports of the district attorneys to reach this office. I can only say that, in all cases, the officers of the law have been instructed to prosecute them with all practicable vigilance, and to report the results without delay.

It is perhaps proper to say that several of the suits reported are to recover penalties incurred under the act entitled "An act to amend an act entitled An act to provide for the better security of the lives of passengers on board of vessels propelled in whole or in part by steam, and for other purposes," approved August 30, 1852." By the forty-first section, it is provided that all penalties imposed by this act may be recovered in action of debt by any person who will sue therefor in any court of the United States. I am of the opinion that the government of the United States is not embraced by the words "any person," and that suit cannot be sustained in the name of the United States for a recovery of the penalties imposed by the said act. If this view of the law be correct, the act will be of little importance, inasmuch as private individuals will seldom trouble themselves to enforce the sanctions prescribed by the statute. I would respectfully recommend, therefore, that the forty-first section be amended, so as to read as follows:

Esc. 41. And be it further enacted, That all penalties imposed by this act may be sued for and recovered in an action of debt in the name of the United States, or by any person who will sue therefor, in any

court of the United States."

I am, sir, very respectfully, your most obedient servant,
F. B. STREETER, Solicitor.

Hon. James Guthrie, Secretary of the Treasury.

### AP.

Report of the Treasurer of the United States.

TREASURY OF THE UNITED STATES, November 29, 1853.

Sir: In reply to your letter of the 10th instant, I take occasion to state, that the principles of action and the practical operations of this office are the same now that they have been since its original organization. Its great and important duty is to receive, safely keep, and disburse the money of the nation.

The treasury receives money directly, at its counter, and indirectly, by its assistant treasurers and designated depositaries at other points, and disburses through the same channels. It also issues drafts on receiving officers of the treasury, not designated as depositaries, for the public money in their hands, and when paid, treats the amount of the transaction as at once a payment into and out of the treasury by the officers in question. When the disbursements of those officers are greater than their receipts, the government is saved the risk and expense of transporting the money to a depository, and the officer relieved from the risk of keeping it.

The receipts and payments of the treasury are regulated by warrants signed by the Secretary and Comptroller of the Treasury, and registered in the proper office. The warrants, in addition to being the proper vouchers in the settlement of the Treasurer's accounts, subserve the convenient purpose of fixing, with precision, the amount of each kind on the books of the respective offices in which the accounts of such receipts

and payments are kept.

The operations and condition of the office, in respect to these general duties, appeared to me to be in good order when I entered the office in April last. Since then the daily routine of business has been performed with assiduity and promptitude by the persons having charge thereof.

The most material improvements which have taken place in the office since I have been in it, are those which have arisen out of your construction of the Independent Treasury act of 1846, and your determination, so far as the Treasury Department is concerned, to give to the restrictive provisions of that act their full and legitimate effect.

Of the changes in the mode of doing business in the Treasurer's office, in consequence of that determination, the following are enumerated:

1st. Prior to the 4th of March last, as I am informed, moneys were advanced in large sums, to persons not officers of the government, for the ostensible purpose of purchasing United States stock, for paying interest on the public debt, and coupons, and other purposes of similar character. The sums now required for these objects are paid, in detail, at the treasury, and directly to the parties entitled, or their attorneys, without the intervention of other agencies. Lists of interest and unclaimed dividends are placed in this office and in the offices of assistant treasurers; and these dividends, as well as coupons, are paid, on application, at the respective offices, but paid out of funds for which warrants had issued, and the money placed in their hands as fiscal agents of the government. In like manner, in the purchase of public stocks. About twelve millions have been purchased since the 4th March, but not a dollar has been paid therefor from the treasury until the stock has been assigned and surrendered to the United States, an account duly stated and adjusted by the accounting officers, and a warrant regularly issued for payment, by the Treasurer, to the party entitled. Drafts for the amount, on the assistant treasurer at the place where the party entitled to the money desired payment to be made, have, I believe, without an exception, been made out and delivered to the person or agent, if present, and if not present, forwarded to the person entitled, by the mail of that evening on the day on which the stocks, by mail or otherwise, have reached the treasury. This has been effected by means of the attention and activity of the officers concerned.

2d. In like manner, the practice of issuing transfer drafts in favor of banks or brokers, to remain a considerable time upon the books, as an equivalent for the expenses of transportation, and occasionally renewed, instead of being paid at maturity, has entirely ceased. Instead thereof, in all cases the transfer draft has issued only after the deposite of coin has actually been made, or when it was necessary to transport the specie, and then the money has been deposited at the desired point, as soon as the transportation could be effected, by an officer of the department. As an effect of an actual transportation of specie from New York, to supply expenditures at this point, it may be observed, that as the circulation here becomes surcharged, bankers and dealers find it convenient to deposite coin in this office, and obtain therefor drafts on New York, without

expense to the government.

3d. A third measure of improvement, giving further effect to the Independent Treasury act, was your order to the Treasurer and assistant treasurers to receive on deposite from disbursing officers of the government the public money in their hands, (whenever such officers should apply,) and to pay it out on the checks of such officers; thereby affording them secure places for keeping the money for which they are responsible, and the facilities of making their disbursements by checks, paid in the current coin of the United States; also relieving them from the necessity or pretence of evading the spirit of said act, by placing the money with banks or brokers, as had theretofore been the practice. Under that order, several of the disbursing officers at Washington have made deposites with the Treasurer as fiscal agent; accounts have been opened and kept with them, and the checks of the depositing officers (occasionally drawn for a less sum than a dollar) are paid in coin. The sums so deposited up to this time in this office amount to \$649,000, and the payments on their checks amount to \$536,000, leaving now in the hands of the Treasurer \$113,000. Deposites of the same character, and to a much larger amount, will, in all probability, be made within a short time. The labors, duties, and responsibility of this office have been greatly increased by this operation.

By your orders, \$130,000 of the new silver coinage authorized by the last Congress have been transferred from the mint at Philadelphia to this office, with instructions to exchange the same, in reasonable amounts, for coins of larger denominations. This operation has been most sensibly and beneficially felt here, and in parts of Maryland and Virginia. As evidence of the fact, and of the great need the community had for small coin, there is now only \$50,000 of that small coin in the treasury, \$80,000 thereof having been exchanged for gold. Much relief has been afforded the community. At the same time, it has cast upon this office much labor and responsibility. The duties have been performed by the persons in charge of the money room, with promptitude and

fidelity.

Under the direction of the act of 3d March last, which went into operation on the 1st of July, a board was constituted, under your order, and all the clerks in this office were duly examined and found well qualified for the respective places, and, I must say, each has performed all the duties assigned him, in a manner which meets my approval; at all times, when necessary, remaining at their posts after the expiration

of business hours, in order to complete and despatch the business on

I desire also to remark, that on the 1st of July, under the said act of 3d March, the number of clerks in this office was reduced from fourteen to twelve; but since then, the husiness of the office, generally, and at each desk, has been very much increased, and there is every prospect of a still greater increase, as the new arrangements become more fully developed; and that no clerk of the fourth class was allowed to this office.

I am convinced that, under a due regard for the future efficiency of the office, an additional clerk should be allowed us, of at least a second class rate, and consequently I respectfully ask for and recommend the

employment of such a one.

The two clerks employed in the money room—one of the third, and the other of the second class—are not compensated in proportion to the responsibility and risk, as well as the requisite intelligence and arduousness of their special duties; and, therefore, I respectfully recommed that one of them be placed, in regard to salary, on the footing of a chief clerk of a bureau, and the other on that of a fourth class clerk.

I have the honor to be your obedient servant,

SAM. CASEY,
Treasurer of the United States.

Hon. James Guthrie, Secretary of the Treasury.

### AQ.

## Report of the Coast Survey.

Mount Blue, Franklin County, Me., November 2, 1853.

Sin: I have the honor to submit, in advance of my annual report, a condensed statement of the progress of the Coast Survey during the past year, with a few remarks, and the estimates for the next fiscal year; and would respectfully request that, as explanatory of the estimates, this letter may, as usual, be printed with the "estimates of appropriations."

Progress has been made in every State of the sead ast of the Union, on the Atlantic, the Gulf of Mexico, and Pacific, in field operations, or, where they are completed, in the flice work resulting from them. The two Territories on the Pacific have also received a proper share of attention.

My annual report will give full details in regard to this progress up to the close of the surveying year, classed under the head of the eleven sections into which the coast has been divided, and of office work, and will be accompanied by an appendix containing extracts from the reports of the assistants and others, and various information relating to the work itself, or to the results developed by it during the past year. It will be accompanied by sketches showing the progress of the work in each section, and giving the results immediately useful to commerce and navigation, in preliminary charts and hydrographic sketches.

A rough estimate of the comparative progress of the work in different years may be had from the fact, that in 1844 the work was going on in

nine States; in 1846, in fifteen; in 1847 it had been extended to eighteen. and now embraces all the States on both eastern and western coasts. In 1844 four sketches of octavo size sufficed to show the progress; in 1846 nine were required; in 1850 twenty-six; and now fifty-five are necessary for the same general purpose. There are few localities of our extended coast, from the St. Cloix to the Rio Grande, and from San Diego to Fraser's river, which have not been embraced at least in the preliminary operations of the survey; the information obtained from which is incorporated in the sketches of the yearly report. It needs but a cursory examination of these to show that the advance towards completion is decided and regular, requiring merely to be steadily followed up to insure its completion within a reasonable time; the system admitting of ready enlargement to adapt the progress to increased appropriations. is desirable to take the opportunity of our unexampled prosperity to push the survey more rapidly to completion. While increased means would be used economically and effectually, the estimates are limited to the same total amount as that approved by the department for the last year, and based upon the scale of operations repeatedly sanctioned by the Executive and Congress. I deem it but right to say, that the economy of nearly forty per cent. which was shown in my report of 1850 to have attended the previous enlargement of the work, would receive some increase from a further extension; but as a considerable portion of the work must necessarily be in the southern sections, where the expenses of every kind are higher than in the northern, a proportionate gain could not be expected. It would chiefly be in extending, in its complete form, to commerce and navigation, the general aid of maps and charts at an earlier day, that such an extension would be beneficial.

The most difficult piece of hydrography on our coast has been completed during the past season. The area of broken ground east and south of the island of Nantucket is nearly seven hundred square miles in extent, and is spread with dangers, some real and some only apparent. The work which has been prosecuted there perseveringly since 1846 has made the position of the day gers fully known, and has in turn employed the resources and taxed the perseverance of some of the most able The hydrography of such ground as this hydrographers of the survey. is truly difficult; it must be surveyed with the minuteness of a harbor, without the facilities which neighboring land affords. The land cannot be seen from the deck of a vessel from Davis's shoal, and yet it must be traversed closely with the sounding-line, and the positions of the soundings be clearly determined. It is no small source of congratulation that the difficult work is well through with, and without accident to those who have so faithfully encountered the very dangers which they seek, in order to instruct others how to avoid them. The excitement caused by the mere rumor, this summer, that one of the Atlantic steamers was upon these shoals, shows the well founded dread which the greatest commercial and navigating community of the country has of them—an excitement which was hardly allayed by the accompanying assurance that the steamer seen was one of the surveying steamers, whose departure to the shoals had been duly published, and whose business it was, therefore, to be just there, and at that time, where and when no passenger steamer should be. The preliminary sketch of these shoals issued ast year from the Coast Survey office, will be speedily brought up to date and published. If a permanent light could be placed on the old South shoal, it would, in a great degree, deprive this region of its danger

to large vessels bound into New York.

The completion of the primary triangulation of another of the sections of the coast (the third section,) and the rapid progress of the hydrography of the same section, which now nearly embraces the entire entrance of the Chesapeake bay, are gratifying results of this year. A shoal has been determined off the Chesapeake entrance which, if obscurely reported before, was not sufficiently known to be placed upon the charts, and public notice of the determination has been given to mariners.

One of the most interesting hydrographic results ever obtained in the survey, and which opens up a rich field of investigation, and has most important theoretical and practical bearings, is the carrying of soundings for some two hundred miles (with a small interval only) SE. from Charleston, directly off the coast, and the finding of soundings after crossing the Gulf Stream from St. Simon's (coast of Georgia) and Cape

Canaveral (Florida.)

The relation of the form of the bottom of the ocean, and especially that of these sections, to the peculiar features heretofore discovered in the Gulf Stream, is well determined by the observations of the year, particularly to those curious divisions of the warm water of the Gulf Stream by intrusive cold water, confirmed by so many observations, and now traced as far south as St. Augustine, in Florida. The discoveries of the soundings on the other side of the Gulf Stream were made independently and within three days of each other (June 7th and June 10th,) by the parties of Lieutenants Commanding J. N. Massitt and T. A. Craven, United States navy, the one sounding across the Gulf Stream from Charleston, the other from Cape Canaveral. The observations of this season clearly establish the existence of the polar current below the Gulf Stream, and its proximity to the shore where the depth permits, even where the surface water may be quite warm. They further render it very probable that there are counter-currents corresponding to the cold streaks in the Gulf Stream, which, if established, must be useful in navigation. It can hardly be doubted that this cold water off our southern coast may be rendered practically useful by the ingenuity of our contrymen. bottom of the sea fourteen miles ENE. from Cape Florida, five hundred and fifty fathoms in depth, was, in June last, at the temperature of 49° Fahrenheit, while the air was S1° Fahrenheit. A temperature of 38° (only six degrees above the freezing point of fresh water) was found at one thousand and fifty fathoms in depth, about eighty miles east of Cape Canaveral.

The reconnoissance of the coast of parts of North Carolina, South Carolina, Florida, and Louisiana, to determine the plan of work there, has been a valuable result of the last season. With that of the Gulf coast, where existing charts have been made from comparatively loose information, has been connected the approximate determination of astronomical positions, enabling us to give more accuracy to our own progress sketches, and to furnish important geographical data for general use.

The hydrographic reconnoissance of the western coast, so essential to commerce and navigation there, has been completed from San Francisco north, having been finished this summer. A new edition of the chart based upon it is in progress. The work there is beginning to assume its

regular form. Reconnoissances and preliminary surveys have been made in a rapid way, and sketches have been published to meet the immediate wants of the country; accurate surveys and complete maps will in turn speedily take the place of these. The efficers on that coast, from the first commencement by the lamented McArthur to the present time, have labored most assiduously to give the work the turn required by the wonderful development of the country. The history of such surveys does not present a case of rapid execution and publication of results which will compare with those which we owe to the coast survey parties in

California and Oregon, and the office organization on this side.

The more thoroughly the coast is examined, the more effectually do those difficulties to a continuous triangulation which were so fully believed, in the earlier stages of the survey, to exist, disappear. By far the largest extent of the coast, as I have shown in my report of 1849,\* present great facilities for the work, by high hills near the coast, by islands lying off, and by sounds of various breadths, only separated from the ocean by narrow strips of land. No portion yet examinedfrom Passamaquoddy bay to the St. Mary's; from the capes of Florida to the Tortugas; from Cedar Keys to Atchafalaya bay, and from Galveston to the Rio Grande, though including many places where it was argued that the system would fail—presents any insurmountable ob-stacles, or requires the system of triangulation to be departed from for The triangulamethods which are still available when the other fails. tion extends from Cape Small, in Maine, to Old Topsail inlet, North Carolina, (Beaufort)—a distance of fourteen hundred and fifty miles, measuring along the sides of the triangles—with a gap of but twentyfour miles, which we are certain, from the examination of Assistant Cutts and of Major Prince, can be filled up, and which the ordinary progress of the work is gradually closing. The same plan of extension from the bases in the different sections will have the same results. Each section rests upon its own base and astronomical determinations while detached; its survey is complete in itself, as far as it goes. The charts are published as the results come in; and when the triangulations join, the bases will serve to verify each other. In the smaller triangulations the bases will be more numerous, but the principle of the work The general reconnoissance, which has made imremains the same. portant progress during the last season, will be continued until we know, through its instrumentality, the facilities and difficulties for work along the entire coast; and two or three years, at most, will suffice, at the present rate of progress, to close up the intervals which now exist.

I have appended to the report of this year a list of tidal data, for the use of navigators. These results require not only laborious observation to collect, but still greater labor to compute. They are not presented at present as complete scientific data, but as approximations, closer and in a greater variety than heretofore accessible to the mariner, and which cannot fail to be useful to him in connexion with charts of the coast. The tidal phenomena of the principal ports are under investigation, and

the results will be presented in tide tables.

It is an interesting fact that the tides of our Atlantic coast, of parts of the Gulf of Mexico, and of the western coast, are of three different

Ex. Doc. No. 5, 31st Congress, 1st sersion, Senate, pages 2 and 3. 11

types. Those of the Atlantic coast are of the ordinary type of tidestwice in the twenty-four hours; having, however, a distinct though small difference in height and time between the morning and afternoon tides, known as the diurnal inequality. The Gulf tides are single day tides, and, until the coast survey developments established the contrary, were believed to depend upon the winds, which have the character of trade winds, and therefore considerable regularity, along that coast. The tides of our Pacific coast ebb and flow twice in the twenty-four hours, but with so large a diurnal inequality in height, that the plane of reference to mean low-water commonly used in the charts would, if employed, be a snare to navigators. A rock in San Francisco bay, which at one low-water of the day might be covered to the depth of three and a half feet, might at the next be a wash. A few stations only are required to complete the observations of the tides in the principal ports of the Gulf of Mexico, from Key West to the entrance of the Rio Grande.

The tables of geographical positions, which were published with my report of 1851,\* have received important additions since, which will be given in the appendix to my report of this year. It is intended to complete the preparation of a table of magnetic variations for the principal ports, as far as determinations have yet been made, for the report of next year.

The reduction of the last chronometer expedition for determining the difference of longitude of a point on our coast from Europe has advanced towards completion, the discussion being of the most thorough

sort.

The discussion of the problem of deducing longitude from observed moon culminations, interrupted by the lamented decease of Professor S. C. Walker, has been undertaken by one of our most eminent mathematicians, and promises to lead to very satisfactory methods of reduction, at once original and practical. This will enable the immediate use of our observations of moon culminations without the necessity of waiting for the receipt of corresponding results, often productive of much delay; and it will also prevent the loss of valuable observations, for the want of actual correspondences of observation, as now constantly happens.

The feature of the reorganization of the survey under the act of Congress of 1843, which secured a close connexion between the science of the country and the work, was most judicious. The tendency of such works is undoubtedly to adopt a routine, and to adhere to it; so that sometimes they fall behind the progress of the science of the day. System is so very desirable that its excess, constituting a blind routine, is always a danger to be avoided. When closely in contact with the scientific movement of the country, this becomes impossible; the judgment of men of science being prompt to detect any faltering in the forward course of operations which they understand, and improvements in which they fully appreciate.

The act just referred to giving a wise discretion to the Treasury Department, the regulations established in conformity with it, in 1843 and 1844, have sufficed for the present development of the work with scarcely

a necessary supplement.

<sup>\*</sup> Rx. Doc. No. 3, 32d Congress, 2d session, Senate, pages 166 to 442.

The advantages of bringing together civilians, officers of the army, and officers of the navy, in one organization, as was done by the act just referred to under the Treasury Department, which alone could unite them, have been so often dwelt upon in former reports, that I feel it would be out of place here to repeat my observations. I believe indeed that it is so generally admitted as not to require any further remark. I therefore simply refer to the reports of 1848, 1850, and 1851\*, in which the subject is fully discussed.

The number of officers of the army attached to the coast survey is at present fourteen, namely: of the corps of engineers, four; topographical engineers, two; of the line, eight. Under the rules for details, adopted by the Secretary of War in October, 1853, the services of at least four additional officers will be obtained. These rules will make the number of military and civil assistants equal, as required by the plan of reorganization of 1843, and will permit the officers who may be detailed to remain a sufficient period on the survey to acquire the necessary experience for usefulness in its operations. This result we were approaching in 1846, when the Mexican war swept off all the officers but two from the coast survey. The number of army officers has been steadily increased, as the War Department were willing to detail them to meet our applications. A list of the officers of the army attached to the work in March and September will be given in the appendix to my report.

The number of officers of the navy attached to the coast survey is sixtyfour, whose names are given in the appendix to my report. Besides the sea officers, thirteen engineers are attached to the steam-vessels in commission. I have necessarily dwelt, in my successive reports for the last three years, upon the rapid rotation in the naval parties, and other circumstances by which the efficiency of the hydrography was very much

impaired.

Justice to the work required that I should point out the facilities which had been withdrawn, and the expenses which the Treasury Department had been required to assume. I have now every reason to expect that the former relations with the Navy Department will be restored, and that full efficiency will be once more given to the hydrographic parties.

The regulations of the coast survey require the superintendent to submit annually to the Secretary of the Treasury a programme of "directions" for the operations for the next year. In execution of the "directions" for the coast survey, approved by the Secretary of the Treasury in June last, instructions have been issued by me to the several chiefs of parties, in relation to the work required from them. A list of the field parties, specifying the several localities of work, and the operations in which they were engaged during the past year, will be given in the appendix to my report. My own service, as chief of a party, will be found in the same list.

By monthly reports from the parties a supervision of the operations is maintained, providing for their due progress and connexion, and for contingencies arising during the season. I have personally inspected the operations of several of the parties, and when the operations of several were to be combined to effect an immediate purpose, have personally made the necessary arrangements. I was enabled generally to combine

<sup>&</sup>quot;Ex. Doc. No. 13, House of Representatives, 30th Congress, 2d session, pp. 4, 5; Ex. Doc. No. 12, House of Representatives, 31st Congress, 2d session, pp. 6, 7; Ex. Doc. No. 3. Senate, 32d Congress, 1st session, pp. 9, 18.

the inspections made in sections III, IV, V, and VI with the service, on the commissions for the improvement of the James and Appointatox rivers, for Cape Fear entrance and river, and for the Savannah river, which had been requested by the War Department, and received the sanction of the Secretary of the Treasury. During the surveying season I visited the parties on the James river, the Cape Fear, Winyah bay, the Stono, Savannah river, and the St. John's, and gave personal directions to the parties in section I on the way to and while at my stations in Maine.

I visited New York, by request of the common council, in relation to

the regulation of the water line of the harbor.

The particulars of the execution of the several duties in the field, afloat, and in the office, by the assistants of the survey and others, will be given in the second part of my report, under the heads of the several geographi-

cal sections of the coast.

A list of the developments and discoveries made by the coast survey was published in my report of 1851,\* and continued in that of 1852.† Very few portions of our coast are closely examined without yielding discoveries important to navigation. The charts furnished by the surveys are its most important practical results, showing not only the character of the bottom in sailing tracks of the coast, or the pilot tracks of harbors, but over every portion of the extent of coast and harbor. In the course of the minute investigations required for this purpose, facts of a striking kind are ascertained. During the past year, for example:

1. A ridge connecting Davis' shoal and Davis' bank (Nantucket

shoals) has been found.

2. A sand-bank or knoll, with but five fathoms on it, about five miles east of Great Rip, with twelve fathoms between it and Davis' bank and Fishing Rip; the water gradually deepening outside of it, to the northward and castward, beyond all the limits of the series of shoals.

3. A rock not on any chart, in the inner harbor of Gloucester, Massa-

chusetts, which should be marked or removed.

4. A bank, ninety miles eastward from Boston, with about thirty-six fathoms of water upon it; probably a knoll connected with Caske's ledge,

but having deep water between it and the ledge.

5. The inlet at the north end of Monomoy island has diminished considerably in extent since 1848, and in the course of a few years will probably close up entirely, a new one being open to the north of Chatham light, which is now the principal entrance to Chatham harbor.

6. Two shoals near the entrance to the Chesapeake, one four and three quarter nautical miles S. E. by E. from Smith's Island light house, with seventeen feet on it; and the other E. by S. nearly, seven and three-quarter miles from the same light house, with nineteen and a half feet on it.

7. The remarkable discovery of continuous deep sea soundings off Charleston, and of soundings in the depth of between four and five hun-

dred fathoms beyond the Gulf stream.

8. The discovery of cold water at the bottom of the sea below the Gulf stream, along the coast of North and South Carolina, Georgia, and Florida.

<sup>\*</sup> Ex. Doc. No. 3, Senate, 32d Congress, 1st session, pp. 126, 127.

<sup>†</sup> Ex. Doc. No. 58, Senate, 22d Congress, 2d session, p. 80.

9. The well ascertained influence of prevailing winds in the movement of the bars at Cape Fear and New Inlet entrances, and the gradual shoaling of the main bar; the latter fact being replete with interest to the extensive commerce seeking this harbor.

10. The changes at the entrance to Winyah bay, Georgetown harbor.

The washing away of Light-house point at the same entrance.

11. The removal of the east spit of Petit Bois island, in the hurricane of 1852, opening a new communication between the Gulf and Mississippi sound, and the rendering of Horn Island pass more easy of access by the removal of knolls.

12. The diminution, almost closing, of the passage between Dauphine

and Pelican islands, at the entrance of Mobile bay.

13. The accurate determinations of Ship shoal, off the coast of Leuisiana, in connexion with the site for a light-house.

14. The changes at Aransas pass, coast of Texas, as bearing upon the

question of placing a light-house or light-boat there.

15. The determination of the position and soundings on Cortez bank, near the island of San Clemente, coast of California.

16. The changes at Humboldt harbor, California.

17. The depth of water on the bars at the entrance of Rogue river and of Umqua river, Oregon.

18. The changes in the entrance to Columbia river.

19. The determination of several anchorages on the coast betwee San Francisco and the Columbia river.

The calls for information from the archives of the coast survey nav very much increased of late years. During the one just passed, eighty seven applications for copies of maps and charts, and statements founded upon them, have been received and answered, under the authority of the Treasury Department, and in pursuance of one of its general regulations. Of these, forty-three copies or tracings of maps were for the use of officers of the United States government, forty-one were furnished to individuals or associations, and three to State or local authorities. The liberal regulation of the department places the information from the archives of the coast survey at the disposal of those who desire it, at the mere cost of copying. A list of the tracings, &c., furnished from the office will be appended to my annual report.

One hundred and thirty one maps and charts, and preliminary sketches, are now in progress or have been published; a list of which, showing the class of each, its relative progress, whether in the hands of the draughtsman, engraver, or electrotypist, or published, will be given in the ap-

pendix to my report.

The following maps and sketches, fifty-five in number, will accompany my report:

I to II. Progress sketches in the several sections, marked from A to K inclusive. Section No. 1 A. Section No. 2 B, &c.

Alden's rock, Portland harbor.

13. Minot's ledge, off Boston harbor. (Light house survey.)

14. Nantucket shoals, hydrography from 1846 to 1852 inclusive.

15. Deep-hole rock, Cotuit harbor, Massachusetts. (Light-house survey.)

16. Sow and Pigs ledge, Cuttyhunk, Massachusetts. (Light-house survey.)

17. Romer shoal and Flynn's knoll, New York harbor. (Light-house sketch.)

18. Progress of Sandy Hook, New York harbor.

19. Metomkin inlet, coast of Virginia.

20. Watchapreague inlet, coast of Virginia.

21. Hog Island harbor, coast of Virginia.

22. Cape Charles and vicinity, coast of Virginia.

23. Seacoast of Delaware, Maryland, and Virginia, No. 2.

24. Cherrystone inlet, coast of Virginia.

25. Pungoheague river, Virginia. (Light house sketch.)

26. Progress of the survey of Cape Fear river, and reconnoissance southward.

27. Cape Fear entrance and New inlet, North Carolina. (Preliminary

chart.)

28. Chart showing the progress of the survey of the Gulf stream.

29. Diagrams of the Charleston, St. Simon's, and Cape Canaveral sections of the Gulf stream.

30. Winyah bay and Georgetown harbor, South Carolina.

31. Cape Roman shoals, South Carolina. 32. North Edisto entrance, South Carolina.

33. Progress of the survey of Savannah river and Tybee entrance, Georgia.

34. St. John's river entrance, Florida.

35. Sub sketches of progress of survey of Florida reef.

36. Diagrams of tides at Key West.

37. East and west entrances of St. George's sound, Florida.

38. Barataria bay, coast of Louisiana. 39. Timballier bay, coast of Louisiana.

40. Isle Dernière and Ship shoal. (Light-house survey.)

41. Sabine river entrance.

42. Galveston entrance, Texas. 43. San Luis pass, coast of Texas.

44. Aransas pass, coast of Texas.

45. Cortez bank, off San Clemente island, coast of California.

46. San Diego bay, California.

47. Santa Barbara, coast of California.

48. Progress of the survey of San Francisco bay.

49. Diagrams of tides at Rincon point, San Francisco bay.
50. Reconnoissance of the coast of California from San Diego so San Francisco.

51. Progress of the survey of Columbia river.

- 52. Reconnoissance from Gray's harbor, Washington Territory, to Admiralty inlet.
  - 53. Shoalmaker bay, Washington Territory. 54. Cape Flattery, Washington Territory.

55. False Dungeness, Washington Territory.

During the past year notices have been issued from the Coast Survey office, under authority of the Treasury Department:

1. Of geographical positions on the western coast.

2. Of the tides in San Francisco bay.

3. Of the position of Cortez shoal, off San Clemente island, coast of California.

4. Of two shoals off Smith's island, coast of Virginia.

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis 5. Of the deep-sea soundings off the coast of South Carolina, Georgia, and Florida, and the discovery of soundings beyond the Gulf stream.

6. Of the hydrographic reconnoissance of the coast of California and Oregon Territory, embracing notices of Mendocino, Humboldt bay, Crescent City bay, Ewing harbor, Rogue river, Point St. George, Cape Blanco, Umpqua river, and Columbia river.

7. Of a bank south of Cashe's ledge, with thirty-six fathoms on it.

Examinations have been made, under the laws of 1851 and 1852, for the Light house board, with minute surveys in cases requiring them, of York harbor, Maine; Minot's ledge and the Cohasset rocks, off Boston harbor; of Deep-hole rock, Cotuit, Massachusetts; of the Sow and Pigs reef, off Cuttyhunk, entrance to Buzzard's bay; of Romer shoal, New York harbor; of the Florida reef, in reference to signals or sea-marks; of East Pascagoula entrance, Mississippi; of Ship shoal, off Last island, (Isle Dernière,) Louisiana; of Sabine entrance, and of Aransas pass, Texas; of Point Bonita, and of Humboldt, California; and Umpqua river entrance, Oregon.

Examinations for placing surf-boats have been made on the coast of Maine, New Hampshire, and Massachusetts, by request of the Treasury

Department.

The reports made on both the foregoing classes of work are given in

the appendix to my annual report.

Congress, at its last session, directed that a map should be prepared showing as nearly as practicable the configuration of the coast, the probable limits of the Gulf stream, the limits of soundings off the coast, and by colors the progress made in the several operations of the survey, as reconnoissance, triangulation, topography, and hydrography, and in the publication of the maps and charts resulting from the work. a map has been compiled from the archives of the survey, as far as they furnish the information, and from other authorities where the coast survey has not reached. The progress sketches accompanying my reports have shown, year by year, all the details of the field-work, in a form suitable to engraving, and the engraved sketches have in fact been prepared in the Coast Survey office, and generally by the apprentices to the art of engraving there, so as to be ready for publication as early as my Besides these, a map in colors, on a scale of Troduct, has been prepared in the office to accompany the present report. The very fortunate result of our attempts to explore the Gulf stream this past year has enabled me to give, from our own data, a very large portion of the hydrography of that remarkable peculiarity of the American coast. planations which will accompany the Congress map will dispense with remarks here in regard to its details.

Certain details in regard to the organization and economy of the coast survey, which might be expected to find a place in my report, have been so often discussed by me, that a reference to former reports will perhaps be more suitable than any extended notice here. Such subjects are, the organization of the parties for different operations, explained in the report of 1845;(a) the advantages of the division of the coast into sections, in the report of 1846,(b) and again further developed in 1847,(c) and in

<sup>(</sup>a) Ex. Doc. No. 58, Ho. of Reps.; No. 13, Senate, 29th Congress, 1st session, p. 2.
(b) Senate, No. 3, 29th Congress, 2d session, pp. 3, 4.

<sup>(</sup>c) Ex. Doc No. 6, Senate, 30th Congress, 1st session, pp. 2, 4.

1849;(d) the order of succession of the operations of the survey explained in 1847, (e) and again more in detail in 1848; (f) the advantages of the triple organization of civilians, army and navy officers, noticed in 1848,(g) 1849,(h) 1850,(i) and 1851;(j) the comparative gain by increasing the scale of work, 1850; (k) the relative cost of the topography and of the land surveys in 1848(1) and in 1850;(m) the relative cost of our own and of foreign surveys, 1849;(n) the cost of the different operations, showing that scientific accuracy is gained at small cost, 1848;(o) the plan of working deemed appropriate to the western coast, 1850(p) and 1851.(q)

Before passing to the estimates, there are two points on which I beg leave to offer remarks—the first is in regard to the policy of publishing the records of the work; and the second, in regard to the power invested in the Treasury Department to regulate the salaries of the assistants.

The arrangements of the survey of the coast from the beginning, with ample means to insure a reasonable degree of progress year by year, and with resources in persons, instruments, equipments, and other appliances, such as are now possessed by the work, is a very different problem from that which has been presented for solution. case it would have been easy to divide the coast into sections of nearly equal extent of shore-line, or into an extent so proportioned to the facility or difficulty of survey as to advance each one equally, and so to arrange the field parties that their labors would be devoted during the most profitable portion of the year in each section and the office-work, that it would keep exact pace with the results produced in the field. The sections of our work were necessarily commenced in turn as means could be procured, and it is only of very recent years that most of them have been put under survey. It requires a careful study of their relative progress year by year, and regulating the operations to suit it in the different sections, to bring them ultimately on the same line of advance. would be expensive to keep up an organization for a limited extent of coast which is capable of embracing a large portion of it; hence the prominence which I have given for some years to the argument for pushing the survey of the coast of Florida, and for publishing the results and observations made in the progress of the work. The unequal division of the part of the coast suitable for field-work during the summer and winter, is a difficulty requiring much care to meet. The very different periods at which the work was begun in the different sections, is another difficulty. These are independent of the difficulties strictly professional which are presented in the course of the work, which are of themselves

sufficient to employ the resources of all engaged in it. I am satisfied, by a careful revision of the progress in each of the sections, made with the sketches and maps before me, that the progress in each is tending to a more just advance, and is in general very satisfactory. These sections and operations, where full means have been furnished, have gone forward in such a way as to convince the most skeptical of the capabilities of this mode of surveying. I need only instance the third section—Delaware, Maryland, and Virginia-in which the whole primary triangulation, the secondary connected with it, and that of the outer coast, has been nearly completed in less than ten years, and the topography and hydrography kept close by the triangulation, permitting, now that the main part of the section is finished, its gradual completion with the others. While this section illustrates the position just taken, it also shows the correctness of that in relation to unequal progress; for, while the sections further south were untouched for want of means, this one was in rapid progress. At one period the means furnished permitted the extension of the work but in one direction, and at a later day but in two directions. At present, on the Atlantic and Gulf coast, seven sections are in full activity. Taking the work on the Atlantic and Gulf of Mexico together, I estimate that it is nearly one half done, and that its present rate of progress is between four and six per cent. of the whole work. small increase of means to the office-work, and to push forward sections six and seven, the Florida reefs, keys, and coast, would enable me to be positive of the period of the completion of the eastern coast. ters stand, I will do my best to bring about the result of the uniform and speedy completion of the work, recommending the measures necessary to insure it, and taking advantage of all means that may be furnished. The history of such works shows that the observations accumulated during their progress, and which must be published for permanent reference, and to give them authenticity, are brought out very slowly. who have taken part in them are dispersed, and questions arise which require their aid to answer. However perfectly in theory a work is organized, such questions will occur. The interest in the results is lost with the responsibility for their accuracy. The present time, when the organization is complete, and the observers are still connected with the work, is the proper time on every account to publish the observations. The economy of present publication would be very considerable. I am sustained in these views by the judgment of the scientific men of the country generally. It is my duty to present this subject to the department and to Congress, that the responsibility of the delay, and of the other difficulties which I foresee unless these publications be soon commenced, may not rest with me.

In this connexion I must further observe, that, in a temporary work of this sort, the principle of compensation in proportion to the zeal, assiduity and talent shown, in other words the services rendered, is a cardinal one. The Treasury Department by law now regulates the compensation of the employes of the work; and it is, in my opinion, essential to its progress that should be the case. That this power has been carefully exercised, the comparison of compensation from date to date for the last ten years will show; in fact, at a period when compensations out of the public service are increasing, and when increased expenses of living must be met, the economy has been found to be too stringent, as the

resignations of many in the employ of the survey, and their advancement in the new position which they seek, fully prove. I make these remarks with the more freedom that the subject does not affect me personally. My own compensation has remained entirely stationary since I first received my appointment, and is now fixed by law. The extension of the coast survey has at least quadrupled my duties as superintendent; and I have continued to discharge the duties of superintendent of weights and measures, and have been at the call of the government whenever it thought my services were important, without any remuneration even for the necessary expenses of travelling; and this relation I have no desire to change. My remarks apply to the compensation of the assistants and other employes of the survey, and are founded on an experience which cannot be deceptive. To take away the power of regulating the salaries of the coast survey officers from the Treasury Department would be vitally injurious to the efficiency of the work. A tem porary work should be organized as such, and when other principles are applied to it, the work under them must take shape accordingly. legislation which confirmed the reorganization of 1843 wisely looked to the coast survey as temporary, and its advance has shown the wisdom of the measures founded on that principle. A cardinal feature of that policy is the regulation by the Treasury Department of the salaries of the employé:

The following is a condensed statement of the progress of the survey in the different geographical sections of the coast, the operations being referred to in the general order of their succession. The particulars of the work and their relations to the parties and persons employed are given

in the subsequent division of my report.

Section 1. Coast of Maine, New Hampshire, Massachusetts and Rhode Island .- Setattishill, near Lewiston, and Blue mountain, in Franklin county, Maine, have been occupied as primary stations, the first being also an astronomical point. The range of stations observed upon extend from the Camden mountains, at the mouth of the Penobscot, to Peaked mountain, in Amherst. The reconnoissance has been carried to the range of points next to the St. Croix. The secondary triangulation of Casco bay has received some extension. The heights of important points in New Hampshire and near the southern boundary of Maine have been The topography of York harbor, Maine, and its vicinity, has been executed, and that of Portland commenced. That of the coast of Massachusetts has been extended from Essex northward towards New-That of Plymouth harbor, Massachusetts, and its approaches, and of Monomoy point, Cape Cod, has been completed. That of Cuttyhunk and Gay Head has been finished. The hydrography of Portland harbor has been completed, including a minute survey of Alden's rock; also of Plymouth harbor, Massachusetts. Monomoy shoals north of Nantucket have been surveyed. The hydrography of the shoals east and south of Nantucket has been completed to the inner limits of the deep-sea work. That of the south side of Martha's vineyard has been executed. That of Gloucester harbor has been completed. Minute surveys have been made of Minot's ledge, off Boston harbor, and of the Sow and Pigs, off the entrance of Buzzard's bay, for the sites of light-houses; and of Deep Hole rock, for placing a beacon. The regular tidal stations at Boston, Portsmouth and Portland, have been kept up; and temporary star tions have been added at Siasconsett, Great Point, and Hyannis, Massa: chusetts. Views were taken for charts of Salem, Newburyport and Ports-Digitized for FRASER

mouto narbors. Examinations have been made in reference to placing

surf boats for the Treasury Department.

The computations of the chronometer expedition between Liverpool and Cambridge have been nearly completed. The computations of the season's work, generally, have been kept up. Maps and charts are in progress, or have been published during the year, of Davis' shoal and other dangers near Nantucket, Bass river, Boston, Wellfleet, Salem, Annisquam, Newburyport and Portsmouth harbors, Muskeget channel, and eastern series numbers 1, 2 and 3.

Section II. Coast of Connecticut, New York, New Jersey, Pennsylvania and Delaware.—The triangulation of the Hudson has been continued to Plumb Bush, and the topography has been extended from above New York city to Sing Sing, and the hydrography from Fort Washington to Croton point. The Romer shoals and their vicinity, New York harbor, have been surveyed in reference to beacons, and to ascertain if any changes had taken place in the adjacent channels. Sandy Hook shore-line has been retraced, to register the changes there. The Jersey plats have been surveyed. A re-survey of Little Egg harbor has been made. Tidal observations at Governor's island have been continued. The off-shore chart, from Gay Head to Cape Henlopen, and various sketches, have been published, and the three sheets of Long Island sound are nearly ready to be issued. Maps and charts of the south side of Long Island Nos. 2 and 3, mouth of Connecticut river, changes at Sandy Hook, comparative map of Romer shoal and Swash

channel, are in progress.

Section III. Coast of Delaware, Maryland and Virginia .- Observations for telegraphic difference of longitude have been made at Washington for the connexion with Raleigh and thence to Charleston. main triangulation of Chesapeake bay has been completed to the capes. A line has been measured of the outer coast triangulation, and an azimuth Magnetic observations have been made in determined for verification. connexion with the azimuth station. The secondary triangulation of the Chesapeake is nearly complete; that of the James river from Richmond to Harrison's bar nearly so; that of the Rappahannock has been carried from Fredericksburg to Port Royal, nearly, and is in progress. The topography of the ocean-shore of Maryland and Virginia has been continued; that of the Chesapeake has been extended from Back river to Newport News point, and to include the shores of Hampton roads. The shore-line of the James river has been traced from Richmond to Harrison's bar, below the mouth of the Appomattox; that of the Rappahannock, from Fredericksburg to Port Royal, has been commenced. The verification work on the Patapsco is nearly completed. The hydrography of the outer coast of Maryland and Virginia has been completed to Cape Charles; that of the entrance to the Chesapeake, including both capes, has been nearly finished; that of the bay, near the entrance, has been in progress. The hydrography of the James river, from Richmond to Harrison's bar, has been completed, and that of the Rappahannock is in progress. The tidal station at Old Point Comfort, Virginia, has been continued, and the tides of James river have been observed from Richmond to City Point. Maps and charts are in progress, or have been published within the year, of seacoast of Delaware, Maryland and Virginia No. 1; Chesapeake bay Nos. 1, 2 and 3; Chesapeake bay in one sheet, smaller scale, entrance of Chesapeake bay; Patapsco river, Appomattox river, part of James river, harbor of Hog island; Cherrystone, Metomkin and Watchapreague inlets; Chincoteague shoals, Virginia. A manuscript map of the Appomattox for the city of Petersburg is nearly completed.

SECTION IV. Coast of Virginia and North Carolina.-Washington and Raleigh, N. C., and Raleigh and Charleston, have been connected for difference of longitude, and connexion of Washington and New Or-The secondary triangulation has been extended northward of the Virginia and North Carolina line in Back bay, Currituck sound; also over Core bank and sound southward beyond Beaufort harbor, N. C.; the reconnoissance extending still further south towards New river. The triangulation of the Cape Fear river has been made from New inlet to the head of Eagle's island, above Wilmington. The topography of Currituck sound has been carried on at the same time with the triangulation; so also that of Core sound and its vicinity, and of the Cape Fear river. The hydrography of Cape Fear entrance, New inlet, and Cape Fear river to a point above Wilmington, has been executed. The Gulf stream has been explored in a section perpendicular to it from Cape Hatteras and Cape Fear. The tidal observations at Smithville have been continued, and stations for the Uape Gear river tides have been occupied. Maps and charts have been published, or in progress, of Beaufort harbor, Albemarle sound Nos. 1 and 2, and in one sheet, on a smaller scale, Hatteras shoals and inlet, Ocracocke inlet, Core sound, Fryingpan shoals, Cape Fear entrance and New inlet, Cape Fear river, and New river.

Section V. Coast of South Carolina and Georgia .- A general reconnoissance has been made from Cape Fear entrance to the Santee river, South Carolina. Astronomical observations have been continued at the Charleston observatory, which has been connected, for difference of longitude, with Raleigh, North Carolina. The primary triangulation between the Edisto base and Charleston has been continued by the opening of lines and occupation of stations, and the secondary connected with it has been carried along the Stono and across James' island. triangulation, determination of shore line, and hydrography of Winyah bay and Georgetown harbor, have been made. Ine triangulation of the Savannah river has been carried from the base on Union causeway to the entrance. Additional examinations of Charleston bar have been The exploration of the Gulf stream has been continued, on a section perpendicular to its direction from Charleston light, and from near Savannah entrance, (St. Simon's,) Georgia. Tidal observations have been kept up in Charleston harbor. Maps and charts have been published, or are in progress, of Georgetown entrance and Winyah bay; Cape Roman shoals, Charleston harbor; N. Edisto entrance and river; Tybee entrance, and of Savannah river.

Section VI. Coast, keys, and reefs of Florida.—The survey of the St. John's entrance and Fort George inlet, including the triangulation, topography and hydrography, and the necessary observations of tides and currents, has been made and furnished to the engineer in charge of the improvement. The triangulation of the Florida keys and reef has been extended from Point Elizabeth, near Carysfort, to near Key Tavernier, and from Key West eastward. The topography has been extended from Soldier key to Old Rhodes key, and from Key West,

eastward, over Boca Chica, and the marking required by the land office made.

The hydrography has been carried from Triumph reef to Turtle reef. The Gulf stream has been explored, in sections, from St. Augustine and Cape Canaveral, and in other positions from Cape Florida north-A report on screw-pile signals for the reef has been made.

Sketches have been published of Florida peninsula, Bahia Honda and Rebecca shoal, and additions have been made to the sketch of Key A chart of Kev West harbor on a large scale, of St. John's river entrance, and of the Florida keys and reef No. 1, are in progress.

Section VII. Coast of Florida.—Special reconnoissances, with astronomical points determined, and hydrography, have been made of the east and west entrances into St. George's sound, harbor of Apalachicola, and a general reconnoissance of St. Andrew's and St. Joseph's bays, and of the coast westward. Tidal observations at Pensacola have been Sketches of Cedar keys and of St. Mark's harbor have been published, and those resulting from the past season's work are in progress.

Section VIII. Coast of Alabama, Mississippi and Louisiana.—The reconnoissance for extending the primary triangulation from Lake Borgne to the delta of the Mississippi has been made. A general reconnoissance of the coast, with the determination of astronomical positions for a sketch of the coast, has been made from the mouths of the Mississippi to Atchafalaya bay. Special reconnoissances for furnishing preliminary charts have been made of Barataria and Timballier bays, The stations of the secondary triangulation have been established, and the lines opened for connecting Lake Borgne and New Orleans, and for extending the work to near Madisonville, on Lake Pontchartrain. The topography has determined the shores of Lake Borgne. A complete survey for the location of a light-house, including triangulation, topography and hydrography, has been made of Last island (Isle Dernière,) Louisiana, and of Ship shoal, in its vicinity. A hydrographic examination of Naso roads and Horn Island pass has been made, to ascertain if changes had occurred from the hurricane of 1852; also of the reported break across Ship island and of the passage between Little Pelican and Dauphine islands, Mobile entrance. The regular hydrography has been carried westward in Mississippi sound, and Pascagoula river entrance has been examined for the site of a light-house. Hourly observations of tides have been made at the southwest pass of the Mississippi and at Last island.

The following charts and sketches have been in progress: Mobile bay Nos. 1 and 2, Mississippi sound Nos. 1 and 2, Mobile bay on a smaller scale in one sheet, and of the reconnoissance named above. Charts and sketches have been published of the passes into the Mississippi; Horn Island pass, Mississippi; Naso roads, Chandeleur island, Louisiana.

Also diagrams of the tides at Cat island, Louisiana.

Section IX. Coast of Louisiana and Texas.—Astronomical and magnetic observations have been made at two of the primary stations, determining the latitude and the azimuth of certain lines. The reconnoissance for the secondary triangulation has been carried to Matagorda bay, and the work itself has advanced to the head of the bay. The topography has been carried from the Brazos river to Cany creek, near the limits of the triangulation. The hydrography of Galveston Upper bay, and of San Luis entrance and bay, has been completed. Aransas pass and the entrance to the Sabine have been examined in reference to sites for light-houses. The hydrography of the Rio Grande entrance, and of part of the river, has been executed. Hourly tidal observations have been made at Galveston, and at the Rio Grande and Matagorda entrances. Charts have been published of Galveston entrance and sketches of the bay; and the sketches of the last season's work are in the hands of the draughtsmen.

Sections X and XI. Coast of California, and of Washington and Oregon Territories.—The geographical positions of Punta de los Reyes, Bodega bay, Heaven's anchorage, Mendocino city, Shelter cove, Humboldt city and harbor, Trinidad bay, Point St. George, Port Orford, and the mouth of the Umpqua, have been determined by preliminary observations in connexion with the general hydrographic reconnoissance of

the coast.

A preliminary base has been measured at Pulgas, San Francisco county, and the main triangulation of the coast has been commenced. The triangulation of the bays adjacent to San Francisco bay has been

completed.

A preliminary base has been measured near San Pedro; and the triangulation for connecting the Santa Barbara islands with the main, and furnishing bases for the work on these islands, has been commenced. The triangulation of Humboldt harbor, and the coast near Mendocino city, near Crescent city, under Point St. George, and at the mouth of the Umpqua, has been executed, and the preliminary topography made in connexion with it. The topography of San Francisco bay proper has been completed, and that of the adjacent bays is in progress. graphy of the coast near San Pedro, and towards Point Ano Nuevo, has been executed. The topography of Bonita point has been completed in reference to the site of a light-house there. A hydrographic reconnoissance has been made of the coast north from San Francisco to Columbia river, and the hydrography of Humboldt harbor, of Mendocino, Trinidad bay, Point St George, and the mouth of the Umpqua. A resurvey has also been made of Columbia river entrance, and the hydrographic reconnoissance of Washington Territory has been extended. The examination of a bank near San Clemente island has been made, and the hydrography of the Santa Barbara islands has been commenced. Tidal stations have been established at San Diego, Monterey, San Francisco, Columbia river, &c.

The following maps, charts, and sketches have been completed, and either published within the year or are ready for publication: Reconnoisance chart from San Francisco to San Diego, San Francisco city, Catalina harber, coast near San Pedro, Point Conception and Coxo, Santa Barbara, Cape Mendocino, Ewing harbor, mouth of Columbia river to Straits of Fuca, Shoalwater bay, Washington Territory; False Dungeness, Cape Flattery, and Neéah harbor, Washington. Charts and sketches are in progress of San Francisco entrance, of the revised reconnoisance north of San Francisco, of Columbia river, of

.Umpqua river, and San Diego bay.

The foregoing statement does not include the work done in the computing department of the office, nor the maps of record and assemblage for the use of the survey, nor the sketches of progress in the different sections, which accompany my annual report, and are in themselves

quite numerous.

I proceed to give an estimate of the progress of the work which can be executed under its present organization, with the means shown in the same estimate. If it is desired to hasten the work to completion, there will be no difficulty in so doing by adding to those estimates. I have, however, adopted the scale heretofore approved by the Executive and by Congress. The expenses of the work on the western coast are not necessarily as great as in past years, and I have made a reduction adapted to the present circumstances there. I have already given the reasons why the survey should be pressed in section VII, and without increasing the total sum asked for the survey of both coasts. I have provided for this section. The very pressing matter of a publication of our records, spoken of in this and previous reports, and recommended heretofore by the Treasury Department, I have provided for by an estimate which is of moderate amount.

The estimates follow the order of the geographical sections of the coast, and of the different operations constituting the field and office-work. They suppose the same aid which is now furnished, under the law, from the Navy and War Departments, by the detail of officers for the hydrography and land-work respectively.

### ESTIMATE FOR THE FISCAL YEAR 1854-'55.

General expenses for all the sections, namely: rent, fuel, postage, materials for drawing, engraving and printing; carpenter's work and materials; blank books, stationery, printing and ruling forms; binding; transportation of instruments, maps and charts, and miscellaneous office expenses; purchase of new instruments, books, maps and charts

\$16,000

SECTION I. Coast of Moine, New Hampshire, Massachusetts and Rhode Island. Field work.—To extend the primary triangulation in Maine eastward, and the astronomical and magnetic observations connected with it to the Penobscot, and to complete the reconnoissance to the boundary, including the selection of a site for the base of verification; to continue the secondary triangulation of Casco bay, and across to the Kennebeck, and determine the heights of stations; to continue the topography of the coast between Portsmouth and Portland, and to complete that of Portland harbor and its approaches; to continue the topography of the coast of Massachusetts from between Essex and Newburyport northward; to complete the off shore hydrography near the Nantucket shoals; to continue that of Nantucket sound and the eastern entrance to Martha's vineyard; to commence that of the outer coast of Cape Cod; to complete that of the coast of Massachusetts between Boston and Cape Ann; to complete that of the harbors of Chatham and Gloucester, Massachusetts, and of Saco and Kennebunk, Maine, and to commence that of Casco bay, Maine; to continue observations of tides and currents at stations on the coast, and to take the views required for the chart of Portland. Office-work.—To make the reductions and computations for the section; to make drawings of harbor charts of Plymouth and Gloucester, Massachusetts, and of York and Portland, Maine; to make a finished drawing of the Nantucket shoals; to complete the engraving of charts of the harbors of Gloucester, Annisquam and Ipswich, Massachusetts, and to commence that of York and Portland, Maine; to continue the engraving of coast charts, eastern series Nos. 1, 2 and 3, coast of Rhode Island and Massachusetts, will require

SECTION II. Coast of Connecticut, New York, New Jersey, Pennsylvania and Delaware.—To continue the triangulation, topography and hydrography of the Hudson, and to execute verification work in the section; to continue observations of tides and currents; to continue the engraving of the third sheet of the south side of Long Island and of pre-

liminary sketches in the section, will require

Section III. Coast of Delaware, Maryland and Virginia. Field-work.—To make the astronomical and magnetic observations required at stations on the Chesapeake bay and rivers; to continue the triangulation of the James and Rappahannock rivers; to continue the topography of the lower part of Chesapeake bay and of the James and Rappahannock rivers, and of the outer coast of Maryland and Virginia; to commence the off-shore hydrography of the section; to continue that of the Chesapeake bay and of the adjacent bays near the entrance; to continue that of the James and Rappahannock rivers. Office work.—To make the computations and reductions required by the work of the section; to commence the drawing of the seacoast of Maryland and Virginia, sheet No. 2; to complete that of sheet No. 1 and that of the second series south of the Potomac, and to continue that of the James and Rappahannock rivers; to continue the engraving of the upper series of the Chesapeake, Nos. 1 and 2, and of a portion of the rivers, and to complete that of the general chart of the bay, and to engrave in part No. 2 of the outer coast series, will require -

Section IV. Coast of Virginia and North Carolina. Field-work.—To continue the primary triangulation of Pamlico sound; to make the connexion with the Chesapeake by the secondary triangulation, and to follow with the topography, and to continue that of the coast and the topography between Beaufort and the Cape Fear river; to continue the in-shore hydrography between Cape Henry and Cape Hatteras; to continue that of Pamlico sound; to extend the hydrography south from Beaufort and north from the Cape Fear; to continue the tracing of the Gulf stream; to make the necessary tidal observations. Office work.—To make the computations and reductions required by the work of the section; to make the drawings of the preliminary sketches required by the season's work; to complete the drawing of Cape Fear river to the head of Eagle's island; to continue the engraving of the charts of Albermarle sound, Nos. 1 and 2, of Cape Fear entrance and river, and of the preliminary sketches, will require

\$37,000

7,000

25,000

24,000

Section V. Coast of South Carolina and Georgia. Fieldwork.—To continue the primary triangulation and the secondary triangulation connected with it eastward, between Charleston and Bull's bay, and to make the necessary astronomical and magnetic observations; to extend the secondary triangulation south of Tybee entrance and over St. Mary's entrance and river and Brunswick harbor; to extend the topography east from Charleston harbor and south from Tybee. following the triangulation; to continue the hydrography of the ocean coast between Charleston and Savannah entrances. from Georgetown entrance south, to include Roman shoals, and of St. Mary's harbor; to continue the exploration of the Gulf stream in this section, and to continue the tidal observations at Charleston, Savannah, and along the coast of the Office-work.—To complete the drawings of Winvah bay and Georgetown harbor, of Savannah river entrance, of St. Mary's harbor, and of the sketches required by the season's work, and to commence the drawing of the seacoast of South Carolina south of Charleston entrance; to complete the engraving of Charleston harbor; to commence that of Winyah bay and Georgetown harbor, and of Savannah entrance and river, will require

SECTION VI. Recfs, keys, and coast of Florida.—(See es-

timate for usual appropriation for that special object.)

Section VII. Coast of Florida. Field work.—To make the triangulation of St. Andrew's and St. Joseph's bays, and the necessary astronomical and magnetic observations connected with it; to continue that of Apalachicola harbor and of St. Mark's and the adjacent coast, and to commence that of Pensacola; to complete the topography of the Cedar Keys and adjacent coast, and to commence that of St. Andrew's bay and St. George's sound; to complete the hydrography of the Cedar Keys and Crystal River offing; to commence that of St. Andrew's bay, St. George's sound, and St. Mark's. Office-work.—To make the necessary drawings of preliminary sketches, and to engrave them; to complete the drawing and to commence the engraving of the coast sheet, including the Cedar Keys and Crystal River offing; to commence the drawings of the harbors and parts of the coast, will require

Field-work.—To complete the general reconnoissance of this coast; to continue the primary triangulation towards the delta of the Mississippi, the secondary triangulation of the coast from the entrance to Lake Borgne, southward, along the group of Chandeleur islands towards the Mississippi; to complete the telegraphic connexion of Washington, Mobile, and New Orleans, for difference of longitude, to make the astronomical and magnetic observations required in connexion with the triangulations; to continue the preliminary surveys of the more important bays west of the Mississippi; to continue the topography of the coast and shores of Lake Pontchartrain and of the Chandeleur islands; to complete the hy-

\$25,000

23,000

drography of Mississippi sound, and to continue that of Louisiana bay; to continue the in shore and off-shore work south of the islands bounding Mississippi sound; to continue the hydrography of the approaches of the Mississippi, and to make the necessary tidal observations on the coast of Louisiana. Office-work.—To make the computations and reductions required by the work of the section; to make the drawings of Mississippi sound, number 2; to commence one of the sheets of New Orleans and its approaches; to complete the engraving of the chart of Mobile bay; to continue that of Mississippi sound, number 1; to complete the engraving of sketches of Atchafalaya, Côte Blanche, and Vermilion bays, and of the sketches required by the season's work, will require

\$27,000

Section IX. Coast of Louisiana and Texas. Field-work. To make particular reconnoissances for the main triangulation; to extend the main triangulation southward and westward, and to make the astronomical and magnetic observations connected with it; to execute the secondary triangulation and topography of Matagorda and Lavacca bays, and to complete the triangulation, topography, and hydrography at the mouth of the Rio Grande; to execute the hydrography inshore and off shore from Galveston, southward and westward; to commence that of Matagorda bay. Office-work.-To make the reductions and computations required for the section; to complete the drawing of East and West bays, in connexion with the chart of Galveston bay; to commence the drawing of the coast sheet south of Galveston; to make the drawing of the Rio Grande entrance; to engrave the preliminary sketches required; to continue that of Galveston and East and West bays, and commence that of the Rio Grande entrance, will require

22,000

Sections X and XI. Western coast California, Oregon, and Washington.—(See estimates provided for, as last year, by special appropriation.)

Total, exclusive of the Florida reefs, keys, and of the western coast

206,000

The estimate for the Florida coast, reefs, and keys, and for the western coast, is intended to accomplish the following-named results:

Section VI. Reefs, keys, and coast of Florida. Field work. To continue the general reconnoissance of the coast; to continue the triangulation of the Florida reefs outside, and keys from Tennessee reef towards Key West, and of the keys east of Boca Chica, and to continue that of Barnes' sound; to extend the topograpy of the keys from Key Rodriguez westward; to continue the hydrography of the reef southward and westward; to execute that of Key Biscayne bay and Card's sound, and to continue the Gulf stream examinations necessary. Office-work.—To complete the computations and

reductions required by the work of the section; to make the drawings and sketches of harbors and shoals from the previous season's work; to complete the drawing of Key West chart (large scale) and of sheet No. 1, Florida keys and reefs; to continue the engraving of Key West chart; to commence that of Florida reess and keys, No. 1, and to engrave the sketches and preliminary charts, will require

\$30,000

SECTIONS X AND XI. California, Oregon, and Washing-n. Field work.—To continue the determinations of geographical positions, absolute and relative, of capes, headlands, &c., and to determine the position of the forty-ninth parallel on the coast; to complete the triangulation of the Straits of Rarquines, Suisun bay, &c.; to continue the main triangulation of the coast north and south of San Francisco bay, and to follow the triangulation with the topography; to continue the triangulation and topography of the several harbors; to continue the triangulation of the Columbia river and of Puget's sound; to complete the hydrography of San Francisco entrance; to continue that of San Pablo and adjacent bays; to continue the hydrographic reconnoissance of the Straits of Fuca, Puget's sound, &c., of the harbors of the coast, and of Santa Barbara channel. Office-work.—To make the computations of geographical positions and others required by the work; to complete the drawing and engraving of revised reconnoissance and harbor charts; to commence the drawings of San Francisco bay and its appendices, of Columbia river and of the Santa Barbara islands; to continue the engraving of San Francisco bay and of Columbia river; to commence that of the Santa Barbara islands, and new harbors and anchorages developed; to reduce and engrave the sketches resulting from the previous season's work, and received from current work, will require

130,000

The total amount appropriated for the eastern and western coasts, for the fiscal year 1853-'54, was the same which is now asked for these objects, the distribution being different for reasons stated. The additional sum of twenty thousand dollars is required for the publication of the records and observations of the survey.

The items are as follows:	
1. For the coast of the Atlantic and Gulf of Mexico generally	206,000
2. For publishing the records of the work and the observa-	
tions made during its progress	20,000
3. For continuing the survey of the reefs, keys, and coast of	•
Florida	30,000
4. For continuing the survey of the coast of California, Ore-	-
gon, and Washington	130,000
The appropriations for the fiscal year 1853-'54 were:	
1. For the coast of the Atlantic and Gulf of Mexico generally	186,000

2. For the Florida reefs, keys, and coast - \$30,000

Respectfully submitted by

A. D. BACHE,

Superintendent of U. S. Coast Survey.

Hon. James Guthrie, Secretary of the Treasury.

### AR.

# Report of the Light-house Board.

TREASURY DEPARTMENT, Office Light-house Board, Nov. 19, 1853.

Sire: I have the honor respectfully to submit for your information a report of the proceedings of this board, and of the operations of the lighthouse establishment, since the date of the last report from this office, on the 15th of January last, and in advance of a more detailed report which will be submitted for your consideration, and for that of Congress, at an early day.

The epidemic which has been so destructive of human life along the southern coast has been the means of delaying the reports called for in September last from the light-house inspectors on that coast, which will unavoidably delay the completion of the full and detailed report from

this office.

Since the date of the last report the usual routine duty of providing and distributing supplies of all kinds to the different light houses and light-vessels; making examinations and inspections, estimates of cost of and repairs to the different towers, buildings, sea-walls, and light-vessels; of raising, cleaning, painting, numbering, and replacing all the buoys authorized by Congress; preparing correct lists of buoys and beacons, light-houses and light-vessels, and publishing and distributing the necessary notices to mariners of the establishment of new aids to navigation, and of changes in the distinctions of old ones, has been performed under the general instructions, and by special directions, from this office, by the different district inspectors, local superintendents, and the engineer officers of the army detailed from time to time for this service in conformity to the acts of Congress.

The board has been embarrassed in the execution of works for which special appropriations had been made based upon estimates of the cost of labor and materials at the time the appropriations were asked for, in consequence of the great advance in the price of materials, and the demand for labor in almost every department of industry during the past season. To overcome these difficulties it became necessary to modify previously conceived plans, or to delay the works until additional appro-

priations could be asked for and obtained.

In consideration of the importance of the aids authorized by Congress to the commerce of the country, the board deemed it advisable to adapt its plans, as far as practicable, in every case to the means at its command.

In the first district, embracing the coasts of Maine and New Hampshire—Lieutenant W. B. Franklin, United States corps topographical engineers, inspector—the work of placing the numerous aids to navigation, authorized by Congress at the last two sessions, has been carried on with commendable zeal, and with great economy. Numerous buoys, spindles, and beacons in this district, for which Congress had at different times made appropriations, had been permitted to fall into decay, or to be destroyed by ice and storms, prior to this officer entering upon the duties of the district; to replace these, and to prosecute the new works under his charge with advantage, was a service of much difficulty.

All the old stations for buoys have been carefully re-marked, and duplicates provided to meet losses arising from casualties on nearly all those upon which spindles or beacons have been authorized, and which had been allowed to fall into decay; these aids have been restored, or are in course of being renewed, and the following new works have been either completed or commenced: Narragaugus light-house was finished and lighted during the last winter; a light house has been built during the past season on Bear island, and is nearly ready for lighting, to supply the place of the one destroyed by fire last winter; the light-house authorized to be placed on Heron Neck has been built, and will be ready for lighting in a short time; plans and estimates have been prepared, submitted, and approved, for constructing the light-house authorized for Boon island, and the necessary preliminary steps taken for procuring materials by contract, and commencing the work at the opening of the ensuing season; plans and estimates have been prepared and submitted for the light-house on Pumpkin island, the construction of which has been delayed in consequence of not being able to find an owner who can give a good title to the site selected for this object; fog-bells have been placed at Cape Elizabeth, Whitehead, and Petit Menan light-houses; beacons have been commenced or completed on Haddock's ledge, Logy's ledge, Willey's ledge, in the Kennebec river, entrance to Camden harbor, and between Owl's-head and Whitehead light-houses, and on Buck's ledge; buoys have been procured and placed, or are in course of construction, for the Eastern and Western Sisters, a large number in the Kennebec river, on Old Man's ledge, in Narraguagus harbor, at Goldsborough, in Muskongus bay, and east of Boon island; besides which, all the light houses in the district have been visited and inspected, and the necessary ordinary repairs made to towers, buildings, and illuminating apparatus, in all cases which would warrant the required expenditure.

In the second district, embracing the entire coast of Massachusetts, which includes Boston bay, Buzzard bay, Vineyard sound and tributaries, Commodore John Downes, United States navy, who was succeeded by Lieutenant S. R. Knox, United States navy, as inspector, and Major C. A. Ogden, United States corps of engineers, charged with the construction and repair of various works in the district, in addition to the ordinary routine duty of keeping the buoys in their proper positions; raising, cleaning, painting, and replacing them at the proper times, &c.; making the ordinary repairs to light house towers, buildings, and illuminating apparatus, and keeping the numerous light-vessels at their stations in an efficient condition, sites have been selected, and plans and estimates submitted for erecting the light-house at Bass river, and for three small light-houses at Holmes' Hole harbor. Preliminary steps have also been taken for maturing a plan for the light-house authorized to be pl ced on the "Sow and Pigs." A hydrographic and topographical survey of this

locality, with a report, has been furnished by the Superintendent of the Coast Survey. The beacons in Newburyport harbor have been rebuilt, or are in course of repair. All the buoys authorized for Newburyport harbor, Bibb Rock, Great Rip, Sand Shoal, Point Gammon, and Taunton

river have been placed, or are ready to be placed.

On the 31st day of August, 1852, an appropriation of \$50,000 was made towards the erection of a light house on the Outer Minot's rock; and by the 4th section of the act making appropriations for light-houses, &c., approved March 3, 1853, it was enacted, "That the Secretary of the Treasury is hereby authorized to select, instead of the Outer Minot's ledge, any more suitable site amongst the Cohasset rocks, entrance of Boston harbor, if in his judgment, on a further survey, a more suitable site can be found."

By direction of the department, the Superintendent of the Coast Survey has been engaged during the past season in making the necessary hydrographical surveys; and where the reports are received and the site is determined upon by the department, it is desirable that this important

work should be commenced.

The act making the appropriation provides that the light-house shall be built upon a plan to be approved by the Topographical bureau, which plan, it is understood, has been submitted to the honorable Secretary of

the Treasury.

In the third district, embracing the coasts of Rhode Island, Connecticut, New York, part of New Jersey, and including Long Island sound and Lake Champlain—Lieutenant S. F. Blunt, United States navy, who was succeeded by Lieutenant A. L. Case, United States navy, inspector—the usual routine duties relating to the care of buoys, the inspection of light-houses and light vessels, &c., has been performed.

Upon the application of the board to the Engineer department, Major Richard Delafield and Lieutenant W. S. Rosecrans, of the United States corps of engineers, were detailed to execute the works of construction, renovation, and repairs in this district. Both these officers were relieved during the past spring and summer by Major William D. Fraser and Captain George Dutton, of the same corps, who have since been dis-

charging the duties.

The work authorized for the preservation of the Goat Island lighthouse, in Newport harbor, commenced by Lieutenant Rosecrans, devolved upon Captain Dutton, under whose superintendence it has been completed. The small light authorized at the last session of Congress to be placed on Lime rock, in Newport harbor, has been commenced by Captain Dutton, and will be ready for lighting at an early day. as the site for the light authorized to be placed on Long Wharf, New Haven harbor, Connecticut, was obtained, the work was put under the direction of Major Fraser, who is expected to complete it this season. Major Fraser submitted, and is now engaged in the execution of, a plan for the preservation of the site of Execution Rock light-house, for the safety of which there was some apprehension. Plans and estimates were prepared and submitted by Major Delafield, in May last, for the three small lights authorized to be placed on the Hudson river; but the execution of the work has been delayed for the want of a good title to the sites, the cession of jurisdiction over which was obtained at the last session of the legislature of New York. The sites for the light-house at Point at

Roche; two beacon lights near Point Comfort, New Jersey; two beaconlights to mark the main channel in New York bay; and two beacons on Staten island, to serve as range lights for the Swash channel, New York bay, have been selected, the land purchased, and the deeds for the same are in the hands of the district attorney; cessions of jurisdiction over the sites having been obtained from the respective State legislatures. The work at these several places will be commenced so soon as the deeds for the sites are received and approved by the Attorney General, in conformity to law. The two lights authorized for Set off point and Elbow Beacon have been placed, and the other works in that locality are The site for the light house authorized to be placed on the north point of Gardiner's island has been obtained, with the cession of State jurisdiction, and approved plans and estimates have been submitted, and the work will be commenced at the earliest practicable moment. The beacon authorized for Sag harbor will be commenced at the opening of the ensuing season. The buoys authorized to be placed in the Hudson river, between Albany and Troy; Stoney Brook harbor, in the bay of New York; Narragansett bay, and New Haven harbor, have been procured and placed in their proper positions. The sites for beacons and buoys authorized for Connecticut river, below Middletown, have been selected, and the necessary instructions given for placing the latter without delay. For the sites of the three beacons proposed for that locality the action of the legislature will be required before the construction can be commenced.

In the fourth district, embracing part of the coasts of New Jersey, Delaware, Pennsylvania, and Virginia, including Delaware bay and river—Lieutenant Charles H. McBlair, United States navy, inspector—in addition to the ordinary works of inspection and repair of light-house towers, buildings, illuminating apparatus, and light-vessels; raising, cleaning, numbering, painting, and replacing buoys, &c.; the buoys authorized for Delaware bay, Joe Flogger shoal, Chincoteague inlet, Metompkin inlet, Barnegat inlet, and Absecum bar, have been procured or placed, or are in course of construction; and new illuminating apparatus have been procured and placed in Cape Henlopen and Cape May light-houses.

The work authorized for the preservation of the foundation of the Brandywine Shoal light house has been prosecuted towards completion, under the superintendence and direction of Major Hartman Bache, United States corps of topographical engineers, by whom this important and creditable work was planned and executed some years since. A valuable report upon the aids required to render the navigation of the Delaware bay safe and easy, has also been furnished by this officer, which will be

submitted in the more detailed report from this office.

In the fifth district, embracing the coasts of part of Virginia, Maryland, and part of North Carolina, including Chesapeake bay and tributaries, Albemarle and Pamlico sounds—Lieutenant A. M. Pennock, United States navy, inspector—in addition to the ordinary routine of duties of inspections, executing necessary repairs on light-house towers, buildings, illuminating apparatus and light-vessels, and the care and preservation of the buoys in the district, all the buoys authorized for the Potomac river, Rappahannock river, and other tributaries to Chesapeake bay, have been procured and placed, or are in course of construction. All the buoys authorized for the sounds of North Carolina have been pro-

cured and placed in their proper positions, and the old ones in those waters reset. The board has had the valuable services of Lieutenant Colonel R. E. De Russey, United States corps of engineers, in making examinations, plans, and estimates for repairs of light-houses in Chesapeake bay; and of Captain D. P. Woodbury, of the same corps, for works in Albemarle and Pamlico sounds. The site for the light house authorized to be placed at the mouth of Pungoteague creek, Virginia, has been selected, and plans and estimates submitted by Major Hartman Bache, United States corps of topographical engineers, which have been approved, and the necessary steps authorized to be taken by that office for the commencement of the work at the earliest practicable day. The cites for three beacon-lights and one day beacon, authorized to be placed on James river, were selected by Major Bache, who submitted plans and estimates for the same in July last. Proposals for building the above lights and bacon were issued by the board, and the lowest bid received was accepted; and the contract will be executed and the work commenced as soon as the title to the sites is approved by the Attorney General. The site of the light-house authorized to be placed on Jordan's point, James river, has been selected, and plans and estimates made by Major Bache, which are approved and the land purchased. When the deeds are obtained and approved, the necessary steps will be taken for commencing the work. The site for the light-house authorized to be placed on Jones' point, near Alexandria, Virginia, has been selected and marked, and the board is now negotiating with the owners for the purchase of a suffi-

cient quantity of land for light-house purposes.

Two appropriations have been made for the erection of a light-house on the Seven-foot knoll, at the mouth of the Patapsco river. A contract was entered into by the department, prior to the organization of this board, for the erection of a light house at that point for the whole amount of the appropriations. The contractors having failed to obtain the proper foundation for the structure, owing to difficulties encountered by them, they submitted a proposition for a modification of the contract a short time before it would expire by its own limitation; but before any action could be taken by this board to enable the department to decide upon the proper course to be pursued, the time specified in the contract for completing the work expired, since which time nothing has been done, as the season is not suited to the prosecution of such a work. is however proposed, with the approbation of the department, to recommence this work upon a proper plan at the opening of the ensuing spring. Congress, at the close of its last session, made an appropriation of \$15,000 for elevating the light-house tower at Cape Hatteras, and for substituting a first order lens light in place of the present reflecting apparatus. The illuminating apparatus designed for this tower was ordered immediately after the passage of the law, and received during the past summer. It is now, by the courtesy of the department, on exhibition in the Crystal Palace at New York. As soon as the lantern necessary to receive it, which was contracted to be delivered on the 15th ult., is completed, and the tower elevated, it will be placed as designed under the superintendence of Captain Woodbury, United States corps of engineers, who hopes to be able to finish the works during the ensuing winter. This magnificent specimen of art, acknowledged to be the most perfect of its kind, it is believed, could not be more appropriately

placed than in the position for which it is designed, to warn the mariner in approaching the dangerous shoals off Cape Hatteras, which have so long been the terror of seafaring men. One of the great difficulties in elevating light-house towers for the purpose of substituting improved illuminating apparatus, is that of keeping up the existing light while the work is going on; and at no point upon our coast will it be more important to prevent the extinguishment of the light for a single night than at Cape Hatteras; and Captain Woodbury will make the necessary arrangements to obviate this difficulty. Fishing Battery light-house, at the head of Chesapeake bay, has been completed and lighted since the date of the last report; and the small lights authorized to be placed on Fort Carroll, Patapsco river, will be temporarily erected, as soon as the lighting apparatus is received, (now daily expected,) upon the plan submitted by Captain Henry Brewerton, of the corps of engineers.

In the sixth district, embracing the coasts of part of North Carolina, South Carolina, Georgia, and part of Florida—Captain D. P. Woodbury, United States corps of engineers, inspector—in addition to the ordinary routine duty of inspection, repairs to light-house towers, buildings, light vessels, and illuminating apparatus, raising, cleaning, painting, numbering and replacing buoys, the following special works have been placed under the charge of the inspector: The light-house on the upper jettee, Cape Fear river; light-house on Bogue banks; three beacon-lights at Georgetown, S. C.; beacon on Morris island, Charleston harbor, and a new light-house off Cape Romain. Plans for all of these works are in progress; and as soon as the necessary preliminary steps in regard to the selection of sites, obtaining deeds and cessions of jurisdiction, are completed, the works will be commenced and prosecuted vigorously.

The light authorized to be placed on the battery at Charleston, for which a plan was submitted by Captain A. H. Bowman, corps of engineers, is now in charge of Captain J. Gilmer, of the same corps, by whom the work will be commenced as soon as the legislature of the State

grants the necessary jurisdiction over the site.

An appropriation of \$10,000 was made for the preservation of the site of the light-house at the mouth of the St. John's river, Florida. Lieutenant Wright, of the corps of engineers, was detailed to proceed to that point and make the necessary examinations; and the Superintendent of the Coast Survey was instructed by the department to have the necessary hydrographical surveys executed, in connexion with this and another appropriation made in the River and Harbor bill. Before these surveys and examinations were completed, it was ascertained that the title to the site of the light-house was in dispute, and no further expenditures will be made until a perfect title to the site is obtained. Upon the report of this board, the department referred the question of validity of title to the United States district attorney of Florida, from whom no report has yet been received. A recent report of Lieutenant J. Newton, corps of engineers, upon the condition of the site of this light-house, states that it is in danger of being entirely destroyed, and suggests whether it would not be better to select a new site than to resort to the temporary expedient of protecting the present one.

In the seventh district, embracing the coast of Florida from Musquito inlet to Egmont key—Lieutenant George L. Selden, United States navy, inspector—has been but recently placed in charge, in consequence of the

difficulty encountered in securing at an earlier day the services of an officer for that district. The important engineering works of this district have been chiefly in charge of Lieutenant G. G. Meade, United States corps of topographical engineers. Lieutenant H. G. Wright, United States corps of engineers, has also rendered important services in making

plans and estimates, and superintending repairs in this district.

The light-house at Sand key, constructed under the direction of the Bureau of Topographical Engineers, under the charge of Lieutenant Meade, was completed and lighted on the 20th of July last. This, one of the most important lights on the coast of the United States, constructed upon a plan comparatively novel in this country, and upon a site presenting many difficulties to the engineer, has been completed in a manner most creditable to the energy and ability of the officer in charge. It is fitted with a first-order lens, on the system of Fresnel, which has no rival on this continent, except the apparatus now on exhibition at the World's Fair in New York, designed for the Cape Hatteras tower.

Lieutenant Meade has prepared and submitted, or has in course of preparation to be submitted in a short time, reports, plans, and estimates for the following works authorized for this district, viz: For the first-class light on the Florida reef, at the point known as Cossin's patches; for a pile foundation light-house for the northwest passage, near Key West; for a light-house to be constructed on Sea horse, one of the Cedar keys; and for a beacon on Rebecca shoal, to mark the channel between the Tortugas islands and the keys on the coast of Florida. These works, it is believed, will all be commenced during the present season, and prosecuted with every means compatible with true economy. A firstclass light-house was authorized at the last session of Congress to be placed in the vicinity of Jupiter inlet, Florida, to serve as a seazoast light, and also to guard mariners in approaching the dangerous shoal lying off that point. This point being inaccessible for all useful purposes by land, and difficult to be reached by sea for want of harbors in its vicinity, some delay may ensue in marking the proper site and obtaining a proper title to it. The act of Congress ceding swamp lands to this and other States, without making reservations for light-house purposes, renders this duty complicated and causes delay.

The attention of the inspector of the district has been given to the few, though important, buoys within its limits, and which had for a long time previous to his arrival in the district been a source of much, and it is believed just, complaint on the part of navigators in that quarter. Careful inspections and examinations have been made of the towers, buildings, &c., of light-houses, &c., in the district, and such repairs made as a wise economy, having due regard to the efficiency of the

service, demanded.

The light-vessel stationed at the northwest passage, near Key West, was removed from her station, repaired, and restored to her position in an unusually short space of time, and at a mere nominal expense, compared with what from previous representations it was supposed would be required.

The isolated positions of the different light houses along the Florida reef and keys, and the dangers by which they are surrounded, render the duties of the inspector more than usually arduous and hazardous;

while the sparse population of the country, and the few facilities for communicating with the interior, and the consequent difficulties attendant upon the procurement of materials, labor, and supplies of all kinds, render this service very expensive, compared with that of the more northern districts.

In the eighth district, embracing the coast of part of Florida, Alabama, Mississippi, and part of Louisiana—Captain D. Leadbetter, United States corps of engineers, inspector—in addition to the usual routine duty of raising, cleaning, painting, numbering, and replacing buoys, inspecting, repairing light-house towers, buildings, light-vessels, and illuminating apparatus, the work has been more than ordinarily heavy and various in character, in consequence of the great damage done to the light-house towers, dwellings, sea-walls, &c., by the hurricanes of 1852. The labor, time, and expense necessarily required in the execution of these repairs, has been greatly increased by the bad quality of the work as it was previously done.

There are special appropriations for the re-erection of the light houses at St. Blas, Florida, and Chandeleur island, Louisiana, to replace those destroyed by hurricane; for the erection of a light house at East Pascagoula; for a light house at the Pass à l'Outre, Mississippi river, the necessary steps for the construction of which have been delayed by the prevalence of the fatal epidemic in this quarter before referred to, and in some of the cases for want of titles and jurisdiction and of proper

information in regard to sites.

The four beacons authorized for Sand island, Mobile point, and on Revenue point, have not been erected in consequence of material changes, as has been reported, having taken place in the channels for which they were designed as guides, since the survey made by the officer charged with that duty, under the direction of the Superintendent of the Coast Survey. This difficulty, however, will be obviated, it is hoped, during the present season. The beacon authorized at the last session of Congress to be placed on a shoal in Mobile Bay channel, was completed early in the past season. The light house authorized to be placed on Ship island has been completed, the illuminating apparatus set up, and the inspector has been instructed to give the proper notice to mariners, and have it lighted without unnecessary delay.

The floating bell buoy authorized for the entrance of Mobile bay is in course of construction under contract; and all the other buoys authorized for this bay, the different passes in the vicinity, and for the mouths of the Mississippi, are now in course of construction at the navy yard, Washington, D. C. This office has also authorized the placing of twelve spar buoys to mark the southwest pass of the Mississippi, upon the recommendation of Major Beauregard, United States corps of engineers, charged by the War Department with works of improvement, of harbors, &c., at that

point.

The light-house authorized to be placed at East Pascagoula, Mississippi, will receive the earliest attention of the board, after the report and survey asked of the coast survey, for the purpose of determining the proper site, shall have been received.

Major W. H. Chase, United States corps of engineers, under instructions from the War Department, made important examinations, and submitted a detailed report and estimate to this office, on the repairs and improvements of light-house buildings in this district, previous to Captain

Leadbetter's assignment to duty on that station.

The board regrets to state that the latest intelligence received of Captain D. Leadbetter reports his illness at New Orleans from an attack of yellow fever, from which cause his report of the operations in his district is unavoidably delayed.

In the ninth district, extending from Barataria bay, Louisiana, to the Rio Grande, Texas—Lieutenant Montgomery Hunt, United States navy, inspector—the lights at Bolivar point, Matagorda island, Point Isabel, and

Padre Island beacon, have all been completed and lighted.

The three lights authorized to be placed in Galveston bay, on Half-moon shoal, Red fish bar, and Clopper's bar, are under construction by contract, and will, it is hoped, be ready for lighting by the time the illuminating apparatus is received from France, which has already been shipped.

Special attention has been given by the inspector to the buoyage of Galveston bar and bay, and of Matagorda Island bar; this duty having been previously greatly neglected for want of the necessary information

on the part of those charged with the care of these buoys.

The light authorized for Aransas pass, Texas, has not yet been commenced, in consequence of the difficulty of obtaining a proper foundation at the most desirable point. The Superintendent of the Coast Survey, to whom the subject was referred, has caused two hydrographic surveys to be made of the locality at different periods, each one accompanied by a report from him, showing, among other things, the changes of the channel and bar that had taken place during the interval which elapsed between the times of making the two surveys. It only remains to obtain the services of a competent engineer officer, to be furnished with copies of these charts and reports, under instructions from this office, to visit the locality and determine the practicability of erecting a proper structure for light-house purposes; and, by request of this office, the Engineer department has detailed an officer for that service.

An appropriation was made at the last session of Congress for the erection of a first-class light-house at the mouth of the Sabine river, Texas. The necessary survey and report, by the Superintendent of the Coast Survey, have been received; and it is designed to instruct Captain Leadbetter, United States corps of engineers, to visit the locality for the purpose of marking the precise spot, and determining as to the proper kind of structure, and to submit a plan and estimates for its construction. It is hoped that both these works will be commenced during the present

season.

An appropriation was made in 1852 to enable the Superintendent of the Coast Survey to have the necessary examinations and surveys made for the purpose of determining the proper site for a light-house on Ship shoal, a dangerous obstruction to navigation lying in the track of vessels passing between the different ports along the Gulf.

An appropriation of \$20,000 was made at the last session of Congress towards the erection of the proposed light on "Ship shoal," and to serve as a substitute for the light-vessel now placed to mark that point. The necessary plans, &c., will be prepared when the report of the authorized

surveys shall have been received.

The few facilities to be found on this coast for visiting the different

points on which aids to navigation are placed, renders the service of inspection, repairs, &c., arduous and expensive. The same difficulties which were encountered on the Florida, and other portions of the Gulf coast, in procuring materials and labor for repairs and supplies to meet cases of emergency growing out of the casualties of the service, have been met with in this district. Buoys, of the best description that could be procured, have been placed by the inspector at important points in the district, to be replaced by those now in course of construction at the navy yard at Washington, D. C.

The light vessel, originally designed to mark the channel over Galveston bar, has been thoroughly repaired under the personal superintendence of the inspector; and since the abatement of the epidemic at Galveston, during the prevalence of which the corporate authorities of Galveston were, upon their application, authorized to use her for hospital and quarantine purposes, has been restored to her station inside of the bar. The usual routine of inspection, repairs, &c., of light houses, &c., has been performed by the inspector of this district up to the time of his attack of yellow fever; and since his recovery he has been permitted to absent himself temporarily from his station.

The tenth district, embracing Lakes Erie and Ontario, and the rivers Niagara and St. Lawrence, is under the charge of Captain J. C. Woodruff, United States corps of topographical engineers, as inspector.

The ordinary duties of inspection, repairs of light-house towers, buildings, sea walls, illuminating apparatus, placing, raising, cleaning, painting, numbering, and replacing buoys, &c., have been performed. The additional duties of receiving and distributing the annual supplies for all the light houses on the lakes also devolved upon this officer, with the assistance of the superintendent of supplies appointed by the Treasury Department; and it is proper to add, that this latter service was performed at a much less expense than has been incurred in previous years.

Numerous important works are authorized in this district; among which, the light-house now in course of construction, under a contract with the Treasury Department, on "Horse-shoe reef," Niagara river, may be classed, not only the first in date of appropriation, but also of importance. This work was placed under the superintendence of the inspector upon his assignment to duty in that district; but from the terms of the contract, but little control can be exerted over the contractor. The plan is novel in its character, and the time of the completion of the structure, it is understood, has been indefinitely extended by the department.

The beacon-light authorized for Black Rock has been completed and

lighted.

The appropriation for the beacon of solid masonry to be placed on a reef lying in the track of vessels in the west end of Lake Erie, near the south shore, off Bois Blanc, has been for some time under construction,

and it is expected will be completed before the winter sets in.

Plans and estimates have been submitted by Captain Woodruff, and approved by the board, for erecting a light on Carlton head, and for rebuilding Tibbett's Point light-house, and the necessary instructions given to enable the inspector to execute the work at the earliest practical moment. The preliminary steps for securing a proper title to the site of the Carlton Head light have been taken, cession of jurisdiction having been obtained at the last session of the legislature of New York.

No steps have been taken towards the erection of a fog-bell or whistle, to be worked by machinery, to be placed on the south pier near the light-house at Buffalo, in consequence of the unsatisfactory performance of those recently erected at points on the coast of Maine, in conformity to special acts of Congress. So soon as the machinery for these bells can be sufficiently perfected to meet the wants of the service, directions will be given for placing the one authorized at this point without delay.

The aids authorized for the mouth of Maumee river have received the attention of the inspector; and some progress has been made towards the preparation of plans adapted to the wants of navigation at this point.

So soon as they are perfected the work will be commenced.

On the 3d of March, 1851, an appropriation was made for the erection of a light-house on Green island, Lake Eric; but, in consequence of difficulties in obtaining a valid title to the site, no steps could be taken for commencing the work until late in the past season. Plans and estimates have been submitted and approved, and instructions given for

contracting for the execution of the work.

The repairs authorized at Oswego were commenced, under instructions from this board, by Lieutenant W. B. Franklin, corps of topographical engineers, and, upon his being detailed for other service, the completion of the work was assigned, with the consent of the Burcau of Topographical Engineers, to Lieutenant Colonel William Turnbull, of the same corps; and the last report from this officer states that difficulties not anticipated had prevented the completion of the work this season. This work will be resumed at the earliest practicable moment in the ensuing season.

The works authorized at the mouth of Genesee river have been commenced under the direction of Captain Woodruff, and, it is presumed,

are by this time completed.

The eleventh district, embracing Lakes St. Clair, Huron, Michigan, and Superior, and Green bay, and their tributaries, is in charge of Captain L. Sitgreaves, United States corps of topographical engineers. In this district the lights at Marquette, Ottowa point, and at Twin Rivers, have been lighted since the date of the last report.

Buoys authorized for Saginaw bay and in Neenah or Fox river have

been procured and placed in their proper positions.

In addition to the ordinary routine duty of inspection, repairs of lighthouse towers, buildings, illuminating apparatus, &c., raising, cleaning, painting, numbering, and replacing buoys, &c., the attention of the inspector has been given to the visiting of points upon which light-houses are authorized to be placed, for the purpose of furnishing the requisite information for obtaining the necessary reservations of the public land in cases in which they are to be located on the public domain, and for procuring from individuals the proper quantity of land, and obtaining valid titles thereto, in those cases in which the titles reside in private individuals or companies.

Owing to the short period of time during which operations of this character could be carried on in this district, and the great difficulty of reaching the isolated points upon which these lights are to be placed, as rapid progress has not been made as could have been desired; but, with one or two exceptions, sufficient information has been furnished, it is believed, to enable this office to obtain the required reservations.

Plans for several of these structures have been submitted by the inspector, and during the winter proposals for contracts will be issued for the construction of all the lights authorized for this district in the

ensuing spring.

The Eagle River light house, for which an appropriation was made September 28, 1850, was not constructed up to the date of the last report from this office, for want of proper jurisdiction over the site; this, however, was obtained at the last session of the legislature of Michigan, and the inspector was directed to proceed with the construction of the tower without unnecessary delay. The report of this officer not having been received, the exact state of the work cannot be stated at this time.

Efforts have been made to procure from the owners of the land in the vicinity of Milwaukie the quantity necessary for the site of the lighthouse which Congress authorized to be removed from its present location

in that city. So far they have not been successful.

The appropriation for repairing the light-house pier, &c., at Huron and Vermillion, have been placed in the hands of Capt. H. Stansbury, United States corps of topographical engineers, with the consent of the chief of that bureau, reserving only a sufficient sum from each appropriation to provide the necessary illuminating apparatus and to pay for the necessary repairs upon the towers.

The board understands that the works contemplated by the acts ma-

king the appropriations are in progress towards completion.

Examinations have been made and reports submitted by Captain A. Canfield, United States corps of topographical engineers, with reference to the removal and repair of the light-houses at the mouth of Clinton river; but no work has been done, in consequence of the condition of the pier on which it is situated. This officer reports that it will not be necessary for the interests of navigation that the light-house be removed

from its present location.

The work on the light-house and pier at Chicago, Illinois, are under the superintendence of Lieut. Webster, of the corps of topographical engineers, and under the direction of that bureau. This officer, in his report to that bureau, September 1, 1853, states that the pier head put down for the foundation of the light-house is sufficient for the purpose for which it was designed, and that "the light should be one of the first class for the lakes," which is equivalent to the third order lens at "Wagooshance," and that it is very much needed, as the present one is very imperfect and altogether insufficient.

The twelfth district, embracing the whole of the Pacific coast of the United States, is in charge of Capt. H. W. Halleck, United States corps of engineers, as inspector. On this coast there are eight light-houses contracted to be built under authority of the late Secretary of the Treasury, the supervision of which was transferred to this office December 22, 1852, and the inspector was assigned to their superintendence early in the year. The latest reports on the subject announce the completion of the light-house towers on Alcatraz island, and at Fort Point, Bay of San Francisco, Point Pinas, (Monterey,) and on the Farrallones island.

The contractors having despatched their vessel to Oregon for the purpose of commencing the light upon Cape Disappointment, she was

wrecked and totally lost at the mouth of the Columbia river.

Of the number of light-houses contracted to be built on this coast, four remain to be commenced, viz: Cape Disappointment, Point Con-

ception, San Diego, and Humboldt harbor.

The illuminating apparatus for these eight light-houses was contracted for in Paris, by Lieut. W. A. Bartlett, United States navy, who was sent to France for that purpose by the late Secretary of the Treasury, under special instructions from that office. The illuminating apparatus for the two lights in San Francisco bay has been for some time in San Francisco, and according to the terms of the contract entered into by the manufacturers with Lieut. Bartlett, the remaining six should be shipped at an early day, if they have not already been sent to their destination. Although this officer is not under the orders of this board, he has been frequently called upon, during the past year, to procure information for the light-house establishment, which he has promptly furnished. He has also given his attention to illuminating apparatus ordered from the manufacturers in Paris for lights on the Atlantic, Gulf and Lake coasts.

By the last account from San Francisco, it appears that the officer charged with setting up the illuminating apparatus has not been able to procure competent persons to perform that service at the Alcatraz light; and the engineer officers charged by the War Department with the works of fortification at Battery point have been compelled to remove the lighthouse tower from that point, to enable them to carry on their work. As it is presumed that legislation will be required in relation to this latter light, a more detailed account will be given in the report of this board, to enable the department and Congress to act understandingly

on the subject.

An appropriation was made at the last session of Congress for the erection of a light-house on Point Bonita, entrance to Bay of San Francisco. The subject, in conformity to law, was referred to the Superintendent of the Coast Survey for an examination, survey, and report upon the site. The site has been selected, and the collector and superintendent of lights at San Francisco has been requested to obtain the necessary information in reference to the validity of the reservation of that point by the United States for light-house or other purposes. So soon as a valid title is obtained, and receives the approval of the Attorney General, it is proposed to lose no time in commencing the erection of this light-house.

The remaining points on this coast for which appropriations have been made for the erection of light-houses have been referred through the department to the Superintendent of the Coast Survey, for the selection of the sites, &c., which it is presumed will be furnished at an early

day.

The buoys authorized at the last session of Congress for San Francisco bay and its tributaries, for Humboldt bay, Umpqua, and the Columbia river, are now in course of construction at the navy yard at Washington, D. C., and will be shipped to their destinations as soon as they are completed.

Efforts were made to have some of these buoys constructed in the vicinity of the localities for which they were designated, but without

success.

In addition to the foregoing works enumerated in the several districts, the two first-class light-vessels, with their illuminating apparatus, moor

ings, &c., have been completed and sent, respectively, to New Bedford, Massachusetts, and Smithville, North Carolina; the one to be placed off the South shoals of Nantucket, and the other on Frying Pan shoals, (Cape Fear, North Carolina,) as soon as they receive their officers, crews, and outfits.

Five other light-vessels—three of the first, and two of the second class—are now in course of construction, and will be ready in a short time, it is believed, to be sent to their respective stations at Sandy Hook, New York; Minot's ledge, Massachusetts; Rattlesnake shoal, off Charleston, South Carolina; and Succonnesset shoal and Killpond bar, Vineyard sound, Massachusetts.

The four iron bell-buoys authorized, respectively, for Flynn's knoll, (harbor of New York;) for Cape Romain shoals, South Carolina; Middle Ground shoal, (Charleston, South Carolina,) and for the entrance to Mobile bay, are in course of construction, and will be sent to their sta-

tions before the close of the present season.

In addition to the new illuminating apparatus recently constructed, and placed in the seacoast lights at Capes Henlopen and May, orders have been given for the construction of new illuminating apparatus for the important seacoast light at Fire island; at Execution Rocks; Princess bay and Cumberland Head, New York; and at Juniper island, Vermont.

The necessary orders have also been given for constructing the proper illuminating apparatus for all the light-houses authorized by Congress to be built, which it is believed will be ready by the time the work of

construction of the towers and buildings is completed.

The annual supplies for the southern coast for the current year are about being despatched from New Bedford, in the two supply-vessels "Guthrie" and "Eliza." Immediately on the return of these vessels from the coast of Florida and the Gulf, the annual supplies for the remaining portions of the coast will be despatched by them.

An appropriation was made 31st August, 1852, for testing the apparatus of Wilson and Meachum for illuminating light-houses, "to be ex-

pended under the direction of the Secretary of the Treasury."

By direction of the late Secretary, this appropriation was placed in the hands of Mr. Wilson, upon his giving the security required by the department, for the faithful execution and delivery of the apparatus for the use of the government.

No report has been received on the subject. Preliminary arrangements have been made for executing the law authorizing the plan of Charles

Babbage, esq., for distinguishing lights, to be practically tested.

Under the authority of the act appropriating \$250 for testing the adaptation of Jabez Stone's patent buoy, as a guide to rivers and other narrow channels, two buoys were procured and placed in the Potomac river, at points which could be readily inspected at short intervals; but after remaining for some time down, and the distinguishing marks being destroyed, they were taken up, and are now in the possession of Captain Henry Brewerton, of the corps of engineers, for further test, in the prosecution of his duties in the Patapsco.

Failing to obtain satisfactory bids for constructing the iron buoys authorized and required for the southern coast and on the Pacific, upon application through the department, permission was granted by the Secretary of the Navy to have such number made at the Washington

navy yard as were required, to be paid for out of the respective appro-

priations.

Permission was also given by the Navy Department to have the requisite quantity of chain-cable, and number of anchors for the seven light-vessels before referred to, constructed at the Washington navy

yard, upon the same terms.

The department is also indebted to the courtesy of the Navy Department, in permitting this board to have work done at the New York and Boston navy yards, which it was found difficult to have done elsewhere in a proper manner and upon reasonable terms; to which should be added the obligations of this board to the same department for the circular requiring commanders of navy yards and vessels to afford every facility to the light-house inspectors in the performance of their duties, which is not inconsistent with the interests of the particular branch of the public service committed to their charge.

The board takes pleasure in making its acknowledgments to the War Department, and to the two engineer bureaus under its control, for the valuable and prompt assistance afforded by the detail of officers of engineers to execute the works of repair, renovation, and construction connected with the light-house establishment, as contemplated by the

acts of Congress.

The Superintendent of the Coast Survey, under instructions from the department, in conformity to law, has furnished surveys and reports upon various points upon which aids to navigation have been authorized to be placed; besides, much valuable information has been furnished by that officer relating to the geographical positions of light houses, beacons, &c., and copies of sketches in advance of publication, &c., &c.

The board has received numerous petitions, to be transmitted through the department to Congress, for the establishman of additional aids to navigation, which will be tabulated and submitted, which the detailed report of the operations of the light-house establishment during the present year, for the further information of the department and of Con-

gress.

This board takes pleasure in bearing testimony to the ability and zeal of the inspectors, of local superintendents, and of the officers of the two corps of engineers of the army, who have been the agents to execute the instructions, and to perform the various duties of the light-house establishment.

By order of the Light-house Board.

Very respectfully, your obedient servant, W. B. SHUBRICK, Chairman,

THORNTON A. JENRINS, EDMD. L. F. HARDCASTLE, Secretaries.

Hon. James Guthrie, Secretary of the Treasury.

# Supplemental Report of the Light-house Board.

TREASURY DEPARTMENT, Office of Light-house Board, November 29, 1853.

Sin: I have the honor to submit, by direction of this board, a report supplemental to the one transmitted from this office on the 19th instant, for the information of the department and for the consideration of Congress.

The reports of the inspectors on the southern coast, which had been delayed in consequence of the prevailing epidemic in that quarter, having been received, this office is now enabled to submit a detailed account of the services performed in the several districts, and which will be readily seen by reference to table A, hereto appended.

List B, hereto appended, exhibits some of the proposed improvements and increase of aids to navigation recommended in the general programme of the temporary Light house Board in its report submitted in 1852, and renewed in the annual report from this office, laid before

Congress at its last session.

Recurring to the two previous reports above referred to, in which it is recommended that though no effort should be spared to render all the lights and other aids to navigation authorized by Congress efficient, as rapidly as the means provided will permit, yet the improvement of seacoast lights and exterior aids to navigation is of paramount importance. The board takes this occasion respectfully to renew this recommendation, and ask its favorable consideration by the department and by Congress.

The additional appropriation asked (list B) for completing the light-house authorized to be built on Boon island, Maine, has been found to be necessary in consequence of it having been ascertained and reported by the engineer officer charged with the construction of that work, that the materials of the present tower and building are unfit for use in the construction of the new buildings. The former appropriation was based upon the assumption that, by using the materials of the present structure, the cost of the new ones would be greatly diminished.

Independently of the fact that the materials of the present buildings are not of a proper kind to be incorporated into the new buildings, it would be necessary, in order to make use of them, to extinguish the present light, which would greatly endanger life and property on that

coast.

The recommendation contained in the report of Major C. A. Ogden, corps of engineers, (see Appendix No. 7,) that the appropriation for iron spindles to be placed on the Graves and Harding's ledges, Boston harbor, be applied to the procuring and placing of a bell-buoy and triangle buoy to mark these dangers, meets the approval of this board; and the authority to apply the appropriations as recommended, is respectfully solicited.

The board would respectfully recommend to the favorable consideration of Congress the estimate submitted in list B for a light-house on the shoal off Smith's Point, Chesapeake bay, mouth of the Potomac river, as a substitute for the light-vessel now placed to mark the end of the shoal, and the light-house on the main land placed to mark the locality.

Should this appropriation not be made, a very large outlay will be

necessary for preserving the foundation of the light-house, and for rebuilding a new tower at an early day; and a sum of at least \$15,000 for a new light-vessel to replace the present one, which is very much decayed.

The annual expense of maintaining the proposed light-house, when constructed, would be much less than for the two aids now existing in that vicinity, while the former will prove a much more efficient and re-

liable guide to navigators.

The board would also respectfully invite the attention of Congress to the present condition of the light-house and site at the mouth of the St.

John's river, Florida.

The title to the site of this light-house being in dispute, together with the present dilapidated state of the tower, render necessary, in the opinion of the board, some action to prevent the possible extinction of the light at that point, which would prove a serious evil to the commerce of Jacksonville and of the surrounding country.

The sum estimated for in list B, in addition to the balance remaining in the treasury of the appropriation made August 31, 1852, for preserving the site of that light-house, would, if granted, be sufficient to purchase a more eligible site for a light-house and range-light, to guide in crossing the bar, than the present one. (See Appendix Nos. 39, 40 and 41.)

The board would respectfully invite the attention of Congress to the reports of Major Bache, corps of topographical engineers, and of the Board of Trade of Philadelphia, on the subject of providing the necessary additional aids to navigation in Delaware bay and river, and would state, that although it would appear there can be but little doubt as to the necessity for the aids suggested in these reports, yet, on account of the large appropriations which would be required to provide them, the board is not prepared to recommend all of them at this time, but would respectfully defer to Congress the decision as to which of these objects are of the most urgent necessity.

It is believed that the proposed substitution of a light house on Crossledge, in Delaware bay, for the light-vessel now stationed near that locality, would not only greatly improve the navigation of that portion of the bay, but, when completed, it would be maintained at a much less

annual expense than the light-vessel.

It is proper to add, in this connexion, that the best illuminating apparatus that could be procured in this country has been placed, during the last summer, in the light houses at Capes May and Henlopen. These are a great improvement over the old lights, and will answer a very good purpose until Congress may deem fit to make appropriations for the more approved apparatus with which it is designed ultimately to furnish these

two important points.

On the 30th April, 1852, a contract was entered into by the Treasury Department, with certain parties, for constructing eight light houses on the coast of California and Oregon, previously authorized by Congress, in which it was stipulated that \$31,000 should be paid for the construction of a light house at Cape Disappointment; and in a subsequent agreement, on the same day, between the same parties, that the additional sum of \$7,500 should be paid to the contractors for certain modifications in the originally designed structures for that locality; making \$38,500,

exclusive of certain incidental expenses for freight, &c., on a part of the

wood-work, &c.

The appropriation from which this sum must be paid, when the lighthouse at Cape Disappointment is completed, is in the following words: "For a light-house on Cape Disappointment, at the mouth of the Columbia river; one on an island off Cape Flattery, at the entrance of the Straits of Fuca; and one at New Dungenness; twelve iron can-buoys in Columbia river, and the transportation, erection, and placing the same, fifty-three thousand one hundred and forty dollars;" and "For fogsignals for the light-houses at Cape Disappointment, Cape Flattery, and New Dungenness, three thousand dollars." Total, \$56,140.

The buoys authorized in the foregoing act having been procured and placed by the Coast Survey, at a cost of \$4,620, it will be seen that there remains but \$13,020 for the construction of the lights at Cape Flattery and New Dungenness; a sum wholly inadequate to carry out the inten-

tion of Congress.

A sufficient additional appropriation for this purpose is therefore respectfully asked, which is believed, at the present prices of labor and

materials on that coast, should not be less than \$39,000.

The light-house authorized and built on Battery Point, Bay of San Francisco, having been taken down to make room for the works of fortification authorized by law at that point, an appropriation, it is believed, should be made for erecting a light of greater power than the one originally authorized for Battery Point, or Point Lobos, the outer entrance of the bay, and an estimate is accordingly submitted in list B.

Verbal representations having been made at this office, by persons familiar with the coast of California, that small lights are necessary to guide to the anchorages off the towns of Santa Cruz and Santa Barbara,

estimates have been submitted for those purposes. (List C.)

A petition addressed to the honorable Secretary of the Treasury, numerously signed by owners, masters, and seamen of vessels, and other citizens interested in the commerce and navigation of the lakes, for the discontinuance of the light-house at the mouth of Calumet river, which they represent as being a serious inconvenience, and greatly endangering life and property, from the fact that there is no harbor at that place, &c., having been referred to this office, it is respectfully submitted for the consideration of Congress. (See petition, Appendix No. 52.)

List C, hereto appended, exhibits the aids which have been represented to be necessary in order to render the navigation of the respective

localities safe and easy.

In this list reference is made to the communications contained in the appendix to this report, suggesting the necessity for the different appro-

priations asked.

This information is derived from the reports of light-house inspectors of districts; of engineer officers, who are familiar with the wants of the light-house service in the respective localities to which they refer; local superintendents of lights, whose attention has been called to the subject; and from individuals interested in commerce and navigation; whose representations it is believed are reliable, and entitled to the favorable consideration of Congress.

In all cases where additional aids to navigation have been recommended, (and which are embraced in list C<sub>2</sub>) unaccompanied by specific esti-

mates of cost, a sum has been attached to each, which it is believed will

be sufficient, if authorized, to complete the work.

By this means Congress will be enabled to determine without difficulty such objects as, in its wisdom, are of sufficient importance to warrant appropriations being made.

Very respectfully, your obedient servant,

W. B. SHUBRICK. Chairman Light-house Board.

THORNTON A. JENKINS, EDMD. L. F. HARDCASTLE, Secretaries.

Hon. JAMES GUTHRIE, Secretary of the Treasury.

### List B.

#### MAINE.

For rebuilding light-house and keeper's dwelling on Petit Menan island	<b>\$35,000</b>
(See Appendix No. 1.)  For rebuilding light house on Baker's island	5,000
(See Appendix No. 1.)  For rebuilding light-house on Franklin island (See Appendix No. 1.)	5,000
For procuring illuminating apparatus, and completing light-house tower and buildings authorized to be built on Boon island (See Appendix No. 1, and body of report.)	14,973
MASSACHUSETTS.	
For continuation of work on foundation and light-house buildings on the rocks called "Sow and Pigs" - (See Appendix No. 7.)	30,000
For rebuilding light house at Gay Head, and fitting it with first order illuminating apparatus - (See Appendix No. 7.) That the sums appropriated March 3, 1851, and August 31, 1852, "for non spindles on the Graves and Harding's ledges, Boston harbor," be applied to the procuring and placing a bell and triangle beacons on these points.	30,000

#### NEW YORK.

For erecting a first class seacoast light house tower, and fitting it with the most approved illuminating apparatus, 35,000 near Great West bay, Long Island (See reports of Light-house Board, 1852 and 1853.)

#### NEW JERSEY.

NOW JURGET.	
For a first class light-house, to be fitted with the most approved illuminating apparatus, to be placed in the vicinity of Absecum inlet, to guide navigators clear of Absecum and Brigantine shoals  (See reports of Light-house Board of 1852 and 1853, and (Appendix No. 21.)  For erecting a permanent beacon to range with Charleston light, for crossing the bar, as a substitute for the present movable lantern  (See Appendix No. 34.)  For rebuilding the two beacons on Sullivan's island, and for building a keeper's house  (See Appendix No. 34.) (There never has been a keeper's house for these two beacons—the rent of \$200 per annum being paid for the use of one.)	\$35,000 1,000 6,000
FLORIDA.	
For the erection of a light-house and of a beacon-light, to serve as a range for the channel across the bar, in place of the present light-house at the mouth of the St. John's river, in addition to the balance of the appropriation approved August 31, 1852, for the preservation of the site (See reference to this subject in the body of the report, and also Appendix Nos. 38 and 39.)  For rebuilding on a proper site, and elevating and refitting with the most approved illuminating apparatus, the light-house at Pensacola (See Appendix No. 47.)	15,060 25,000 •
LOUISIANA.	
For a new light house at Port Pontchartrain, in the place of the present structure, which will not admit of being repaired  (See Appendix No. 44.)  For a new light house at Bayon St. John, in the place of	6,000
the present structure, which will not admit of being re- paired (See Appendix No. 44.)	6,000
For a new light-house at New Canal, in the place of the present structure, which will not admit of being repaired	6,000
(See Appendix No. 44.)  For a new beacon-light at Proctorsville, in the place of the one destroyed by fire November 24, 1853  (See Appendix Nos. 44 and 45.)	3,000

For a light on or near York spit, Chesapeake bay - (See petition and Appendix No. 26.)	\$15,000
For buoys at Green Point, Sandy Point, &c., in York river, (See Appendix No. 30.)	500
For a light-house on the shoals or Sandy Point, to mark the entrance to Cherrystone harbor (See Appendix Nos. 28 and 26.) For buoys to be placed in the Chesapeake bay, on the following points, viz: Fisherman's, Picket's Hole, Cherrystone, Pocomoke flats, Hunting creek, Deep creek, Chesconnessex, Onancock, Pungoteague, Naswadox, The Gulf, New Point Comfort, Peankatank river, Great Wicomico river, Rappahannock river, Drum Pointspit, near Stingray Point,	10,090
near Smith's Point light-vessel (See Appendix Nos. 26, 28, 29, and 30.)	1,30
For buoys and stakes in the Potomac river, between Alexandria and Georgetown (See Appendix No. 27.)	200
NORTH CAROLINA.	
For a light-house on Roanoke marshes (See Appendix No. 32, relating to petition to Congress, 512 citizens of North Carolina.)	10,000
For buoys for the following places: at "Neuse river," "Pamplico sound and river," "Ocracoke inlet," "Core sound," Beaufort harbor - (See Appendix Nos. 32 and 33.)  For a beacon-light on Federal Point, to range with the light- house on that point, and as a substitute for the light vessel at present stationed on Horse-Shoe shoal (See Appendix Nos. 34 and 35.)	1,640 800
SOUTH CAROLINA.	
For a light-house and beacon-light on the main land on North Edisto island	15,000
(See Appendix No. 37, and petition to Congress.) For buoys in North Edisto inlet and approaches (See Appendix No. 37, and petition to Congress.) For a light-house and beacon-light on the north point of Hunting island, to serve as a seacoast and range for the Swash channel, in the place of the light-vessel at present	500
placed off St. Helena, and that vessel to be removed to Courbakee bank	30,000
(See Appendix No. 37, and petition to Congress.)  For a day beacon or buoy in St. Helena sound  (See Appendix No. 37, and petition to Congress.)  For a first class light-vessel for Martin's Industry, in place of the present inefficient one, and for repairing the light-vessel years placed at Martin's Industry, and placing it	800
vessel now placed at Martin's Industry, and placing it (after the larger vessel is built) at or near the entrance to Calibogue sound (See Appendix No. 37, and petition to Congress.)	30,000

For two beacons to serve as a range for the entrance to Calibogue sound (See Appendix No. 37, and petition to Congress.)	\$5,000
For a small beacon-light on Fort Sumpter, Charleston nar- bor	1,000
(See Appendix No. 34.) For a light-house and beacon-light on or near Hilton Head to guide to Port Royal harbor entrance	10,000
(See Appendix No. 37, and petition to Congress.) For five iron buoys for Port Royal harbor	1,500
(See Appendix No. 37, and petition to Congress.) For buoys for St. Helena bar (See Appendix Nos. 34 and 37.)	1,500
GEORGIA.	
For iron buoys to be placed in the St. Mary's and St. Andrew's bays (See Appendix No. 34.)	2,090
FLORIDA.	
For buoys for the St. John's bar and river (See Appendix No. 38.)	2,000
For elevating, and fitting with the most approved illuminating apparatus, the light-house tower at Cape Florida (See Appendix Nos. 38 and 41.)	15,000
For iron buoys for Key West harbor and approaches (See Appendix No. 43.)	1,500
For a small beacon-light near or on Fort McRea, Pensacola (See Appendix No. 47.)	1,000
For two large iron buoys for Pensacola bar - (See Appendix No. 47.)	1,000
LOUISIANA.	
For a day beacon to be placed on the east end of Horn island (See Appendix No. 44.)	1,500
ALABAMA.	
For making permanent five range stakes, with lights, where required, at the Choctaw Pass and Dog River bar, Mobile (See Appendix No. 44.)	1,500
TEXAS.	
For a light-house on or near Gallinipper Point, Lavacca bay	10,000
(See Appendix No. 49.) For a light-house on or near Half-Moon reef, Matagorda bay (See Appendix No. 49.)	10,000

H. Doc. 3.	205
MICHIGAN.	
For repair of the light-house, and pier upon which it is placed, near Monroe, Michigan - (See Appendix No. 50, for report and estimate.) For completing foundations of two light-houses on St. Clair	\$6,000
flats (See Appendix No. 53.)	20,000
INDIANA.	
For a beacon-light on the pier or breakwater at Michigan City (See Appendix No. 51.)	1,000
ILLINOIS.	
For a beacon-light on the breakwater at Waukegan, (Little Fort,) in place of the present light-house (See Appendix No. 51.)	1,000
For buoys to mark the bar and harbor at Chicago -	300
(See Appendix No. 51.)  For a harbor light at the town of Santa Cruz, Bay of Mon-	
(Recommended at last Congress)	10,000
(Recommended at last Congress.) For a harbor light at Santa Barbara (See report.)	10,000

H. Doc. 3

Table exhibiting all the aids to navigation authorized by Congress prior to August 31, 1852, but which had not been completed at the date of the report of the Light-house Board of January 15, 1853, and also those authorized at the session of Congress which closed March 3, 1853, and the action in each case up to the date of this report, November 29, 1853.

State.	Locality.	Description of object.	Date of appropriation.	Sum appro- priated, or balance.	Action taken.
Maine	Ledge east of Boon island White and Thom's ledge and Pond island reef, Kenne- bee river.	Buoys	Sept. 28, 1850 Mar. 3, 1851		Buoy placed. Additional appropriation made—buoys either placed or procured for placing.
	Narraguagus (Pond Island) Nubble (Cape Neddick) or York harber.	Light-housedo	do Aug. 31, 1852	4,600 00 5,000 00	Completed and lighted April 18, 1853. Examinations and surveys unde of site under direction of Superintendent Coast Survey during the past season; construction will be commenced as soon as the site is reported.

# APPENDIX TO REPORT OF LIGHT-HOUSE BOARD.

No. 1.

PORTLAND, ME., November 22, 1853.

Sir: In obedience to the order contained in the circular of the Lighthouse Board on the subject of new structures, buoys, &c., as aids to navigation in this district, I have the honor to make the following report:

1. Petit Menan light-house.—This is the most eastern first class light on the coast of the United States. It is at present one of the worst of all the lights, and the tower is so badly built, and so old, and the lantern is so small, that little can be done to improve it; and all that could be done will not make it a light good enough for the important position of a first class seacoast light.

I therefore recommend that the tower and keeper's dwelling be rebuilt, and that there be a second order Fresnel lens apparatus placed in the new light-house. For this purpose an appropriation of \$45,000

will be necessary.

2. Baker's island light-house and Franklin island light-house.—These two are secondary lights. The towers of both are entirely worthless, the lanterns are worn out, and the keepers' dwellings are so old and leaky that they are unhealthy. I recommend that both be rebuilt and fitted up with Fresnel lens lights of the fourth or fifth order. For this purpose, an appropriation of \$10,000 will be required.

I select these two lights, not because they are absolutely the worst on the coast, but because a beginning must be made in rebuilding nearly all of the lights of this class on the coast; and these are important lights,

and are as bad as any.

3: Fog signal near Monhegan light house.—Vessels sailing eastward from Portland, in a fog, first make Seguin, where there is now a fogbell. They next make Monhegan island, but at that point there is no fog signal. If one were placed there, vessels could, after making this point, shape their courses for Whitehead, entrance of Penobscot bay, and after making that point (where there is a bell,) would be in the bay and comparatively safe. I think it of great importance that there should be a bell at Monhegan.

The light-house is so far from the point where the bell should be situated, that the light-keeper could not attend to it, and it will be advisable, therefore, to have a house built on which the bell might be placed; and a man should be appointed whose sole duty should be to take charge of the bell. The proper site for the bell is on a small island which lies off Monhegan, called Manana. For the house and bell, and

for purchasing the land, the sum of \$3,500 will be necessary.

I have obtained evidence as to the necessity for the erection of this

bell, and it is appended to this report.

4. Harbor light on breakwater, Portland harbor, Me.—The breakwater in this harbor is very much in the way of vessels entering the harbor, and a small light is needed on the end of it. If the board judge it necessary that a house should be built for the keeper on shore, an appropriation of \$3,500 will be necessary; but if a house be not required, \$1,000 will suffice. It might, perhaps, be well to have the house as a

store for supplies, &c., for the light. (See letters accompanying this

report, for evidence of the necessity of this light.)

5. Buoys, beacons, &c.—There is an appropriation of \$500 "for the beacon on Buck's ledge, Penobscot river." On account of ice in the spring freshets, and large rafts of logs that are floated down this river, nothing but a structure of the firmest kind should be erected at this point. One of cut-stone, of the size of the old one, will cost \$2,500. I have examined two other stone beacons in this river—one on Odom's ledge, and the other on a ledge, the name of which I do not know. Both have been moved several feet by the ice, and should be taken down and rebuilt. For this purpose \$1,000 will be required.

There are two stone monuments in this district which require repairs. One is in Casco bay, on Mark island, and the other is on an island at the mouth of Saco river; both are useful beacons, and should be repointed and overhauled thoroughly. For this purpose \$1,500 will be required.

For buoys, beacons, &c., on various important points on the coast of Maine, I recommend that \$2,000 be appropriated. The sum of \$3,000 appropriated by the last Congress, was required, not only for buoys at new points, but for replacing a great many which had been carried away during the preceding winter.

#### RECAPITULATION.

1. For rebuilding light-house and keeper's dwelling on Petit	
Menan island, Maine	\$45,000
2. For rebuilding Baker's island and Franklin island light-	
houses, and keepers' dwellings	10,000
3. For fog-signal hear Monhegan light-house -	3,500
4. Harbor light on end of breakwater at Portland harbor,	· · · · · · · · · · · · · · · · · · ·
Maine	3,500
5. Buoys, beacons, &c., and repairs -	7,000
	69,000

Very respectfully, your obedient servant,

W. B. FRANKLIN,

Light-house Inspector, First District.

Capt. E. L. F. HARDOASTLE,
Secretary to Light house Board,
Washington, D. C.

Bangor, September 12, 1853.

We, the undersigned, masters and pilots of the steamer Daniel Webster, steamer Penobscot, and steamer Boston, running between Bangor, Portland and Boston, and intermediate ports, would most respectfully represent that two very important points on this coast are neglected, and we would call your especial attention to them, to wit: the island of Monhegan and Portland harbor; that a fog-bell on the Manana island, a little island adjacent to Monhegan, and a bug-light on the end of the breakwater in Portland harbor, are two material points that are now very much needed by steamers and vessels on the coast of Maine; and we would

call your especial attention to them, and respectfully solicit your aid in

procuring this protection to navigation.

There are no two points on our coast, where the aid of government is so much needed as these two named, and we respectfully request that you will urge the attention of the Light house Board to these particular points.

Respectfully yours, Master of str. Daniel Webster. JOSEPH FARWELL, 1st Pilot RICHARD DONOVAN " .. ARCHIBALD G. SPEAR, 2d Pilot " THOMAS B. SANFORD, Master of steamer Boston. 44 1st Pilot WM. BLAKE, " 2d Pilot " WM. A. BEAN, Master of steamer Penobscot. WM. FLOWERS, 1st Pilot " S. G. FLOWERS. " 2d Pilot. DAVID H. STAPLES,

Lieut. W. B. Franklin, Light house Inspector, Portland, Maine.

PORTLAND, September 14, 1853.

DEAR SIR: The undersigned, managers of the Board of Trade of this city, would respectfully call your attention to the necessity of a light on

the end of the breakwater in our harbor.

The main entrance to our lower harbor (so termed) is one of the best on the whole Atlantic coast; but after entering the lower harbor, the breakwater upon one side of the main channel, and Hog Island ledge on the other, make it dangerous in the night to come into the inner harbor abreast our principal wharves; but with a single light on the end of the breakwater, vessels could come to anchor in the inner harbor at any time.

A small movable light might be placed on the breakwater, and under the care of some person on shore, so that the expense might be light

compared with the benefits it would afford to our commerce.

As Portland has been selected as the winter station for the line of steamers established by the Canadian government, and now during the summer running to the St. Lawrence, we think this, in addition to the wants of our own increasing navigation, is alone a sufficient reason for the establishment of this light.

We would therefore respectfully request you to call the attention of the Light-house Board to the necessity of the above named light, if, after

examination, you concur with us in the necessity of the same. With sentiments of respect, we are your obedient servants,

GEO. W. WOODMAN. J. B. BROWN. H. J. LIBBY. T. C. HEISEY. JEDH, JEWETT. C. M. DAVIS. J. C. BROOKS. JONAS H. PERLEY. A. K. SHURTLIFF. RUFUS E. WOOD.

Lieut. Wm. B. Franklin, Light-house Inspector.

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis STEAMER DANIEL WEBSTER, September 12, 1853.

My Dear Sir: Your esteemed favor of September 7 is before me, and with pleasure I take this opportunity to reply.

One of the most important aids to navigation on the coast of Maine is

a fog-bell on Manana.

The island of Monhegan is the island that all of our vessels on this coast take their departure from on leaving the coast, and is the most desirable headland to make on coming in from sea; and it is the only land that steamboats wish to make between Portland light and Whitehead light, and it is indispensably necessary to make Monhegan before you change your course either from Portland or Whitehead. The Manana is a small island, taken, as you may say, out of Monhegan island on the westerly side, and makes the harbor of Monhegan.

The only way to make it is to run and feel your way along the coast, stopping and going ahead until you find it. A sailing vessel is obliged to run until she judges herself up, and then lay to until the fog clears Often a vessel or steamboat may be within a cable's length of this island in the fog, and not know whether they are very near or not, or whether they are inside or outside of the island. A bell, well arranged on Manana, would announce to a vessel the position of the island, and from that they could take their departure for Portland if going west, and for Whitehead if going east.

I think there is no point on our coast that needs so much the protection and particular attention of government, (as a good fog-bell well

arranged,) as on the Manana.

I would also respectfully call your attention to Portland harbor. The breakwater runs out into the harbor, so that the channel is very narrow between it and Hog Island ledge and another island on the easterly side of the channel—so much so, that it is very dangerous running into this harbor in the night; and Portland being a good harbor, is a great resort to vessels on the coast in a storm. It is highly necessary that a light should be placed on the end of the breakwater—to be made a colored light, red, or to have some way to distinguish it from other lights of vessels at anchor, or from lights of houses on the point, in order that it may be known.

These two things are, in my opinion, of more importance than anything for the protection of life and property that can be done by government on the coast of Maine.

Hoping that you will lend your aid to forward as soon as practicable

these suggestions, I subscribe myself

Your obedient and humble servant,

JOSEPH FARWELL, Muster of Steamer Daniel Webster

Lieut. W. B. Franklin, Light-house Inspector, Portland, Maine.

Portland, September 14, 1853.

DEAR SIR: Yours of the 7th came duly to hand; and feeling deeply interested in the subject of which you inquire, viz: "aids to navigation along the coast which our steamers navigate," I have conversed freely with our captains and pilots, and they are united in the opinion that a suitable bell placed upon Thatcher's island (Cape Ann,) to be rung during fogs, would be of immense benefit to the whole eastern coasting interest, as that point is the key to Boston harbor.

Further, they report that the light upon Boon island is very feeble, and altogether inefficient for one of so much importance, it being a guide

among some of the most dangerous reefs on the whole coast.

And I will again take the liberty of calling your attention to the bell placed upon Cape Elizabeth, it being entirely too small for one occupying so important a position; and the manner in which it is rung does not at all answer the purpose intended. One of that size placed upon Portland Head, near the old light, would be an excellent guide for entering this harbor in thick weather; and if placed there, would be the means of saving much life and property.

A harbor light placed upon the breakwater would be of vast importance, as many serious accidents occur for want of some such guide in this harbor; and the great increase of trade to this port makes improvements of this kind of far more importance now than at any former

period.

All of which is respectfully submitted.

J. B. COYLE,

Agent Portland Steam Packet Company.

Light house Inspector.

# No. 2.

# Extract from a report of W. B. Franklin.

PORTLAND, ME., October 27, 1853.

Sir: I yesterday received notice from the keeper of the light-house at White Head, Maine, that the Jones's fog-bell at that light-house stops after five or six strokes. The keeper considers the labor of ringing a bell by hand as less than that of winding up the new bell.

Very respectfully, your obedient servant,

W. B. FRANKLIN,

Light house Inspector.

Lieut. T. A. Jenkins, U. S. N., Secretary Light house Board, Washington, D. C.

#### No. 3.

Custom-House, Kennebunk, October 19, 1853.

Sin: In reply to your circular of September 1, 1853, I have to state that there are two objects embraced within this district, the success of which the public have felt and still feel a deep interest, to wit: the establishment of a light house at the mouth of our harbor, on the end of the pier, and of a breakwater in Cape Porpoise harbor. Congress

have been memorialized upon these objects, and papers are on file at Washington, setting forth their great importance. Our delegation will bring the matter up for consideration at an early day.

A more formal statement will be made to you of their utility.

Very respectfully,

ENOCH COUSENS, Collector.

No. 4.

Collector's Office, District of York, October 24, 1853.

Gentlemen: In compliance with your circular of September 1st, I have the honor to reply, that I have made careful inquiry what further aid is required to navigation on the coast, which may be considered of present necessity, in addition to those already existing or authorized by law to be established in my district, and find that it is the general opinion of mariners, and others engaged in navigation, that a light-house at the entrance of York harbor would afford great facility to the numerous coasting and fishing vessels which navigate the coast. As the harbor is adjacent to good fishing-grounds, it is always the resort of a large fleet of vessels during the fishing season, when the weather is more or less unsettled and boisterous. It is also frequented by large coasting vessels bound east, when headed by contrary winds in the bay east of this.

Our harbor, as you may be already aware, presents one peculiar advantage, which no other harbor for many miles east or west does; and that is, a northeast wind, which brings the most violent storms we experience on the coast, is fair to enter and anchor in perfect safety. It is said, by mariners, that it is as safe a harbor for vessels to lie, in violent storms, as any on the coast. Therefore, in my judgment, it seems very probable, and also very certain, that a light here might very much aid vessels in making this harbor in northeasterly storms, which must other wise go ashore on Rye beach, and other dangerous places on our rockbound coast, which, I regret to say, has been too often the case for several years past, and where many valuable lives have been sacrificed and lost.

I would further add and suggest, that from the information I can obtain, by the most reliable evidence, and from my own experience and observation, (having been employed as inspector of the revenue and boarding officer at this port, under the administrations of Mr. Van Buren and Mr. Polk,) I have had occasion, from time to time, to converse with mariners upon the subject, who live both east and west, and have always found but one opinion, thereby satisfying myself that a light here would be of very great benefit to the aid of navigation; in fact I know of no place on the coast of Maine where a light is more needed.

But as the matter is now before you for your consideration, it is to be hoped it may be so presented to Congress, by you and the other members of the Light-house Board, with such estimates for an appropriation

for that purpose as will secure the desired object.

According to my judgment, and the most reliable information I can obtain, five thousand dollars would be a sufficient sum to erect a good

and substantial light-house at this harbor, with all the necessary apparatus, including lamps, reflectors, &c., &c.

I am, gentlemen, very respectfully, your obedient servant,

LUTHER JENKINS,

Collector, York, Maine

Lieut. T. A. JENKINS,
Brevet Capt. E. L. F. HARDCASTLE,
Secretaries of Light house Board, Washington, D. C.

## No. 5.

Collector's Office,
District of Passamaquoddy, November 1, 1853.

Sir: Upon the receipt of your circular, (under date of the first of September,) I addressed communications to several gentlemen of character, intelligence, and experience, with a view to obtain the information you desired. I herewith transmit their answers, so far as they have been received.

The opinions contained in these answers are, in my judgment, entitled to great consideration. They come from reliable sources, and from men who understand, practically, the necessity for the "aids to navigation" which they suggest. I fully concur in their recommendations.

I have the honor to be, gentlemen, with high respect, your obedient servant,

BION BRADBURY, Collector.
Lieut. Thornton A. Jenkins,
Capt. E. L. F. Hardcastle,
Secretaries of the Light-house Board.

STEAMER ADMIRAL, September 27, 1853.

Sir: As regards the necessity of more light-houses, fog bells, beacons, or buoys on the eastern coast, mentioned in your late communication to me, I can only say I think there should be a fog-bell on the island of Martinicus, and also on Mount Desert Rock, and a buoy on the southern point of Petit Menan ledge.

When bound from Portland, or other western ports, east, in thick weather, if a bell could be heard on Martinicus, (where the course is altered more than two points of the compass,) a vessel could be run up

the bay with much more confidence and safety.

So also Mount Desert Rock, situated almost directly in the track from Boston into the Bay of Fundy: if a bell were ringing in thick weather, instead of trying to avoid the rock, navigators would calculate to go within hearing distance, get a new [course- rd proceed up the bay with much more safety.

Petit Menan ledges are four miles from land—always dangerous for large vessels, and in rough weather for any class.

Very respectfully, your obedient servant,

ALBERT WOOD,

Of Steamer Admiral

BION BRADBURY, Esq., Collection District of Passamaquoddy.

Calais, September 23, 1853.

Dear Sir: In reply to yours of the 9th, requesting me to report if any light house, buoy, beacon, or monument are required on the St. Croix river, I beg leave to state that a monument or beacon on the "ledge," so called, four miles below Calais, and also two or three buoys just above the ledge, are much needed. At this place the river curves and the channel is quite narrow, which, in the spring and fall freshets with our great rise of tide, renders the navigation extremely difficult and dangerous, except to those well acquainted.

The "Big island," ten miles below Calais, is another point difficult to pass in the night; in fact, it is never attempted by heavy vessels, being directly in the centre of the river, with numerous ledges and small islands on the American side of it. A light house upon this island is very necessary, as the many vessels wrecked upon it abundantly prove. Not a single beacon or buoy of any description has ever been placed upon

the river by the American government.

Sixty vessels, ranging from 500 to 1,300 tons, have been loaded at the ledge this season, and, but for the great draught, the number would have been nearly double. Over 1,500 vessels, exclusive of steamboats, are reported by the deputy collector at Calais alone as having arrived

and sailed from that port the last year.

The rapidly increasing trade of Calais would seem to entitle it to the consideration of the government; and during the five years I have been upon a steamboat, I have seldom passed either of the places before named that the importance of having a light house upon the one and a beacon or buoy upon the other did not occur to me.

Very respectfully, your obedient servant,

THEO. CARY,
Master of Steamer Pequasset, Eastport.

BION BRADBURY, Esq.,

Collector of the District of Passamaquoddy, Eastport.

Steamer Easton City, September 30, 1853.

Sir: Feeling honored by the privilege which you have given us of pointing out any improvements which may be made in regard to lighthouses, &c., on our coast, we take the earliest opportunity of replying,

and would suggest, that for the safety and convenience of mariners a fog-bell should be erected on Mount Desert rock.

Very respectfully, your obedient servants,

E. B. WINCHESTER, JOSEPH ATKINS, SIMON II. PIKE.

BION BRADBURY, Esq., Collector of Customs, Eastport.

No. 6.

COAST SURVEY STATION NEAR PHILLIPS, MAINE, November 11, 1853.

DEAR SIR: In the report of his survey of Portland harbor, Maine, Lieut. Commanding Woodhull makes a recommendation for a light on the breakwater, and a can buoy on the shoal to the northward of it, in that harbor. I communicate an extract therefrom upon this subject for the information and consideration of the board.

Yours, respectfully,

A. D. BACHE, Superintendent.

Lieut. T. A. Jenkins, U. S. Navy, Secretary of Light house Board.

"I would recommend that a small sixth order harbor light be erected on the extremity of the breakwater; also that a can-buoy be placed on the shoal to the northward of the breakwater—the one now down is too small to serve as a proper mark. I deem the light above mentioned very important. It is absolutely necessary to make a safe entrance into the harbor, and to guard against striking the breakwater itself, which is nearly under water at high tide, and is therefore on dark nights difficult to be seen so as to be avoided."

No. 7.

Extract from the report of Major C. A. Ogden, United States Corps of Engineers, dated November 9, 1853.

Towards the erection of a light-house on the rocks called the "Sow and Pigs" \$30,000

The hydrographical survey of these rocks has not yet been received, but plans for the light-house will be matured and submitted during the next winter. This work will require a large outlay at the commencement, and when commenced should be carried above the effects of storms in the shortest possible time. The present appropriation may possibly be sufficient to commence operations at this difficult location; yet I feel

d upon (also having in view the amount of the appropriation of

1854) to ask for an additional appropriation of \$30,000.

Spindles on the N. E. ledge of the Groves and Harding's ledge An additional appropriation was made for the same purpose August 31, 1852.

\$2,000

6,000

8,000

I have not been able to get on the Groves rock to examine its structure; but, judging from the formation in the immediate vicinity, I am led to the conclusion that it would not sustain the proposed spindle, nor does there appear to be base enough to build a mere permanent beacon. Harding's ledge is still lower than the Groves, and may have sufficient stability to hold a spindle; yet, so long as there is a doubt, I think it would be much better to expend the appropriation in placing a bell buoy, with a bell of about three hundred pounds, at the Groves, and a triangle buoy at Harding's, and a fog-whistle at the Boston light.

 The fog-bell at Boston light, from its position, the confinement, or in proper deflection of the sound, or some other cause, is heard in storms but a few hundred yards in the direction of the channel of entrance; and it is believed that, independent of other aids, a fog-whistle would better

answer the purposes of navigation.

#### SPINDLE ON THE LANDONER.

On the 21st July, 1852, a contract was made by P. Greely, collector of customs, with Luther Briggs, jr., for the erection of this spindle. The contract specifies no time for its completion, nor does it indicate any means of coercion; on the contrary, it specifies that when the iron spindle and superstructure shall be delivered at some point near the rock and remain forty days without an opportunity of erecting it, the contractor shall receive \$2,500, and the balance, \$2,000, when the work is completed. The spindle has been delivered at Rockport, and the contractor paid for it. Mr. Briggs informed me, in the last of July or first of August, that he was willing and anxious to complete his contract, and that he had an agent at Rockport waiting an opportunity for putting up the spindle. I saw the spindle at Rockport in September, but no preparation made for its erection. I am convinced, that unless some means of coercion can be found, the spindle will never be put up under the present contract, and I see no way of annulling it.

Respectfully submitted,

C. A. UGDEN,
Major Corps of Engineers.

No. 7a.

Collector's Office, Edgartown, October 6, 1853.

Sin: In reply to your circular letter of the 1st ult., I have to say that know of no new aids to navigation required in this district.

The tower and keeper's dwelling at Gayhead are very old, the latter extremely inconvenient. The tower is too low, and the light is by no means so powerful as is required at so important a point.

In my opinion, a first class lens light should be erected there as soon

as is practicable.

Very respectfully, your obedient servant,

JOSEPH T. PEASE,

Superintendent.

Lieut. T. A. JENKINS,

Secretary of Light-house Board.

## No. 8.

Boston, November 9, 1853.

Sire: In compliance with the circular of the Light-house board of the 1st September, I would suggest that an appropriation of \$30,000 be asked for towards the erection of a first-class lens light-house at Gayhead, (Martha's vineyard,) and for the erection of a new tower for a second-

class lens light at Brant point, Nantucket, \$15,000.

The board is fully aware of the necessity of the immediate erection of the proposed light at Gayhead. The frame of the light-tower at Brant point is so completely rotted as to require reconstruction with the least possible delay; and believing it to be the wise policy of the board to make all its future constructions permanent, I have asked the above amount for the tower. The dwelling-house is much decayed, but has a nearly new roof and weather-boarding on it, and may last for some years yet.

The beach south of Long Point light, Provincetown harbor, has worn away considerably on the east side, and made some on the west, since the survey of Major Graham; but as the progress of the change appears to be slow, I would rather watch it another year than recommend an appro-

priation for its preservation at present.

Billingsgate island, Wellsfleet bay, requires protection. There has been expenditures made for this object sometime heretofore; but, from the present appearance of the work, I cannot trace the design of the particular object sought to be obtained beyond that of the immediate protection of the house. The work, however, appears to have been left in an unfinished state, and wherever large rocks have been left, there has been an accumulation of sand and a partial increase of the shore. I therefore propose, during the next year, to properly arrange the loose stone that are now there, and procure enough more to make the island secure; for which I ask for an appropriation of \$2,000.

I consider the protection of this island and light of the first importance, as it is the only harbor of refuge from a southeast gale in Cape Cod bay

for vessels that have been unable to make Provincetown harbor.

Recapitulation	of	appropriations ask	red	for	new	works:

C. A. OGDEN,

Major Topographical Engineers.

Capt. E. L. F. HARDCASTLE, Secretary Light-house Board, Washington.

No. 9.

Collector's Office, District of Nantucket, October 22, 1853.

Sin: I would say that no new additions are required at present, but I would respectfully recommend some improvements in those existing, viz: a new light-house and dwelling at Brant point, (harbor light,) and an additional dwelling-house at Sankaty head for the assistant keeper and his family. The whole establishment at Brant point is very much out of repair, and from the age, material, and construction of the building, I should not consider it good economy to repair it; the interests of the government, and all concerned, seen to demand a more permanent and commodious structure. The assistant keeper at Sankaty head is at present subjected to a daily travel of about seven miles, in consequence of the incapacity of the present dwelling at that station to accomodate more than the principal keeper and his family; this, in the winter season, is not only an arduous task to perform, but is attended with great inconvenience to the keeper, as the daily absence of the assistant from the station is necessarily considerable.

I am, very respectfully, your obedient servant, EBEN W. ALLEN, Collector and Superintendent.

THORNTON A. JENKINS, Esq., Secretary of Light-house Board, Washington.

## No. 10.

Extracts from a letter from Captain R. B. Forbes, of Boston.

I therefore only make two or three suggestions for your consideration, fearing they may come too late, and supposing also that they are not new:

1st. Highland light is shut in by the bluff to the south of it, and ought to be placed a mile or two from its present position, as all know who make it coming from the south southeast and south.

2d. Light-boats on our northeastern coast, particularly in Vinevard sound, Pollock rip, and Tuckanuck, should have larger bells, and should. during thick fogs, fire guns at stated intervals.

3d. Shoal spots off Nantucket, and particularly the new discoveries,

ought to have buoys or buoy boats on them.

4th. There should be a number of large boiler-plate buoys, securely moored, say half a mile to one mile apart from the channel, off Boston light, seaward, so that vessels coming in during foggy weather may find their way into harbor; the outer buoy to be at least ten miles from Boston light.

5th. All buoys in our harbor channels should be of hoiler plate, and large enough to be seen at night in any proper sailing weather; the "broomsticks" now used are scarcely perceptible in the clearest night

until you run against them.

6th. The buoy on Pollock rip, starboard-hand going southwest, does not "watch" in strong tides; and all the buoys in the same vicinity, except the buoy boats off Nantucket, are altogether too small and indistinct, rendering the navigation dangerous where it ought to be quite easy and safe.

## No. 11.

Office of Inspector of Lights, &c., New York, November 19, 1853.

GENTLEMEN: The following aids to navigation in this district are very much required, in addition to those already reported on, and I think will be largely petitioned for, viz:

Fog-bell at Little Gull island, New York, weighing from 1,500 to 2,000

pounds.

Fog-bell at Stoney point, New York, weighing from 1,000 to 1,500 pounds.

Fog-bell at Lynde point, Connecticut, weighing about 1,000 pounds; all to be run by machinery.

Very respectfully, your obedient servant, A. LUDLOW CASE,

Inspector of Lights, &c., &c., Third District.

Lieutenant T. A. Jenkins, U. S. N.,

Captain E. L. F. HARDCASTLE, U. S. T. Eng.,

Secretaries Light-house Board, Washington, D. C.

## No. 12.

Office of Inspector of Lights, New York, October 21, 1853.

Sir: I have just returned from an examination of Lloyd's harbor, Huntington bay, L. 1. It has always been, and is still, a great harbor of refuge for vessels navigating Long Island sound in stormy or easterly

weather. A light, say of the fourth order Fresnel, would be of the greatest service in making it, and in my opinion is very much needed. If one is erected, I think it should be placed on the end of the sand point, north side of the harbor. By referring to the coast survey chart of Huntington bay, you will see that the water is bold to it. The point is formed by the wash of the sea; is of coarse sand and gravel, and at times entirely covered by water.

The letter from Captain Paulding, U. S. N., to the honorable Secretary of the Treasury, and enclosed to me by the Light-house board,

is herewith returned.

Very respectfully, your obedient servant,

A. LUDLOW CASE, Inspector of Lights, &c., Third District.

Lieut. T. A. Jenkins, U. S. N., Secretary to Light-house Board, Washington, D. C.

> NAVY YARD AT WASHINGTON, August 9, 1853.

Sin: I have the honor briefly to address you on a subject of importance to the interests of commerce as well as to the cause of humanity.

Lloyd's harbor, on the Long Island sound, is the only refuge in stormy weather, for many miles, for the numerous coasting and other vessels that navigate the sound at all seasons. The light on Easton's neck guides them to the bay of Huntington; but the approach to Lloyd's harbor, where alone they can find a safe anchorage, is dangerous and extremely difficult, from the existence of a low sand-spit on one and a rocky shoal on the other side of the channel. It is suggested that a beacon, or some other conspicuous landmark, should be erected in such locality as may be adjudged best.

Having been respectedly requested by the watermen who navigate the sound to give my aid in bringing this subject to the notice of the government, I have considered that I could in no way more properly do so than by addressing myself to your excellency. That a more perfect knowledge may be communicated to the department, and upon which an appropriation may be asked of Congress, I would most respectfully propose that a commission of two or three officers be appointed to examine the location, and report to the department over which you preside.

I would take leave further to remark, that in the intervals of service for the last fifteen years my residence has been in the vicinity of Lloyd's harbor; and my professional calling has often led me to consider the importance of a beacon or some other guide by which the harbor could be approached in stormy weather.

I have the honor to be, with the highest respect, your most obedient

servant,

H. PAULDING, Captain U. S. Navy.

Hon. James Guthrie, Secretary of the Treasury, Washington. No. 13.

Office of Inspector of Lights, New York, November 15, 1853.

Sir: Enclosed herewith you will find statements of the condition of the illuminating apparatus and lanterns of the light-houses and vessels of this district. I have notes of the condition and state of the towers and dwellings also; but as Major W. D. Fraser, United States engineers, accompanied me in my visits, and will give a full detailed report of the repairs required, the necessity for tearing down, rebuilding, &c., &c., I

have said but little about them.

The illuminating apparatus in the small stations on the Hudson river and Newark bay are old ones from coast stations, well worn out before they were removed to make place for larger reflectors and better lamps. I have generally recommended a small lens for them; one of the fifth order would be larger than necessary, and one of the "steamer lens" too small. Something between them both, say with a perpendicular face of 12 to 18 inches, would be ample. The difference in the consumption of oil would soon pay the expense of alteration. Lenses of that size would also answer very well for the smaller stations which require new apparatus in Narragansett bay; the lights along Long Island sound requiring new apparatus would want a larger size, say from third to fifth order, according to their importance and the distance necessary to be seen.

In almost every instance where the lighting apparatus requires renovation the lantern frames should be reduced, and large-sized plates of glass substituted for the small ones now in use, to prevent as little

obstruction to the light as possible.

With the exception of the Highlands, and one or two other towers, the whole are without closets or shelves for stores, or tables for cleaning. I would respectfully repeat my former suggestion, that as we now know the size of the faces of the octagons, they be made during the winter, and furnished in the spring by the vessel which delivers the supplies, or carries the men to make the repairs, &c.

Very respectfully, your obedient servant,

A. LUDLOW CASE,

Inspector, &c., Third District.

Lieut. T. A. Jenkins, U. S. N., Secretary Light house Board, Washington, D. C.

## No. 14.

Extracts from the report of Major Wm. D. Fraser, Corps of Engineers.

On making inquiries of pilots and others interested in the navigation of Lake Champlain, in relation to such additional lights as might be required, I was informed that two bug lights were wanted on the Burlington river—one at the north end, and the other at the south; that the steamboat company had, at their own expense, kept up a light at Windmill point, and at the north end of the Isle au Motte, and that at the former place a

light-house was necessary, at the latter a small light only. These lights, with the one to be erected at Point au Roche, would be all that the mid-

dle and north part of Lake Champlain required.

At the southern end I had an opportunity of observing for myself, and am satisfied that at Crown point a light house should be built, and that the charge of the nine small lights kept up 10 or 12 miles off Whitehall by the steamboat association, should be assumed by the general government. It is true they are most useful to those who have heretofore borne all the expense, but as they are of great advantage to the public generally, they ought no longer to be a burden to private individuals. At present they are merely placed on poles or upon the bushes.

	_		

I omitted to mention in its proper order the condition of the East river

from Throg's neck to New York in respect to lights.

It is well known to be the most intricate and dangerous part of the whole route from the east, and has not a single guide of this kind for those who may wish to pass through at night. Without having examined the river with reference to this matter, it appears to me that a small light on Mill rock, at Hellgate, would be found highly useful; others perhaps are necessary, but this I regard as most important.

#### No. 15.

Extract from a communication from Benjamin Brayton, esq., manding the steamer Empire State, dated November 4, 1853.

Bristol ferry, which is a narrow strait, is the point of connexion between Narragansett bay proper and its eastern branch, known as Mount Hope oar, and Taunton river. By reference to the chart (see chart of Narragansett bay, which was published by the Navy Department, showing result of the survey of 1832) you will perceive that the passage between what is there designated as Bristol neck and the island of Rhode Island is very contracted, and that here the course of a vessel, entering or departing, changes; and you will readily appreciate that in the absence of a light on the point of Bristol neck, (which is the proper locality for the light asked for,) the passage through this strait in bad nights must always be attended with great difficulty, and often with danger. This is so truly the case, that for the last seven years, since the first establishing this line of steamers, our company has maintained a light on that point at its own private cost, benefiting alike their own boats (two of which pass every night) and the numerous sailing craft constantly plying

these waters, and which, but for our light, would never, except under very favorable circumstances, attempt to pass through Bristol ferry in the night. Our light is not always as reliable as would be a light subject to government control, which must lead all to desire to see a light-house established there; and inasmuch as the general commerce of Mount Hope bay and Taunton river is heavy, this forms a just reason why the light there should be maintained at government expense rather than at private cost. The light should be a fixed light, similar to the light in its vicinity on Sandy point, (Prudence island.)

I am, gentlemen, very respectfully, yours,

BENJAMIN BRAYTON,

Master Steamer Empire State.

To Messrs. T. A. Jenkins, U. S. Navy, and

E. L. F. HARDCASTLE, U. S. Top. Engineers, Washington, D. C.

## No. 16.

Extract from letter from Walter R. Jones, esq., President Atlantic Mutual Insurance Company and of Board of Underwriters, duted New York, November 29, 1853.

I am also told that a light-house is needed at Niantic, on Long Island sound, about ten miles west of the entrance into New London; that the harbor has good deep water, and makes a safe anchorage for vessels in need of shelter.

#### No. 17.

Custom House, New London, Office of Superintendent Lights, October 7, 1853.

Sin: Since the receipt of the circular of the Light-house board of September 1st, I have made inquiry of those most likely to be well informed on the subject, as to the necessity of additional guides to navigation in this district. The general, I may say the universal, opinion is, that a beacon, instead of a buoy, on Black ledge, a reef of rocks at the entrance of this harbor, would be a great additional protection to vessels navigating Long Island and Fisher's Island sounds; more especially those passing through Fisher's Island sound and entering and leaving this port.

A light-house on Race point, west end of Fisher's island, would be an additional protection to commerce. With the exception of Black ledge, this reef is considered the most dangerous in the district. Hardly a month passes that a vessel is not run on Black ledge, always receiving more or less damage. These are the only points that I have heard mentioned as requiring additional aids at this time.

I transmit with this two letters on the subject—one from Captain Mather, the other from Captain Smith. Both of these gentlemen have had much experience in navigating the sound. Captain Mather com-

manded the revenue cutter stationed in this district for many years. He is a man of intelligence and judgment; his opinion is entitled to consideration, as is also that of Captain Smith. The opinions of these gentlemen are corroborated by all who I have conversed with who have any knowledge on the subject.

Should the board deem it necessary, I will have estimates made of the

cost of a beacon on Black ledge.

Respectfully, your obedient servant,

H. HOBURT, Superintendent of Lights.

To Thornton A. Jenkins, Esq., Secretary of the Light-house Board, Washington.

NEW LONDON, September 26, 1853.

Dear Sir: I think there ought to be a beacon on Black ledge, at the entrance of New London harbor, for there have been very many vessels lost on the ledge; there are not more than two feet water on the ledge, and there would not be any difficulty in making a beacon stand there; and there ought to be a light-house on Race point, the west end of Fisher's island.

Yours, truly,

LEONARD SMITH,

Master Steamer Chicopee, of New London.

Mr. Hoburt,

Collector at New London.

NEW LONDON, October 1, 1853.

Sir: You ask my opinion as to the importance of a beacon on Black

ledge, off the east entrance to New London harbor.

Black ledge is a very dangerous reef, extending about two hundred yards in a N.E. by E. and S. W. by W. direction. There is a channel between the N. E. end of this ledge and Pine island, of about two hundred and twenty yards wide, with three fathoms water in it; and about two hundred yards W. ½ N. from the S. W. end of this ledge lies S. W. ledge, with a channel between them of five fathoms water.

There is a buoy on each end of Black ledge, and one on S. W. ledge. These buoys being so near each other often deceive the navigator; therefore I think it would be very important to substitute a beacon in place of the buoy on the N. E. end of Black ledge. There has been a number of vessels wrecked on this ledge, and many of them have been a total loss of vessel and cargo; and in some instances lives were lost. I have no doubt that many of the above losses would not have occurred had there been a beacon as above.

All vessels coming into New London from the east through Fisher's Island sound, &c., pass near this ledge, and often pass between the ledge

and Pine island, where the beacon would be of very great importance, particularly in thick, blowing weather.

Yours, very respectfully,

ANDREW MATHER.

Henry Hoburt, Esq., Sup't buoys, beacons, &c., New London.

STEAMBOAT BAY STATE,
New York, November 22, 1853.

GENTLEMEN: I would suggest that a fixed light upon Horton's point would be of great value to those who navigate Long Island sound, supplying, as it would, the existing deficiency of lights upon the Long Island shore between Old-field Point light and Plumb Island light.

It is also of all essential importance that a light-house be constructed at Bristol ferry, in Narragansett bay. There is probably no locality in the country, certainly none within my knowledge, where a light-house is so much needed. All that was set forth in a petition to which I affixed my name, and which I learn was forwarded to you, is strictly and literally true. Indeed, the petition but inadequately sets forth the importance of this object.

Those of us who have to pass through this strait on dark and stormy nights, or else are brought to a stand in the attempt to grope our way through, realize that, as it now is, we are subjected frequently to a responsibility more weighty than ought to be placed on any one.

The difficulty is partly obviated by a light which is now maintained there by our company; but this of course is of less power, and less to be relied upon, than a government light.

I am, gentlemen, yours, very truly,
WILLIAM BROWN,
Master Steamer Bay State.

To Messis. Thornton A. Jenkins, U. S. Navy, and E. L. F. Hardcastle, U. S. Top. Eng's, Secretaries of Light-house Board, Washington, D. C.

No. 18.

Custom-house, New London, Office of Supt. of Lights, November 14, 1853.

Sin: I herewith transmit petitions for a beacon on Black ledge. The petition might be more numerously signed were it deemed necessary, for all who are interested in navigation between our eastern ports and New York are in favor of a beacon. I will, in the course of a few days, forward to the board estimates of the probable cost of a beacon of suitable dimensions and construction.

Respectfully, your obedient servant,

H. HOBURT, Superintendent of Lights.

THORNTON A. JENKINS, Esq., Secretary Light-house Board, Washington, D. C. No. 19.

Office of Superintendent of Lights, Sag Harbor, October 17, 1853.

Sin: In answer to a circular letter from the Light-house board asking a description of such aids to navigation, in addition to those already existing, as are required within this district, I have the honor to report:

Within that portion of the district assigned to the surveyor at Greenport, spar-buoys are required at the following points: At Hay Beach flats; at Great Hog-neck, Southold; at Little Hog-neck, Southold; at Miaming bar, at the entrance of the channel at Riverhead.

Within the other portion, spar-buoys should be placed at a point in Shelter Island ferry; at Nicholl's rocks, between Ramhead and Meshomac

point; at a shoal or sand-bar east of Gardiner's point.

At Gardiner's Point shoal a spar-buoy formerly was placed by boatmen, which is now lost. The shoal extends off three quarters of a mile; the water shoals suddenly from six fathoms to seven feet, and vessels fre-

quently strike upon the bar.

At Shagwonunck, or Shagwan reef, a bell-buoy should be placed. A beacon or spindle will not resist the surf. This reef is about four miles west of Montauk, on the north side, and extends into the ocean about three miles. It is in the path of vessels bound up or down the sound around Montauk, and dangerous in foggy weather. I have spoken with several gentlemen, shipmasters and ship-owners, and all concur in the opinion that a bell-buoy is the only signal proper to indicate its position, and of the necessity for it. Many vessels, I understand, have struck upon the reef, and several have been wholly wrecked. The general coastwise trade will be aided rather than that of this district, and for that reason I solicit your attention to it.

The foregoing are all the points, so far as I can learn, at which

additional aids to navigation are needed.

It is probably too late to commence the construction of the beacon at Plum gut, or the light house at Gardiner's island. The importance of these structures require their completion at the earliest time practicable.

Although not within this district, I again call the attention of the Light-house board to the subject of the erection of a light-house between Montauk point and Fire island.

Very respectfully, your obedient servant,

S. L. GARDINER.

Thornton A. Jenkins, Esq., Secretary Light-house Board, Washington.

## No. 20.

Extract from a letter from H. B. Smith, esq., collector of customs at Plattsburgh, New York, dated November 1, 1853.

I have the honor to submit, and would most respectfully recommend, appropriations for the following objects, viz:

1st. \$200 for the purpose of building and placing buoys on Point au Fer reef. This reef is about four miles south of Rouse's point, and is

about three-fourths of a mile in length. It is located near the centre of the lake, which at this point is about two miles and a half wide. Vessels pass on both sides of the reef, the top of which in low water is

level with the surface of the water.

2d. \$100 for the purpose of making and placing buoys on Perry's reef, opposite Point au Roche, at which point the lake is very narrow. This reef lies southeast from the site selected for the light-house to be erected on Point au Roche, and is about sixty rods long, and is covered with water, and in bad weather vessels are in great danger of running on to it.

3d. An appropriation of \$75,000 will be required to finish the break-water at Plattsburgh, according to the original plan of engineers. It is absolutely necessary that this work should be completed for the protection of vessels lying at the docks, and to afford a safe harbor for vessels in bad weather. There is no improvement on the lake more necessary than this.

4th. \$100 for the purpose of making and placing buoys on a reef between Valcona island and the main shore of the lake. This reef is situated west of and about half-way between the island and the main

land, and is very dangerous.

5th. \$100 for the purpose of making and placing buoys on Ferris reef. This reef is in the main channel between Plattsburgh and Burlington, nearly opposite Port Kent harbor, and is very dangerous in bad weather for vessels passing through the lakes. This is a small reef or rock, about thirty or forty feet in diameter, coming near the surface of the water, and might easily be blasted away and broken down at an expense not exceeding \$2,000—which is the true way of disposing of this rock. There has been a number of vessels materially injured by running on this rock. Last fall one of the lake steamboats ran on this reef, and went down in a few minutes. I would recommend an appropriation of \$2,000 for the purpose of breaking down the rock.

6th. \$200 for the purpose of making and placing buoys on Schuyler Island reef, lying between Burlington and Port Douglass. This reef is about half a mile in length, is very dangerous, and requires buoys to

mark its particular location.

7th. \$6,000 for the purpose of purchasing a site and building a light-house on Crown point, near the old fort. A light house is very necessary at this point, to enable vessels to pass with safety through the dark narrow channel at Chimney point. It is said, by those who are best acquainted with the navigation of Lake Champlain, that a light house is more necessary at this point than at any other on the lake.

8th. An appropriation of \$10,000 or \$15,000 should be made for working the new steam-dredge at Whitehall. There was an appropriation made for building the boat, but no appropriation was made for working it. It is absolutely necessary that the channel near Whitehall should be dug and cleaned out, or the navigation will have to be suspended in

a short time.

I would further recommend an appropriation of \$5,000 for the erection of a light-house upon the north end of Isle La Motte, which is very necessary for the safe navigation of the lake. I have thought proper to make this recommendation, although the site of the proposed light-house

is not within this district, because its erection is necessary to render navigation safe.

All of which is respectfully submitted.

I am, gentlemen, very respectfully, yours, HENRY B. SMITH, Collector, &c.

To Lieut. Thornton A. Jenkins, U. S. N., and Capt. E. L. F. Hardcastle, U. S. A.,

Secretaries of Light house Board, Washington, D. C.

### No. 21.

Collector's Office, Somers Point, September 30, 1853.

Sire: By the request of those interested in the coasting business, it is deemed to be of the greatest importance, for the safety of lives and property, that a light house be built on Absecum beach, and a bell-buoy be placed outside of the Absecum bar, in the district of Great Egg harbor, New Jersey.

We would ask that the sum of \$10,000 be appropriated at the next session of Congress, and the sum of \$3,000 to build and place the said

bell buoy on said bar, making the sum of \$13,000.

From your obedient servant,

THOMAS D. WINNER, Collector of Customs.

l ieut. Thornton A. Jenkins,
Secretary of the Light-house Board.

#### No. 22.

Office of Fourth and Fifth Light House Districts, (exclusive of Albemarle and Pamlico sounds,) Philadelphia, November 1, 1853.

Sirs: I beg leave to suggest, at the request of the board, communicated in the circular of the 1st of September, the following described aids to the navigation of Delaware bay.

1. To substitute a lenticular fixed light of the first order, for the catoptric fixed apparatus now forming the main light at Cape Henlopen.

2. To place a fog-bell at the harbor of the Delaware breakwater.

3. To substitute a light house, with a lenticular revolving or flashing light of the fourth order, (U. S.) on Cross ledge, for the light vessel in the channel off that shoal.

4. To erect a light house, with a lenticular fixed light of the fourth

order (U. S.) on Ship John shoals.

5. To bank in Reedy island, in part or entire. And

6. To place a fog-bell at the Reedy Island light-house.
(1.) Cape Henlopen, as the deep water cape of one of the principal estuaries of the line of the Atlantic coast, calls for a first-class seacoast light. The numerous accidents that have occurred in consequence of the inferiority of the lighting apparatus, from confounding a light which, from position, should be one of the principal seacoast lights for the

light-ship off Five Fathom bank, would be wholly avoided by the change suggested. The elevation of the tower (170 feet) above the level of the sea is favorable for such an application as that proposed. The light of the present catoptric apparatus, consisting of eighteen 21-inch reflectors, it is evident, from the statement of the special Light-house board, (see printed report, pp. 136, 191,) that in useful effect it was to the third order (U.S.) of the Brandywine light, as but one to six cannot penetrate as far as the visible horizon of such an elevation. The cost of carrying out the change would be as follows:

For a lenticular apparatus, first o	rder, fi:	red	•	-	\$8,500
For a watch room and lantern	• ′	-	-	-	4,900
For preparing the tower and rece	iving th	ie abov	re	-	1,600
	_				
Amount	-	•	-	-	15,000

As it is necessary to illuminate only three-fourths of the horizon at Cape Henlopen, I would respectfully recommend a fountain lamp, and that the land quadrant be occupied by holophotal panels, to turn back the light for distribution in the remaining three-fourths of the arc. I may also remark, that as the present coping course of the tower is but four inches thick, a new one, of proper dimensions, may be required in fitting on the new lantern. In that case, the amount set down against the last head will be found none too large.

(2.) The benefits of the harbor of the Delaware breakwater can never be fully available until the means are supplied, through sound, for entering it in thick and foggy weather, as these are now afforded through light by sight. Both ends of the principal work should properly be occupied by a fog-bell; but as the southern or cape end is not yet built up to the full height, this useful help to navigation should at present be

confined to one at the present light.

(3.) The light-vessel off Cross Ledge shoal should long since have given place to a permanent light. On expressing an opinion some years since of the advantages likely to follow such a change, in the presence of one of the then representatives in Congress from this city, he requested me to address a letter to him upon the subject. I should here say I had an object, apart from improving the aids to the navigation of the bay, in suggesting this change, in making available the caisson and stone provided for the Brandywine, the plan of which had been changed to one of screw-piles, which would otherwise be sold at great loss. From this letter, dated the 21st of April, 1848, I beg leave to extract the following, as embodying the views then entertained in reference to the change in question, as no less applicable now than at that time, saving that the caisson has long since passed into other hands:

"The considerations which commend the proposed measure to the favorable notice of Congress, beyond those arising from a saving to the public of valuable property otherwise destined to be sold at a ruinous sacrifice, are found in the advantages of a permanent over a floating light. These consist, first, in the light being always in position; whereas the floating light, besides being removed at times for repairs, is liable to be driven off from its station by stress of weather at the very time of all others (the seasons of storms and running ice) when these very useful beacons are of most importance to the mariner; and, second

in the reduced cost of maintaining such a light over a floating one-known, from experience, as about one third only, without taking into

account the charge for renewal of such lights "

The Cross ledge is on the eastern side of the main ship channel, and about fourteen and a half statute miles, measured to the lower end in six feet at low water, above the Brandywine light, correspondingly situated on the lower end of the shoal of that name. A revolving or floating light would effectually distinguish it from the fixed light of the Brandywine, and the light recommended under the fourth head on Ship John shoal, which should also be a fixed light. As a channel light, the period of obscuration should of course be very short. The position of the shoal, depth of water, and nature of the bottom, all point to the pneumatic pile to secure a foundation for the structure, which, by selecting a point seaward, as propose J, would be protected by the interposition of the crest of the shoal from the heavy running ice borne on the ebb current from above, and thus supersede in part, if not altogether, the necessity for any costly works to guard against its destructive effects.

The probable cost of the structure can only be based on a well-matured plan, including details. The greater exposure, the use of a different pile, and the absence of all experience in like works, in case of the Brandywine, to say nothing of a full ice protection for that light, will hardly serve as a criterion on which to found even an approximate estimate. Thirty thousand dollars may, however, be named as likely to

cover the cost.

(4.) Ship John shoal, the next point in ascending the bay which should be occupied by a light, is also on the eastern side of the main ship channel, and about twelve statute miles. Assuming a seven-foot lump as the proper position above the site selected for the light on Cross Ledge shoal. it will be found, on examination of the coast survey chart of the Delaware, to protrude somewhat beyond the general line of the shoal ground bounding the channel on that side; which circumstance, in connexion with the small depth of water and lumpy and hard character of the bottom, renders it highly desirable that it should be distinctly marked at all times. There is no reason to doubt the applicability of the atmospheric pile for this structure also. The cost, from the position being further removed from the sea, would not probably be as great as the cost of the light on the Cross ledge, unless indeed it should require, from the prominence of the site on the line of the channel, more costly works for protection against the ice, which would sweep close along by it at every ebb and flow of the tide. A selection of a position more retired on the lower slope of the shoal may be occupied with less exposure; but by this change the light would be less of a leading light, and in so much not as well subserve the purposes of navigation.

The distances from the main ship-channel of the lights on either shore of the Delaware below Ship John shoals, are so great, varying as they do from six to ten miles, as to afford little or no assistance to vessels passing through that channel. They were erected, indeed, with no reference to the wants of general commerce, but solely with a view to the local trade in each case. The only dependence, until late years, in the run up the bay, on entering the capes at night, was in the light-vessels off the Brandy wine and Cross Ledge shoals; and these, it is well known, if not taken off their stations, were driven off during the season of storms and

16

running ice. The first has been superseded by the light-house erected on the shoal; and were the recommendations now made in reference to Cross Ledge and Ship John shoals carried into effect, the very difficult navigation of the bay would be made comparatively safe and easy; as a vessel taking the principal channel would always, in the ordinary condition of the atmosphere, be in sight of a leading light between Cape Henlopen and Reedy island, as will appear from the following statement of distances:

Cape Henlopen light to Brandywine light
Brandywine light to Cross Ledge shoal
Cross Ledge shoal to Ship John shoal
Ship John shoal to Reedy Island light

141 statute miles.
142 do.
143 do.
144 do.

Should it be desired still further to aid the navigation, the last distance may be divided by occupying Siston's point, the lowest point at which the main channel runs close to the shore, six miles below Reedy

island.

(5.) The object of banking in Reedy island is to get rid of the growth of reeds, which, when dry and fired, endanger, on the prevalence of certain winds, the keeper's house and out-houses of the light house station on the lower end of the island. To bank the ten acres understood to be owned by the United States will cost as follows:

3,300 feet of embankment, at 50 cents
Contingencies, 10 per centum - \$1,650

1,815

The general level of the island is about eighteen inches above ordinary high water. The soil would almost at once produce crops of grass or corn, and rent probably for ten dollars an acre; thus affording a fund for the improvement of the place, or in so much to reduce the salary of the keeper, or as a perquisite to him, as may be considered best. There are, however, more collateral advantages growing out of the proposed measure, which should in any event be carried out.

(6.) The absence of any means to point out in thick and foggy weather the position of the lower end of Reedy island, is a source of much annoyance and some hazard to vessels ascending the bay, particularly to the steamers which ply regularly between the city and ports below the island, and which would be obviated by the use of a fog-bell at that point. This fog-bell, as well as the one for the harbor of the Delaware breakwater, and those for the establishment of the proposed light stations at Cross ledge and Ship John shoals, should all, as a matter of course, be struck by clock machinery, and in such manner as to make them easily distinguished one from another.

In the foregoing suggestions I have omitted to notice the new ice harbor on the east side of Reedy island, as I presume the officer in charge of that important auxiliary to the navigation of the Delaware during the

winter will call attention to the subject of lighting it.

I am, very respectfully, your obedient servant,
HARTMAN BACHE,

Major Topographical Engineers, Brevet Major in charge.
Lieut. Thornton A. Jenkins, U. S. N.,
Brevet Capt. Edmond L. F. Hardcastle, U. S. A.,
Secretaries Light-house Board, Washington, D. C.

No. 23.

Office 4th and 5th Light house Districts, (exclusive of Albemarle and Pamlico Sounds,) Philadelphia, November 11, 1853.

Sins: As a portion of a semi-official letter just received from Major John Sanders (corps of engineers) refers to one of the objects noticed in the enclosed communication, in answer to the call for suggestions for improving the aids to navigation, I beg leave to make the following extract from it for the information of the board: "I wish to call your attention to the necessity of a beacon-light on the outer pier of the lower line of our new harbor to the east of Reedy island. This pier is now constructing and will be finished this season. The corresponding one of the upper line will not be commenced until we have a new appropriation."

I have the honor to be, sirs, very respectfully, your obedient servant, HARTMAN BACHE,

Maj. Topographical Engs., Brevet Maj. and Eng. in charge.

Lieut. Thornton A. Jenkins, U. S. N.,

Brevet Capt. EDMOND L. F. HARDCASTLE, U. S. A.,

Secretaries of Light house Board, Washington, D. C.

# No. 24.

Engineer Department, Washington, October 26, 1853.

GENTLEMEN: I have the honor to communicate, for the information of the Light-house board, the enclosed extract from the report to this department of Major John Sanders, of the corps of engineers, dated the 21st inst., on the construction of a harbor on the east side of Reedy island, in reference to establishing a beacon-light on one of the outer piers of that harbor.

Very respectfully, your most obedient servant,

JOS. G. TOTTEN,

Bt. Brig. Gen. U. S. Engs.

To the Secretaries of the Light-House Board.

Extract from the report to the Engineer department of Bt. Major John Sanders, of the corps of engineers, dated the 21st of October, on the construction of a harbor on the east side of Reedy island, Port Penn, Delaware.

"The safety of vessels navigating the river at night will require a beacon light to be kept on one of the outer piers. I would suggest that the attention of the Light-house board be called to his subject."

No. 25.

Extracts from a communication of the Philadelphia Board of Trade to the Collector of Customs at Philadelphia.

PHILADELPHIA, October 15, 1853.

Sir: The committee of the Board of Trade on the lights, buoys, harbors, and the navigation of the Delaware, to whom your letter was referred, beg leave to state that the necessity existing for the erection of additional lights and buoys, in order to improve the navigation of the Delaware, has been for some time past under their consideration, and from a careful examination of the subject, and consultation with some of our most experienced pilots and navigators, the committee earnestly recommend as follows:

1st. A light house on the lower part of the Ledge shoal, to be of the same height and construction as that now on the Brandywine shoal, but showing a revolving light, to distinguish it from the Brandywine light. A light is much needed in this dangerous part of the bay, particularly during the winter season, when the floating light is removed on account of the drift ice, there being now no doubt (from the success of the construction of the Brandywine light house) that a similar construction on this shoal would be permanent, particularly when it is known that part of this shoal is frequently bare at low water.

2d. A light on the lower pier of the new harbor, eastern side of Reedy island, to show a red light to distinguish it from those of passing vessels, and to be placed on the extreme outer pier, which is situated near the channel, a distance of 800 feet from the shore, and is very dangerous at night. This light would also be of great service in navi-

gating this part of the river.

3d. A light on Reedy point, in order to point out the fair way when approaching the Pea-patch shoal. This light to be of moderate height, and to show two lights, one above the other; the lower light to be bright red, which will prevent the upper light from being mistaken for those on board of vessels.

4th. A large boat or nun-buoy, with proper distinguishing marks, on the southwest point of the over falls at the entrance of the bay. This buoy would mark the eastern edge of the channel, and would be of much service.

11th. Cape Henlopen light-house to be renovated and fitted with a lens apparatus of first order, with a revolving or flashing light, instead of a fixed light, as at present, so that it cannot be mistaken for the fixed light on Five-fathom bank, which has been frequently the case, thereby causing the loss of many ships, viz: Tuscarora, Swatard, Walter, &c. The light on Cape May, now a revolving light, to be changed to a fixed light.

12th. A large bell buoy to be placed on Fenwick Island shoal. This shoal is situated 20 miles south by east of Cape Henlopen, 6 miles distant from the beach, with 12 feet water on it, and is much in the

way of passing vessels.

13th. A large buoy on McCrea's shoal. This shoal is situated off Cape May, and is in the way of passing vessels.

Digitized for Fix A large buoy on the northeast part of the Five fathom bank. This

is a very dangerous shoal, and is constantly approached at this point by vessels arriving from Europe. The light-boat lies from one to two miles west of this shoal, and therefore is but little service to vessels inward hound.

15th. That as most of the buoys in the bay and river are small, they

should be replaced with those of larger size.

16th. That authority should be given to the superintendent of the buoys on this station to remove immediately, when practicable, all wrecks when sunk in or near the channel, or place buoys on them to warn vessels passing.

17th. That from 15th December until 1st March all the can-buoys from the Ledge shoal to the city shall be replaced with spar-buoys, they

being so much less liable to be taken out of place by drift ice.

18th. To remove the superintendence of the lights and buoys from the collector at Wilmington to the collector of Philadelphia, as very few vessels passing through the bay go into that port; and consequently the collector there cannot obtain any information direct from pilots or others relative to the neglect of duty of light keepers, or the misplacing or drifting of buoys.

The committee also call the attention of the Light-house board to the fact that the Delaware river and bay are among the most intricate and difficult of navigation of any of the rivers and bays of the United States; and as the distance from the ocean is so great, ocean steamers are compelled to navigate the bay and river at night, in order to compete in time with the lines of other ports; therefore the want of a sufficiency of lights and buoys is much felt and complained of.

Philadelphia already has six lines of ocean steamers, all of which are compelled to navigate the bay and river at night; and although the greatest care and caution are always used, yet running on shore is of

frequent occurrence.

The number of vessels navigating the Delaware is very great. dependently of those engaged in the foreign and general coasting trade, the statistics of the government show that the tonnage of the boat trade alone exceeds that of the whole foreign commerce of New York.

These facts will make apparent to the Light-house board the benefit which will be conferred on the commerce of the port of Philadelphia by carrying out the suggestions herein made, as it will enable vessels to pass the dangerous points in the bay and river by night as well as by day, and thus materially diminish the time now occupied in their navigation.

Under the old light-house system of the government, nothing could be obtained toward aiding the navigation of the Delaware. On the establishing of the Light-house board, the Board of Trade, being well aware from the frequent representations made to their body of the defects and wants of the mercantile community, appointed some months since a committee to examine into the matter.

The committee, therefore, after having carefully considered the subject, earnestly recommend that the lights and buoys mentioned should be placed in the Delaware, believing them to be of present necessity.

JNO. R. PENROSE, FRANCIS R. COPE, SAM'L C. MORTON,

Committee.

CHARLES BROWN, Esq., Collector of the port of Philadelphia. The above report having been submitted to and read before the directors of the Philadelphia Board of Trade at their last stated meeting, held on Monday evening, the 17th instant, "it was formally approved, and ordered to be transmitted, through the collector of the port, to the United States Light-house board."

Attest:

FRED'K W. GRAYSON, Secretary of the Board of Directors.

## No. 26.

Extracts from the report of Lieutenant A. M. Pennock, Light-house Inspector.

I would recommend that an appropriation be asked for four buoys to be placed on the shoals off Cherrystone; one for the tail of the southeast and one for the tail of the southwest spits making off from New Point Comfort; four for York spit and river; two at the entrance of Peankatank liver; two for the Great Wicomico river, Virginia; one in Chesapeake bay, a mile and a quarter east of Stingray point; five additional ones for the Rappahannock; one on a wreck in Chesapeake bay, about five miles southeast from Smith's Point light boat; and one on the spit of Drum

point.

I beg leave to call the attention of the board to the dilapidated condition of Smith's Point light-house. The entire illuminating apparatus requires renewing. The iron frame which supports the lamps is so weak that no great effort would be required to shake it down. The tower is badly cracked, and not more than thirty-five feet from the edge of the bank, which is fast giving way. To put this establishment in order the cost would be great. With a view to economy and utility, I recommend that a first class screw-pile light-house be built near the end of the spit making off from that point. Such a guide would do away entirely with the necessity of the light-boat stationed there, and the present light-house could be abandoned.

I recommend also a small screw pile light house to be placed on one of the numerous sheals near the entrance of the intricate channel leading into Cherrystone harbor, in the county of Northampton, Virginia. As there are no lights on that side of the Eastern shore, it would be of great service to vessels beating up and down the bay.

A small light should be placed on Drum point, inside of the Patuxent river. Vessels of all classes take advantage of this lee, and in thick weather several have brought up on the spit making off from the

point.

A small light on the end of the naval hospital wharf, opposite Norfolk, would prove of great service. It would guide vessels clear of Spinner's and Lambert's points, making it safe for them to run up the darkest night.

Accompanying this report is a petition to Congress, from the underwriters and some of the principal shipping merchants of Baltimore, asking for light-houses on Sandy point, Chesapeake bay, and False cape, Princess Ann county, Virginia. I strongly recommend it to the favorable consideration of the board.

The yearly shipwrecks and loss of life at or near False cape speak volumes in its favor. The signers of this petition desire it to be presented to Congress at such time and in such manner as may be deemed most advisable.

The appropriation for a light on Stingray point is too small. It is evident that a small light should be there, from the number of vessels that run on the spit. Strangers frequently keep out in the bay during the night, fearing to enter either the Rappahannock or Peankatank rivers; to

both of which this light would serve as a guide.

I am of the opinion that the beacon for Naylor's hole, for which an appropriation was made, if erected, would prove rather detrimental than beneficial. It would have to be so placed that in a dark night vessels would be in great danger of running into it, and, being a fixture, some damage might ensue. As a guide at this locality need be seen only a short distance, I recommend that two buoys be substituted. They could be placed so as to serve for a guide through the narrow channel.

Very respectfully, your obedient servant,

A. M. PENNOCK, Light-house Inspector.

No. 27.

Custom-House, Georgetown, D. C., October 8, 1853.

Six: I have the honor to state that, from information received from merchants of this district engaged in the foreign and coasting trade, it would add greatly to the safety and facility of vessels navigating the Potomac river from Georgetown, D. C., to Alexandria, Va., to have the channel of the river either staked or buoyed out between those towns.

Very respectfully,

ROBERT WHITE, Collector.

Hon. J. Guthrie, Secretary of the Treasury.

No. 28.

Eastville, September 30, 1853.

Gentlemen: In reply to your circular of September 1, 1853, asking for a description of such aids as may be required to navigation in this district, I most respectfully submit, that I have sought information from the most reliable seamen of my acquaintance, all of whom unite in recommending that a light boat should be placed at the Point of Shoals, which is at the entrance of both King's creek and Cherrystone, i. e. at the fork of these two creeks. These creeks are navigable for large

vessels, and the principal shipping from and to Northampton county is carned on on them. The steamer William Selden also enters Cherrystone twice a week with the United States mail. They cannot be entered, either at night or in a fog, on account of the dangerous shoals near their channels; and it is thought a light-boat, with a fog bell, would remedy this great bar to the convenience and interest of this community.

There is also a shoal known as the Middle Ground, which is dangerous to vessels passing up and down the eastern side of the bay, which could be avoided by the aid of a light boat and fog bell at the afore-

mentioned point.

I am also informed that a buoy at the westward entrance of Cherrystone creek would be vastly beneficial. Wrecks have happened upon the Middle Ground shoat, and there is always great liability of danger from that shoal. Pungoteague creek is of equal importance, and similarly situated to King creek and Cherrystone; a light boat is required there, and, if I mistake not, Lieutenant Pennock informed me it was contemplated to place one there. I have had no opportunity of obtaining information with regard to any other part of the district, but I believe Lieutenant Pennock has lately visited nearly every part of it, and can give you the desired information. That part of the district embracing Apatague light-house is under the inspection of Lieutenant McBlair, and is very remote from me. I can give no information in regard to it.

I am, very respectfully, your obedient servant,
JNO. S. PARKER,

Collector, &c., for the district of Cherrystone.

THORNTON A. JENKINS and EDMOND L. F. HARDCASTLE, Esqs., Secretaries of Light house Board, Washington, D. C.

# No. 29.

COAST SURVEY OFFICE, Washington, Wednesday, November 30, 1853.

DEAR SIR: I have received your note inquiring the locality of Sandy

point, Chesapeake bay.

I don't know but that there may be more than one Sandy point, but the one which is referred to, I am inclined to think, is at Cherrystone inlet, on the eastern side of Chesapeake bay, about nine miles to the northward of Cape Charles. If Mr. Wise or Mr. Baily has made application in regard to it to the Light-house board, this is the place.

Next to Pungoteague creek, which is about 25 miles to the northward, Cherrystone is the best harbor on the southeastern part of Chesapeake bay. The steamer runs there twice a week from Norfolk; and if the contemplated air-line railroad from New York to the south is constructed, here will be the steamboat landing by which to connect south across the Chesapeake.

The kind of light required here is exactly the same as the one required at Pungoteague; there being an immense bar, or rather flat, ex-

tending out on the port hand, which it is important to avoid on entering, and which a light would effectually subserve.

By making application to the office, a sketch or tracing of my survey

would no doubt be furnished you.

Very truly, yours,

JOHN J. ALMY,

Lieut. Comd'g and Assist. in the U. S. Coast Survey

Lieut. T. A. Jenkins,

Secretary of the Light-house Board.

No. 30.

Custom-house Office, Yorktown, Va., September 19, 1853.

GENTLEMEN: A light is indispensably necessary at the York spit. The soundings on the east side of the spit are gradual, and vessels are easily warned of danger. But not so on the southwest point. soundings up to the point are eight fathoms water, and the next instant vessels strike on a hard sand-bank. On the opposite side of the spit, the Egg Island shoals, and Jew's Marshes point, present another obstacle to safe navigation. Many vessels have been injured, and some wrecked, on these two points. At night, in a gale of wind, vessels are prevented from making the safe harbor of York river, by the danger of running either upon the spit or the Egg Island shoals, and are compelled to run all risk in the Chesapeake bay. In addition to the above mentioned, several masters of vessels, who have for years sailed up this river, have suggested the importance of a buoy being placed at Green point, and one at Sandy point, up the river. With the latter I am quite familiar. There are there sunken oyster-rocks-positions of which only are visible at very low tides. With the light-boat, and the buoys at the points severally designated, the navigation of this river, from the bay to its source, would become perfectly safe and easy for any class of ships or vessels, in the day or night, under any circumstances, and in any sort of I do sincerely hope the department will take this subject into serious consideration; and that these much-needed improvements, to which the people here have looked to in vain for years past, will now be accomplished, when the commerce of York river is rapidly increasing in importance. The accompanying documents exhibit the opinion of some of the most respectable and intelligent portion of this community, which I have deemed necessary to add to my suggestions.

I have the honor to be, gentlemen, very respectfully, your obedient

servant,

PHILIP J. BARZIZA, Collector.

To Messis. Thornton A. Jenkins, Edmond L. F Hardcastle, Secretaries of Light-house Board. No. 31.

Custom-House, Newbern, Collector's Office, September 13, 1853.

GENTLEMEN: There is at this time great complaints among scafaring men about stakeage; they all agree that it is very difficult to keep the stakes up at the different points of shoal. They all concur also in opinion that it would be better to have buoys placed at the following places, viz: Piney point, Garbacon, Wilkesbarre point, Cherry point, Otter creek, Hamilton shoal, Johnson's point, Fort point, Hanging point, Straddle and Green Spring point,

Very respectfully, your obedient servant, THOS. S. SINGLETON, Collector.

THORNTON A. JENKINS, EDMOND L. F. HARDCASTLE, Esqs., Officers of Light-house Board.

No. 32.

Custom-house, Elizabeth City, N. C., September 23, 1853.

Sirs: The only object brought specially to my notice is the erection of a light house at Roanoke marshes, for which purpose a memorial has been circulated, and, I understand, numerously signed by those interested in shipping. The memorialists represent that there was a lighthouse at the marshes some years ago; that owing to the refusal of the government to pay the exorbitant price demanded by the owner for the land upon which it was located, and his persistence in refusing to surrender it except at such exorbitant price, the government determined to discontinue it; that the absence of a light at that point net only exposes vessels and their cargoes to the dangers of the shoals, but also seriously delays them in their voyages; that in thick and foggy weather such light would enable them to pass through the "Narrows" without obstruction or detention, and to reach a harbor secure from boisterous weather, to which they are at present exposed; that there is no light within many miles of the proposed light; that the former site can now be purchased at a moderate price; and that there is a building upon it which could readily, and at very small cost, be converted into a suitable light-house. This memorial will doubtless be forwarded in a short time. From the representations that have been made to me by well-informed gentlemen, I feel warranted in commending this subject to your favorable consideration.

I have the honor to be, very respectfully, your obedient servant,
L. D. STARKE, Collector.

Lieut. THORNTON A. JENKINS,
Brevet Capt. Edmond L. F. Hardcastle,
Secretaries of Light-house Board.

No. 33.

Custom-house, Elizabeth City, N. C., October —,—

Sin: I transmit herewith the memorial of many persons interested in

navigation for a light-house at Roanoke marshes, in this district.

From the best information I can gather from the most experienced and

reliable captains of vessels, I am induced to regard this as a very indispensable aid to navigation, more so than any other that could be sug-

gested in this State, or perhaps any other.

In addition to the representations of the memorialists, I deem it only necessary to state, that the open area of water in the sound at the entrance of the narrow passage through the marshes is represented to be twenty miles wide, while the passage itself is only some three or four hundred yards in width; that there are no high lands or trees by which to direct the course of ships; that there is no light in the vicinity; that the sound is very much exposed and dangerous; and that it is always difficult, and frequently impossible, to effect an entrance into the narrow passage alluded to, at night or in thick, foggy weather.

Very respectfully, sir, your obedient servant, L. D. S'l'ARKE.

Superintendent of Lights.

Lieut. Thornton A. Jenkins, Secretary Light house Board.

#### No. 34.

Extracts from report of Capt. D. P. Woodbury, Light house Inspector.

Sixth District, October 15, 1853.

An open wooden tower, like the beacons recently proposed for Charleston harbor, near Federal Point light—the two to range nearly with the light-vessel on Horseshoe shoal—the object being to dispense with that light-vessel altogether; it is of little use. Vessels going up from Smithville pass over the foot of Horseshoe shoal by following the range of Price's Creek lights until they come to a buoy a little below the light-vessel, when they turn and take their course up the river.

The light-vessel is of some use at night in finding the buoy or turning point. The proposed Federal Point range, by its intersection with Price's Creek range, would give the turning point with still more accuracy. The light vessel is also of little use at night for vessels coming down the river; but its place in that particular will be fully supplied, I

believe, by the Cape Fear light proposed below.

The proposed beacon should be about three hundred yards from Federal Point light, would be tended by the same keeper, and the annual cost would of course be small compared with that of the light-vessel.

Estimated cost of the proposed beacon, with three lamps and

For an enclosed wooden lantern, and a fixed light with three

reflectors, on top of Charleston beacon, and steps leading thereto

\$1,500

1,000

The light—two lamps and reflectors in a small lantern—is raised by a windlass, and must of course be let down one or more times every night for triuming. The tower is five feet six inches square inside, and nine feet three inches square outside, at the base. It is open at the top, but covered with a roof supported by four posts resting on the top of the tower. The steps must be on the outside of the tower, and a small storm house must be made in the rear of the proposed framed lantern.

For rebuilding Sullivan's Island beacons and placing in each three fixed lamps and 21-inch reflectors at a suitable elevation, in place of the present single lamp and 15-inch reflector, moving up and down a mast

For purchase of site and erection of keeper's house

6,000

For a lens light of the sixth order, with the necessary fixtures, to be placed on top of the walls of Fort Sumpter, on the eastern side

\$1,000

This light, and the new light to be erected on the battery, will range with the bar of the north channel, which vessels are not able to cross at night for the want of such aid.

Tybee Island knoll light-vessel might be replaced by a small light-house on a neighboring shoal, but I present no estimate at the present

time.

For five iron buoys for St. Helena bar, with cables and sinkers \$3,000

There are now three buoys on this bar—two of them oil-casks. The necessity of the new buoys—two of them to take the place of the oil-casks—is urged by the collector at Beaufort, South Carolina, and was pointed out to me by the captain of one of the Savannah and Charleston steamers.

There are doubtless other points in this district, particularly in Georgia and Florida, where buoys would be of great service, but I am unable to point them out at the present time.

### No. 35.

SMITHVILLE, BRUNSWICK Co., N. C., October 22, 1853.

Sire: In my letter of the 15th instant I recommended a beacon-light near Federal Point light-house, in view of discontinuing the light-ship on Horseshoe shoal. Yesterday I enclosed a copy of a letter from the chairman of the commissioners of navigation, Wilmington, relating to that subject. I now subjoin an extract from a letter just received from the collector at Wilmington, bearing on the same.

You will see that the light-ship is regarded as of little use by those persons whose opinions are entitled to most respect, as representing the

classes most interested.

I have asked for an appropriation; but without waiting for that, I would like to receive directions to put up the proposed beacon and then

discontinue the light-vessel.

I have all necessary apparatus here, having spare (dismounted) lamps and reflectors at Price's creek and Oak island. I don't think the whole cost of the beacon, complete, will exceed \$\$600.

It will be similar to the proposed Charleston beacons, of the same size at top, but not so high. I would like much to put it up, as a means of gaining experience, before putting up the higher Charleston beacons.

Very respectfully, your obedient servant,

D. P. WOODBURY,

Light house Inspector.

T. A. Jenkins, Esq., Secretary Light house Board, Washington, D. C.

> WILMINGTON, NORTH CAROLINA, October 18, 1853.

DEAR SIR: Your communication with regard to the removal of the light-boat, and the substitution of a range of lights on Federal point, was duly received, and laid before the "commissioners of navigation"

at their last regular meeting.

The board see but one objection to the change which you propose. From Orton point to the turn of the channel, as indicated by the range of lights at Price's creek, the light-boat furnishes the only guide to vessels going down the river at night. If the light-boat is removed there will be no guide, and you propose nothing to supply the deficiency.

I am instructed by the board to say, however, that for reasons obvious to you they attach but little importance to this objection, and regard it as much more than counterbalanced by the benefits which will unquestionable appears to a bound of the same than the same transfer.

tionably result from the change.

There is but little navigation down the river at night—that little is confined to a small class of vessels; and the board are inclined to believe that they may be very easily guided by the lights which are new in use.

The board have delayed their action on this matter, that they might have full and free conversation with pilots and shipmasters in whom they had confidence. They have done so, and find no one to differ from the opinion expressed above.

With sentiments of high regard, your obedient servant, ROB'T H. COWAN, Chairman, &c.

Capt. D. P. WOODBURY, United States Engineers.

No. 36.

Superintendent's Office, Washington, N. C., Sept. 29, 1853.

Sin: I have to state that I have made all the inquiry in my power, and am enabled to state that there is nothing required as aids to naviga-

tion in this district, unless the Light-house board should deem it advisable to supply the deficiency that now exists in stakes, by placing buoys in their stead. I have conversed with captains and pilots in reference to this matter, and their united opinion is in favor of buoys, as better and more permanent marks to navigation. I have made the inquiry as to the number that would be required in addition to those now in use, and find that ten additional buoys would answer for Neuse river; thirty for Pamlico river and the sound as far as Mattamuskeet; ten for Ocracoke inlet; and fifty for Core sound—making in all 104 buoys. The cost of the buoys and iron-work (not including sinkers) would be about \$15 or \$16; and one person making such a quantity, I doubt not, it could be done for even less. Should I know of any other improvement I will inform the board immediately.

Very respectfully, your obedient servant,

H. F. HANCOCK, Superintendent.

Lieut. Thornton A. Jenkins, Secretary.

#### No. 37.

Extract from two petitions, numerously signed, of citizens of the United States, and owners of vessels, carriers, merchants, planters, factors, residing in the State of South Carolina.

In view of these facts, and in order to remedy the evils complained of, your petitioners would respectfully suggest, and pray your honorable body to establish, a light-house and corresponding beacon-light on the main land at North Edisto; and also two buoys at the North Edisto inlet; to remove the St. Helena light ship from its present position to Cornbahee bank, for the purpose of enabling vessels (particularly at night or during foggy weather) to clear a very dangerous shoal; to establish a light-house and corresponding beacon-light in the stead of the St. Helena light-ship, on the northern point of Hunting island, to range for the Swash channel; and six large buoys to be placed on the points of the large dry shoals that are in the sound and about the bar-Also, that the light-ship, now at "Martin's Industry," be removed to Grenadier shoal, entrance of Calibogue sound, with a range beacon to be placed up Calibogue sound, to be used in connexion with said lightship; and that, in the place of the said light-ship, another, with a lamp of twice the illuminating power, be established at "Martin's In-And also to establish a light-house and a corresponding beacon-light for Port Royal entrance, to be located in the neighborhood of Hilton Head; and five buoys for Port Royal bars and harbor.

No. 38.

DISTRICT OF ST. JOHN'S, Port of Jacksonville, September 29, 1853.

Sin: In reply to circular of Light house board of the 1st instant, in relation to aids to navigation, I have the honor to report, that in my opinion, based on the information I can obtain, the navigation of the St. John's river and bar might be considerably improved by the following aids to those existing at present, viz:

1st. A beacon or range light to be placed to the eastward of the present light, to range with the same, to assist in crossing the bar, so constructed on rollers that it may range at all times with the large light, to be moved by two hands; the cost of which will not exceed \$1,500, ex-

clusive of lantern.

2d. Two buoys (copper sparred) to be placed at the narrows of Brown island; also two at the Corwin shoals near Dame's point, on St. John's river; also two near Dunn Creek flats, on said river; also some stakes or beacons at different points of the Marsh islands, on said river, the cost of which will be trifling. The reason for recommending sparbuoys is, that vessels can pass over them without dragging them adrift; reason for coppering is on account of worms.

Very respectfully, your obedient servant,

JAMES G. DELL, Collector.

To Lieut. Thornton A. Jenkins, Secretary Light-house Board, Washington, D. C.

### No. 38.

Extract from a letter from Dr. A. J. Baldwin to General J. G. Totten, chief engineer, dated Jacksonville, November 3, 1853.

Since I last wrote you, I have been informed by residents near the mouth of the river that considerable damage to the light house grounds has been sustained from the encroachments of the river upon that side; and you will recollect that the plan presented by me contemplated the arrest of this encroachment as one of its results, and one of the appropriations for carrying it out was obtained in the light-house appropriation I mention this as a further inducement for prompt action in this bill. matter; but I beg you not to understand me as urging it upon your attention in the spirit of complaining at the delay which has occurred, but simply as a fact with which you had not probably been made acquainted before. I know your mind is occupied with a multiplicity of business, pressing upon you in all directions; hence I have felt it my duty to inform you of this new fact, as requiring action on the score of economy in the expenditure of the public funds, for it is very evident that the expenditure will be increased the longer the causes which, are washing away this bank of the river are allowed to operate. In my humble opinion, the time is not distant when the present stratum will be destroyed, if the causes now in operation for its destruction are not

soon arrested; and I fully believe they can be permanently removed, and I feel sanguine of being able to make this apparent to the members of the commission who may be appointed to examine this subject.

### No. 39.

Extract from a letter from Lieutenant H. G. Wright, corps of engineers, to the secretaries of the Light house Board, Washington, D. C., dated Garden Key, Fla., November 1, 1853.

Light house at the mouth of the St. John's river, Florida.—An appropriation of \$10,000 was made in 1852 for the protection of the site of this light, on which the sea had been fast encroaching for some years; a survey of the environs was made in connexion with that for the improvement of the bar of the river, and the causes of the encroachment carefully examined. It was believed that the process of encroachment was working its own remedy, by forming a bank in advance of the beach, which would, in a short time, effectually destroy the action of the waves on what was then the shore-line; at any rate, that the buildings were secure for some time to come. That in case the encroachment should continue to progress, so as to endanger the safety of the structures, it would be better to change the locality of the light than to attempt the protection of the present one. The present tower is too low to be seen by vessels close in shore to the southward of the entrance; and as its walls are hollow, it is doubtful whether it would be safe to add to its height. It will soon need considerable repairs; and the dwelling, which is nearly buried in sand, will, before long, require a considerable expenditure for repairs to make it habitable. All these reasons induced me to recommend a new tower and dwelling, in a better location, rather than protect and repair the present ones. A plan was submitted for stopping the encroachment of the sea, but its adoption was not recommended for the reasons given.

## No. 40.

ST. AUGUSTINE, FLORIDA, November 5, 1853.

GENTLEMEN: In accordance with a circular from the office of the Light-house board, directing me to furnish the annual memoir in relation to the condition of the site of the light-house at the mouth of the St. John's river, Florida, I have the honor to report that I visited the locality on the 1st instant, and transmit herewith the result of my observation.

This site is a portion of a long and narrow sand beach, which forms the right bank of the river near its mouth, having to the rear an extensive marsh, through which the water circulates in small channels, and which is flooded almost entirely in very high tides. The waters within this space communicate with the river by several inlets, of two of which only it is of present concern to speak. One of these, some distance east of the light-house—by the action of the currents flowing through it, taken in conjunction with that of the waves upon the bank of the river—has caused a long spit to be formed parallel and exterior to the shore, and extending so far as to be opposite, at its western extremity, to

the keeper's house. The other inlet serves as a channel for the waters at tides only above the average, and is contiguous to, and directly west

of, the keeper's house.

From this house to the shore extends one range of sand hills; from the light house to the shore there is another range; and about two hundred and fifty feet to the east of the light a third is to be found. The two valleys thus formed are in danger of becoming, in the space of a few years, two other inlets, by the formation of which the present site will be entirely destroyed. These valleys, being channels for the winds, are excavated by its action every day; that one directly east of the keeper's house having become three feet deeper, for some distance back from the river bank, since April last, while at the same time the waters have gained about thirty feet along the front of the site most exposed, during the same interval.

The spit above mentioned has been broken through in one place, leaving the valley directly east of the light tower more exposed to the action of the waves. I could not ascertain from the keeper whether the spit has increased since the date of Lieutenant Wright's report, and have requested him to mark its present extremity, as a point for future com

parison.

Any work of protection for the site should extend across the mouth of the inlet partially formed, and west of the keeper's house, and should run in an easterly direction to cover the openings of the two valleys before spoken of. For this purpose I would recommend a line of piling along the river front, of about seven hundred teet in length, and at a probable cost of \$2,500. To protect the premises in the rear from being flooded by the waters of the marsh, an embankment is also needed, and, to adopt Lieutenant Wright's estimate, at a probable cost of \$200.

The above views, which would appear evident upon a cursory examination of the site, are respectfully presented to the consideration of the board; as, also, whether it be better to adopt the temporary expedient for protection just mentioned, or leaving the site to its own power of resistance to the waves, to seek a better and permanent location for the light-tower. The site will probably endure, unaided by artificial means, for

several years.

The lantern leaks very badly through both the top and sides; new window-frames are required in the tower; and a portion of the newel-post, much decayed, requires replacement. The steps, during the past season having separated from the post, incline perceptibly to the interior, and an accident might happen from this defect. The roof of the keeper's house will shortly require renewing; it is much decayed, though it does not leak badly at present.

A door and platform have lately been placed in the tower; and the newel-post strengthened by dat iron bars nailed along its length, though this has not remedied the separation of the steps from the newel.

All of which is respectfully submitted.

I have the honor to be, very respectfully, your obedient servant, JOHN NEWTON,

Lieutenant Engineers.

Lieut. THORNTON A. JENKINS, U. S. N.,
Capt. E. L. F. HARDCASTLE, U. S. A.,
Secretaries of the Light house Board, Washington.
17

#### No. 41.

## PHILADELPHIA, October 26, 1853.

Sire: I had the honor to receive, some time since, the printed circular from your board, calling on me for "suggestions in relation to such aids to navigation in the seventh district as may have come to my notice, and be deemed of present necessity, in addition to those already existing, or

authorized by law."

In reply I must remark, that my duties in this district having been of a special character, it has not been in my power to make such examinations as would authorize the presentation of estimates; at the same time, a general knowledge of the character of existing works, and of those proposed, so far as laws already enacted indicate, together with the general wants of this district, place it in my power to make some suggestions

which may prove of value.

Commencing at Cape Florida light, I would respectfully suggest the raising of the tower as far as the present structure will permit, and the placing therein a Fresnel illuminating apparatus of the second order, to replace the present catoptric apparatus; and as a glance at the sketch of Key Biscayne, published by the Coast Survey report of 1851, will show that this light is not required to illuminate more than two hundred degrees of the horizon, I would recommend that the remaining one hundred and sixty degrees be filled with the totally reflecting rings of the Holophotal plan, as designed by Mr. Thomas Stevenson.

I am not aware of the actual condition of the tower at this point; but if it is properly founded, and built in a strong and substantial manner, I should think a light iron structure could be placed on top of it, that would add twenty or thirty feet elevation to the focal plane, and increase

greatly the range of this important light.

I understand the reefs and shoals extend some eight or ten miles to seaward of this light. Its want of elevation, and the inefficient condition of its illuminating apparatus, gives it an actual and available range but a short distance outside of the dangerous ground. I am not able to present an estimate, from want of necessary data; but it has occurred to me, the operations at present going on at Cape Hatteras would serve as

a guide in asking for an appropriation for this object.

The light next in order to Cape Florida is the one recently erected on the Carysfort reef. I have already reported to the board the difficulties which prevented the exhibition in this tower of a Fresnel illuminating apparatus, and the necessity there was of setting up a temporary catoptric apparatus. I am quite satisfied, if the keeper will faithfully attend to this light, that the present apparatus is as efficient as one of reflectors can be; but I would most urgently press on the board the expediency of replacing it, without delay, by a revolving Fresnel apparatus.

The lantern being designed and prepared for a lenticular apparatus, the only expense to be incurred would be its first cost in France, transportation to the site, and the necessary labor in setting it up; all of which, I think, ought to be covered by the sum of \$11,000.

An appropriation having been made for a light house on Coffiu's Patches, and the law requiring it to be placed "half-way between the Carysfort reef and Sand key," seems to settle the question as to the

number of lights on the Florida reef. I am now preparing the designs and estimates for a suitable structure for a first-class light at this point.

The light-house at Sand key, as previously reported, was illuminated on the 20th July last. It is believed this light is highly efficient, and answers all the wants of navigation at this point. When the structure (for which designs are now being made in this office) is erected in the Northwest channel, Key West harbor, to replace the present light ship, it is believed this harbor will have received, so far as lights are concerned, all the attention it deserves. The light at Tortugas is one of the most efficient reflection lights I have seen. Nevertheless, in my judgment, the elevation of the tower should be greater; and, for the purpose of penetrating a dense state of the atmosphere, I would recommend the placing thereon a second-order fixed Fresnel apparatus.

When these changes shall be made, and the new works designed are executed, the Florida reef will be as well illuminated as any part of the world. The beacon stations of the Coast Survey are of great value in pointing out this dangerous reef during the day; they, however, should be higher, as I understand it is the intention of the department to make

them.

I am under the impression that a day beacon is wanted on one of the outer shoals of the Tortugas, which is at such a distance from the light on Garden key, that navigators should have their attention called to it before getting too near. My information is so vague, that I cannot indicate the shoal, and only refer to it here that the question may be raised, and the necessary investigation be made if the board deem it necessary.

Trusting these suggestions may be of some value, and with the earnest

desire to forward in all things the views of the board,

I remain, sir, most respectfully, your obedient servant, GEO. G. MEADE,

Lieut. Topographical Engineers.

Capt. E. L. F. HARDCASTLE, U. S. A., Sec'y Light-house Board, Washington, D. C.

## No. 42.

## PHILADELPHIA, October 31, 1853.

GENTLEMEN: In compliance with the circular issued by your honorable board, dated September 22, 1853, I have the honor to submit the following report, showing "the progress made upon, and the condition of all works belonging to the United States light-house department, up

to the present date," under my charge:

Light-house on Sand Key, Fla.—This work was erected, and furnished with the necessary supplies, during the present year. A light was exhibited therefrom on the 20th July last, and the work turned over to the Treasury Department at the close of the last quarter. A detailed report was transmitted to the board, (through the Bureau of Topographical Engineers,) giving a minute history of the operations at this work, to which reference is respectfully made for all such information. This report was made the 27th August last, and was transmitted to Washington on that day.

Beacon on the Rebecca sheal.—An examination of this sheal was made in May last, and on the 28th instant I transmitted, through the Bureau of Topographical Engineers, a report of the same, and submitted a pro-

ject for a beacon, accompanied by designs and estimates.

Iron pile light house, N. W. channel, Key West harbor.—An examination of the site was made in June last, under the instructions of the board, and the report of the same, with plans, estimates, &c., will be presented to the board, and will certainly be forwarded during the present quarter.

Light house at Cedar Keys, Florida.—An examination of Sca-horse key was made in August last, and so soon as it can be prepared, a report, with plans, estimates, &c., will be presented to the board, which, it is

confidently anticipated, will be during the current quarter.

Light house on Coffin's Patches, Florida Recfs.—This reef, under the orders of the board, was examined in June last, and the work of preparing the necessary drawings and estimates to accompany the report to be made, is now actively prosecuted in this office. A work of this magnitude (being of the first class) requires so many drawings, and these are so necessary to form any idea of the weight and consequent cost of the materials, that it is not deemed safe to assert at what precise time they can be submitted; but every exertion, consistent with the other duties imposed upon me, will be made to prepare them as soon as possible.

Very respectfully, your obedient servant,

GEO. G. MEADE,

Lieutenant Topographical Engineers. Lieut. T. A. Jenkins, U. S. N., Capt. E. L. F. Hardcastle, U. S. A.,

Secretaries of Light-house Board, Washington, D. C.

## No. 43.

## Collector's Office, Key West, October 19, 1853.

GENTLEMEN: I have the honor to report:

- 1. That those parts of the Atlantic and Gulf coasts of Florida which lie within this collection district are deficient in lights and buoys. There is but one opinion upon this subject in the merchant marine familiar with it. My judgment is based upon a residence of twenty) ears here, upon an intimate knowledge of the shipwrecks, the business of wrecking within this district, and of the causes generally assigned for them.
- 2. In my judgment there is an urgent necessity for a good light upon the main land of Florida, either at St. Lucie sound, Grenville inlet, Cooper's hill, or the Black Rocks. These points are all near together, upon the elbow of the coast, (as shown upon the abstract hereunto annexed,) at the entrance of St. Lucie sound. The steamers running between the Atlantic ports and the Gulf, including the Law line and the Isabel, between Charleston and Cuba, all endeavor to get hold of Cape Canaveral; and from thence a south course, as reference to the map will show, would put them off the elbow at the point above mentioned. It

being very important for them to keep close in with the land, to avoid a two-and-a-half or three knot stream, a light at this point would enable them to do so with security. A light at Mosquito inlet, for similar reasons, is necessary, though, in my judgment, of less importance. In 1837, \$7,000 were appropriated for rebuilding and changing the site of

the old light at this latter point.

3. The next point at which a light is most urgently wanted, following the course of the reef, is at the Sister keys. These are two small, rocky, elevated keys, more submerged in the heaviest gales, standing well out from the general line of keys, near Key Vacas, about forty miles from this place. They lie between three sunken reefs, all of which have proved very perilous to navigation, being the Delta shoal, distant three and a half miles, S. by W. ½ W.; Coffin's Patches and Dry Rocks eight miles east of them.

4. The next point is the Marquesas islands, twenty miles about W.  $\frac{1}{2}$  S. from this place. I regard a good light here as of the first consequence. A glance at the chart will show its bearings upon the navigation around the tail end of the Quicksands, of vessels bound into the Gulf; and such a light would be of the greatest advantage to vessels making a passage from the Gulf around the Tortugas, or between the Tortugas and the

Quicksands.

5. Key West harbor is almost destitute of buoys. To ordinary merchant vessels, indeed to all vessels drawing under 16 feet, the existing harbor buoys afford but little aid. Such vessels could come into port, by night or day, with the lights and lead, as well without as with them. They are of great consequence to naval ships of heavy draught; but since Lieutenant John Rodgers has submitted his hydrography of the harbor, it is evident that they are totally insufficient to protect a heavy ship from Heavy ships may, and have, run in safely; but as there are some 12 or 15 coral cones, of narrow base, standing up like ninepins from the general level of the 27 feet channel, directly in the track of ships, striking or not striking is a mere matter of chance; no pilot can mark, designate or avoid them. Indeed, it is difficult to find them, as they are not more than a fathom broad at the apex. In my judgment, they should be at once buoyed or blown down by Maillefert's system. The expenditure consequent upon one of our frigates striking either of them, would exceed the cost of all necessary buoys.

With great respect, I am, gentlemen, your obedient servant,
JNO. P. BALDWIN,
Collector, and Superintendent of Lights.

Lieut. Thornton A. Jenkins, U. S. N.,
Brevet Capt. E. L. F. Hardcastle, U. S. T. E.,
Secretaries of the Light-house Board, Washington City.

## No. 44.

Extract from the report of Captain D. Leadhetter, corps of engineers, light house inspector, 8th district, dated Mobile, Alabama, November 21, 1853.

For the next year I am at present prepared to offer only the following project:

Projecti						
For new	light-hous	e at Port Pontcha	rtrain -	-	•	\$6,000
Do	ďo	Bayeu St. Jo		-	-	6,000
Do	do	New Canal		-	•	6,000
	on light at	Proctorsville -			•	3,000
		east end of Horn	island		-	1,500
		ent five range-stak		octaw	Pass	•
and D	og River b	ar, Mobile -			-	1,500

A new light house is much desired by the people of Florida, on the southwest cape between Appalachicola and St. Mark's. It is needed to warn vessels against the Ocklochony shoal, which lies east of that cape, and out of range of any existing light. Vessels bound to St. Mark's and Appalachicola are often endangered from the want of it, and the light would be of the greatest service to the Gulf coast mail line of steamers. The southeast end of the shoal should probably be marked, too, by a bell-buoy; but I consider that the Coast Survey can give the best information with regard to both, and therefore refrain from a more urgent representation. I believe that both are necessary to the sale navigation of these waters.

With regard to the new light-houses proposed on the south shore of Lake Pontchartrain and at Proctorsville, it need only be said that those now existing are wholly worthless, and are being repaired at this time, only in the hope of making them serve till new ones can be built.

The beacon on the east end of Horn island is asked for more particularly by the steamboat interest between this place and New Orleans. All the captains represent it as necessary. In the winter the prevailing northers drive the water out of the sound, leaving it too shallow for the boats to go through Grant's Pass, and they are thus obliged to go outside of Dauphin island. In coming east they pass out of, or going west run into, the sound, close in to the east end of Horn island. The point being low, and the weather often foggy, they are detained with the mails for want of the landmark proposed.

The range stakes at Choctaw Pass and Dog River bar have hitherto been kept up by the steamboat interest at this place. Some of them are lighted at night, and this should be done by the government when they are made permanent. The channel to be dredged by the government is identical with the existing one, and the positions of the stakes, as represented on the "sketch" herewith, are the proper ones.

A cast iron pile at each point, rising ten feet above the water, with cross wings of four feet spread, would be sufficient. All the captains here unite in asking for this improvement, and I cordially recommend it to the adoption of the board.

No. 45.

Inspector's Office, 8th Light-house District,
Mobile, Alabama, November 26, 1853.

Sir: By the enclosed letter, received this morning from W. Alex. Gordon, esq., president of the Mexican Gulf Railroad, and keeper of the beacon-light at Proctorsville, Louisiana, I learn that this latter establishment was destroyed by fire on the night of the 23d-24th instant.

A description of it will be found in my report of inspection last spring. The building was of no value, except as being available till another could

be erected.

I shall direct Mr. Gordon to keep up the light, in the manner which he has adopted, and shall visit the place soon.

Very truly, sir, your obedient servant,
D. LEADBETTER,
Captain Engineers, Inspector 8th District.

Captain E. L. F. Hardcastle, Necretary Light-house Board, Washington.

#### No. 46.

Extract from the report of the special board for inspection of the work performed by New Orleans tow-boat companies, in deepening the channel through the bar at Southwest Pass of Mississippi river, dated November 14, 1853—board comisting of Bt. Major Beauregard, corps of engineers, and Bt. Major Reynolds, 3d artillery.

"In conclusion, the board will take the liberty to recommend that a bell-buoy should be established at the entrance of the Pass, near one of the outside buoys, to direct the pilots in dark nights or foggy weather, for they complain that under these circumstances they dare not venture to take a ship in, being afraid to steer a little too far to the right or left of the entrance. These channel buoys, which are apt to be injured or displaced by the tow-boats constantly passing to and fro, ought also, in the opinion of the board, to be placed under the immediate charge and especial care of the revenue cutter, which is almost constantly anchored about this bar."

#### No. 47.

Collector's Office, Pensacola, October 16, 1853.

Sire: In reply to your communication addressed to me, concerning the aids to navigation which might be required in this harbor, I beg leave to refer you to the accompanying communication, received by me from Commodore Josiah Tattnall.

I entirely concur with him in his suggestions, and think that nearly

everything requisite is embraced therein. In addition, however, I would recommend that new machinery and a more brilliant light be supplied to the light house.

With these alterations and additions I think that our harbor, with its great natural advantages, may be rendered accessible at all times to the

most unskilled navigator.

Very respectfully, your most obedient rervant, JOSEPH SIERRA, Collector.

THORNTON A. JENKINS, U. S. N.,
Secretary to Light house Board, Washington, D. C.

COMMANDANT'S OFFICE, Navy Yard, Pensacola, October 13, 1853.

Sin: I have the honor to furnish you with the results of my inquiries in regard to the improvements contemplated at the entrance of this harbor.

I consulted with the two pilots, Messrs. Oldmixen and Jones, and with the master of the yard, Mr. Pearson, all three well acquainted with

the subject, and have come to the following conclusion:

The light-house is thought to be well located, but altogether too low, as it is, from many points at sea, concealed by the lofty pines which abound on the coast. It should therefore be carried up some twenty or twenty-five feet higher, or a new one built. A beacon near Fort McRae would also be very useful.

These changes, with a buoy in the deepest water of the bar, and one on the apex of the Middle Ground, will render the entrance to this harbor

easy by night or day.

I am, sir, respectfully, your obedient servant,
JOSIAH TATTNALL, Commandant.

Joseph Sierra, Esq., Cotlector of the port of Pensacola.

## No. 48.

Extracts from a communication from Lieut. Montgomery Hunt, U.S. N., Light-house Inspector of the 9th district.

"The eastern shore of Padre island, extending for over one hundred miles due north and south, presents such an unvarying topography, that without the latitude by observation, the mariner cannot determine his position with any degree of accuracy. There is no high land on this island, or beyond the Laguna del Madre, on the main shore, that can be made available as a guide; and thus, as there are no means of determining the direction and force of the current unless quite near the land, it becomes a matter of speculation, rather than of certainty, as to what distance any observed point may be from either end of the island. When the parallels of latitude and longitude are cut by the shore-line of a coast at any considerable angle, either one of the above data will form an approximate

guide to the other; but when the shore-line coincides with either, the other must be determined by actual observation, or by some well known landmark. With these facts in view, I would suggest that two blind beacons be erected upon the eastern shore of Padre island, at the distances of thirty and sixty miles, respectively, north of the harbor of Brazos Santiago. The one might be a single screw-pile, and the other a tripod upon screw-pile foundations, with an elevation of fifty feet above the soil.

"The necessity for buoys in this district has been brought to your notice in the several communications which I prepared from time to time, as the circumstances which called them forth were presented to me. I will therefore merely add, that a large-sized buoy is required off Galveston bar, about one mile east by north of the outer buoy, which now marks the channel, or a screw-pile shaft should be sunk upon the bar itself, that vessels may readily determine the position of the entrance at any reasonable distance to the seaward."

#### No. 48 bis.

Engineer Department, Washington, October 28, 1853.

Gentlemen: I have the honor to append, for the information of the Light house Board, an extract from a memoir of Lieut. Walter H. Stevens, corps of engineers, recently received at this department; and am,

Very respectfully, gentlemen, your most obedient,

JOS. G. TOTTEN,

Brevet Brigadier General, U. S. Engineers.
To the Secretaries of the Light house Board,
Washington City.

"Since Captain McClellan reported on Pass Carvallo bar, I have been over it, and at the suggestion of the pilots and experienced ship-masters, would recommend, if in my province to do so, the establishment of three buoys: one on the outer extremity of the bar; one on the inner side; and one off the end of the Middle shoal, near Decrow's Point."

#### No. 49.

Extract of a letter from the Collector of Customs at Saluria, Texas, dated October 20, 1853, recommending—

A light-house at Aransas Pass, and two buoys for the bar. I believe the buoys are authorized by law, having been once placed, but long since washed ashore.

A light on Half moon reef, in Matagorda bay, and a light on Gallinip-

per Point, Lavacca bay; both similar to the one erected on Redfish bar,

in Galveston bay.

Four buoys, two for the bar and two for the bay. The buoys were placed several years ago on Pass Carvallo bar, but, like those of Aransas bar, have been driven from their anchorage.

#### No. 50.

Office Light-house Inspector,
Buffalo, July 21, 1853.

Sir: In accordance with your orders, I have examined the light house

pier at the mouth of river Raisin, near Monroe, Michigan.

The beacon is a frame structure, having a foundation of piles, which remains secure. The pier-head or crib work surrounding this foundation has settled unequally, so that the lake end is three feet lower than the land end. It was probably built with a bottom, to which this settling must be attributed. The timber being in a good state of preservation, it would not seem judicious to tear down any portion of it. I therefore propose to place a protecting crib at the extremity of the pier, on its prolongation, and at a distance from it of about three feet; the openings between the pier-head and the new crib to be covered by a double row of piles, well secured by lateral ties, so as to prevent the washing out of the stone. Build up the present pier-head to its original height, and throughout this portion tie it firmly with the new work. crib, besides offering protection to the new beacon, also prolongs the light house pier, which is the weather pier, about thirty feet. It is proposed, also, to close two breaches in the pier, and repair in front of the keeper's house, which will exhaust the amount of the appropriation.

A portion of this pier adjacent to the pier head, for a distance of 364 feet, remains in an unfinished though perfect state of preservation. It is submerged about three feet. It is 18 feet wide. The posts rising some four feet above the water, tend to break the wave. To these posts a foot bridge is attached, which enables the keeper to serve the light. The remaining portion of the pier, about three logs above water, and of a length of 512 feet, is in a very dilapidated condition, and will need renewing very soon. A portion of it has an inclination towards the channel, owing to its narrow base, which is only eight feet. In renewing it, a work with a base of much greater width should be constructed.

I submit herewith an estimate for repairs, limited to the amount of the

appropriation.

Very respectfully, your obedient servant,
J. C. WOODRUFF, Capt. Top. Eng.,

Light house Inspector, 10th District.

Capt. E. L. F. HARDCASTLE, Corps Top. Eng., Secretary Light house Board. Estimate for a protecting crib, 28 feet by 35 feet, to cover the pier-head on which stands the beacon at the mouth of river Raisin, Michigan.

### J. C. WOODRUFF,

Captain T. E., Light-house Inspector, 10th district.

Capt. E. L. F. Hardcastle, Corps Top. Engs., Secretary of Light house Board.

#### No. 51.

Extract of a letter from W. B. Snowhook, Esq., superintendent of lights at Chicago, Illinois, dated October 38, 1853.

The improvement of the harbor at Michigan City consists of a breakwater, connecting with which is a bridge pier, being built by government. To enable vessels to enter this harbor at night with safety, a beacon should be erected when the works are completed. Considering the rapid increase of the commerce of Michigan City, I consider this beacon as being absolutely necessary, and is much desired by the citizens of that

place.

At Waukegan a breakwater is in progress of construction, under the directions of the War Department. I would recommend that an iron light-house, on a suitable crib-work foundation filled with stone, be built at the north end, and connected with the breakwater now in progress of construction, where a light of some kind will, in my opinion, be abso-

lutely necessary.

The present light-house, being half a mile west of the breakwater, would not then be required. I would beg leave to state here that this light-house is in a dilapidated condition, and defective in every respect; and, if it is the intention of the government to preserve it, the necessary repairs cannot be made too soon. The tower is built with soft brick, the centre of the wall being filled with a mixture of gravel and bad lime, with little if any adhesion. The action of the frost has caused the outside brick to scale off in many places to a depth of three inches in the wall. The foundation was not laid deep enough in the ground, and an embankment was made around the base to protect it from the action of the frost.

The deck or platform is lower, instead of higher, at the centre; consequently the water lodges around and runs inside the lantern. It will be seen, from the present condition of this light-house, that the repairs, if any be made, would require a new outside wall of hard brick, to be built from foundation to deck, with a stone coping on the top, and the deck raised in the centre and covered with galvantzed iron of a proper thickness. The work should be done by days' work, properly superintended, as contract work is almost invariably slighted.

At Chicago harbor, I think that eventually it would be a saving to government to construct an iron beacon, similar to that above described, on the end of the north pier, in place of the frail structure in present use.

I am satisfied that three good and permanent buoys, placed as follows, would benefit navigation: one on the south end of the bar, from the end of the north pier south, 35° east, 1,100 feet; one on the south side of the north channel, from the end of the north pier south, 70° east, 350 feet; one on the north side of the north channel, from the end of the north pier, 60° east, 175 feet.

If buoys could be kept stationary at the places above designated, it would undoubtedly be a great benefit to vessels of all descriptions, when entering and leaving the harbor, and would be the means of preventing

many vessels from getting aground on the bar.

The harbor at Calumet river, which has been hitherto entirely neglected by government, could be made, with comparatively small expense, one of the best harbors on the western lakes. By removing the bar at the entrance, it would afford protection to the shipping, no matter from what quarter the wind might blow.

When a strong north or northeast wind blows, vessels making the port of Chicago are in danger either of being driven against the south pier, or of being carried away south and beached near the mouth of Calumet river; whereas, if the bar were removed, they would have no difficulty in making the entrance of Calumet river and finding shelter.

making the entrance of Calumet river and finding shelter.

Every season several vessels are driven ashore at this place, and under these circumstances. In consequence of this bar, the mouth of the river has become so changed that the light-house is now about half a mile from the mouth, whereas the original mouth was close by it.

I am, very respectfully, your obedient servant,

WM. B. SNOWHOOK, Collector, and Superintendent of Lights.

Lieut. Thornton A. Jenkins, and Capt. Edmb. L. F. Hardcastle,

Secretaries of the Light house Board, Washington.

### No. 52.

## To the Honorable the Secretary of the Treasury:

We, the undersigned, vessel owners, captains, and others, interested in the commerce of the lakes, would respectfully represent that the keeping up of the light at the mouth of the Calumet river results in serious inconvenience, and greatly endangers both property and life, from the fact that there is no harbor, and the light is mistaken for that at Chicago.

In view of these facts, we respectfully petition your department to

have the same discontinued. Chicago, Oct. 28, 1853.

No. 53.

Bureau of Topographical Engineers, Washington, November 10, 1853.

Sin: In the light-house law of March 3, 1853, there is an appropria-

tion in the following words:

"For making the foundations of two light-houses, (one to be a bear con-light on the St. Clair flats) ten thousand dollars, the places to be selected, and the work executed, under the direction of the Topographical Bureau."

The foundation of these structures will cost much more. It is therefore recommended that an additional estimate be submitted of \$20,000.

Respectfully, sir, your obedient servant,

J. J. ABERT,

Colonel Corps Topographical Engineers.

Capt. E. L. F HARDCASTLE, Secretary Light house Board, Washington, D. C. No. 54.

San Francisco, September 30, 1853.

GENERAL: I have found it necessary to remove the light-house lately erected on Fort Point, and I await further instructions as to its re-

building.

The promontory of Fort Point consists mainly of a soft sandstone, mixed with hard boulders—the whole not too hard to be removed by picks, and requiring blasting. Extensive blasting operations have been commenced and carried on with successful results. Temporary accommodations have been constructed for a force of between sixty and eighty It will be seen from the sketch forwarded by the last mail, that nearly every ton of rock or earth removed will require two removals before the site can be prepared for the foundations of the main work. The almost inaccessible position of the promontory, especially by water, materially increases the delay and the expense. I would therefore suggest, as important to the rapid completion of the mounting of guns here, that some decision be given upon the battery projected in rear of the main work, crowning the neck of the promontory. This does not seem, from the plan, to be so connected with the body of the work as to require that the latter should be built first. Its construction is single, and I am inclined to think that it could be ready in two or three months, at furthest, to receive its armament. Some modifications might be made, from the fact that the shore extends nearly 150 feet farther into the bay than the position given by the sketch on which the plan is drawn. This, by advancing the main work, will give nearly a hundred feet additional length to the crest of the battery, and room for a corresponding number of guns.

The urgency of the instructions given to Colonel Mason for rapid prosecution of the works, and his opinion relative to this matter, many times expressed to me during his illness, has induced me to call the attention

of the department to it.

I have to request that you will cause funds to the amount of \$10,000 to be placed in the hands of such officer as may be detailed for the charge of this work. With reference to the money left by the late Col. Mason, I have to report that the requisite legal formalities are nearly completed, and the amount will be turned over to me, subject to the order of his successor. I shall have, therefore, with the draft of \$10,000 drawn, by the last mail, on Major Frazer, sufficient to meet any contingency in our operations which may arise until his arrival at this place, expected in November.

I am, General, your most obedient servant,

WM. H. C. WHITING, First Lieutenant of Engineers.

General J. G. Totten, Chief Engineer U. S., Washington.

### AS.

Statement of the cost of custom houses built or purchased by the United States, and the dates of the expenditures, at the several ports; together with the amount of appropriations for those now in the course of construction.

Kennebunk, Maine.—The custom house was purchased November 19, 1832, for the sum of \$1,575. The deed, and a letter from E. Shepley, esq, U. S. district attorney, in approval of the title, are on file in the First Comptroller's office.

Castine, Maine.—The custom-house was purchased April 6, 1853, of D. Perham. for \$800; additional site and-room purchased May 26, 1849, of inhabitants of Hancock county, for \$400. The sum of \$750 has been

expended in repairs.

The deeds, deed of cession of jurisdiction from the State of Maine, and the Attorney General's opinion in favor of the title, are on file in the First Compttoller's office.

Eastport, Maine.—The site was purchased July 3, 1917, for \$2,780.

There have been expended on the structure, \$32 509 60.

The deed, and the deed of cession of jurisdiction from the State of Maine, are on file in the First Comptroller's office.

Wiscasset, Maine.—The custom-house was purchased November 3,

1848, for \$2,000; in 1849, \$200 were expended in repairs.

The deed, deed of cession of jurisdiction from the State of Maine, and the Attorney General's opinion in favor of the title, are on file in the First Comptroller's office.

Portland, Maine.—The exchange building was purchased of the city of Portland, July 5, 1849, for \$149,000; in 1852, \$1,400 were expended

in repairs.

The deed is on file in the First Comptroller's office.

Portsmouth, N. H.—The custom-house was purchased August 21, 1817, for \$8,000.

The deed is on file in the First Comptroller's office.

Salem, Mass—The site was purchased June 23, 1818, for \$5,000. During the year 1820, \$14,271 77 were expended on the structure.

The deed is on file in the First Comptroller's office.

New Bedford, Mass.—The site was purchased April 13, 1833, for \$4,900. Previous to December 31, 1840, \$26,000 were expended on the building; and in 1850, \$840 for repairs.

The deed is on file in the First Comptroller's office.

Newburyport, Mass.—The site was purchased August 9, 1853, for \$3,000; \$20,188 40 were expended on the structure previous to December 31, 1835.

The deeds are on file in the First Comptroller's office.

Buston, Mass.—The site was purchased August 29, 1837, of the "Central Wharf" and "Long Wharf" companies, and the city of Boston, for \$190,000. The structure cost \$886,658, and the furniture \$24,452 13.

The deeds are on file in the First Comptroller's office.

Providence, R. I.—The site of the custom house and warehouse was purchased November 26, 1817, for \$3,000; since that date, \$10,395 have been expended on the building.

The copy of the deed is on file as above.

Newport, R. I.—The site was purchased September 16 and September 29, 1828, for 1,400. In 1829 the sum of \$5,600 was expended on the building.

The deeds are on file in the First Comptroller's office.

New Haven, Conn.—The custom-house and site were purchased January 2, 1818, for \$5,000. In 1820 the sum of \$2,481 88 was expended on the structure; and in 1834, \$900.

Middletown, Conn.—The site was obtained through the conveyances, the first dated February 8, 1853, consideration \$1,500; the other dated May 22, 1833, consideration \$2,000. Previous to December 31, 1836, there were expended \$12,176 64.

The deeds, and a letter of the United States district attorney approving

of the title, are on file in the First Comptroller's office.

New London, Conn.—The site was purchased February 18, 1833, for \$3,400. Previous to December 31, 1835, \$14,600 were expended on the structure; in 1840, \$1,700 were expended in repairs, and in 1843, \$637 37. A copy of the deed, with the deed of cession of jurisdiction from the State of Connecticut, are on file in First Comptroller's office.

New York city.—The site of the custom-house was purchased December 2, 1816, December 7, 1832, December 10, 1832, and January 9, 1833, for the aggregate sum of \$270,000. The structure, erected between the years 1833 and 1843, cost \$928,312 90. Copies of the title-deeds are on-file in the First Comptroller's office.

Philadelphia, Penn.—The custom house was purchased August 27, 1844, for \$225,000, "in addition to the proceeds of sale of the present custom-house." In 1846 there were expended for repairs \$31,987 82, and 1851, \$7,500. The deed, abstract, and chain of title, comprising the original title papers of this property, (better known as the United States Bank building,) are on file in the First Comptroller's office.

Erie, Penn.—The custom (formerly United States Branch bank) building was purchased July 2, 1849, for \$29,000. The deed, brief,

and chain of title, are on file in the First Comptroller's office.

Baltimore, Md.—The site of the warehouse was purchased June 10, 1833, for \$30,000. Between that date and June 30, 1845, the sum of \$241,397 was expended on the structure. The deed is on file in the First Comptroller's office.

The site of the cus om house, and the structure itself, were a part of the property of the Baltimore Exchange Company, of which the convey-

ance was executed July 6, 1817, for a consideration of \$70,000.

An addition to the custom-house was purchased of the Merchants' Exchange Company of Baltimore, November 22, 1852, for \$110,000; which sum included the cost of the site, and the amount to be paid for certain repairs to the property which have been made.

The latter deed of conveyance, and a copy of the former, are on file in First Comptroller's office, with deed of cession of jurisdiction from the State of Maryland, and Attorney General's opinion in favor of the title.

Alexandria, Va.—The custom house was purchased November 25, 1820, for \$6,000. In 1822, \$1,319 26 were expended in repairs. The deed of this property is on file in the First Comptroller's office.

At the date of the purchase of this property the State of Virginia exercised no jurisdiction over the county of Alexandria, the same being a part of the District of Columbia, and under the jurisdiction of the United

States; consequently, no deed of cession of jurisdiction was then ne-

cessary.

On the 9th July, 1846, the county of Alexandria was retroceded to Virginia, Congress reserving the right of property in the custom-house to the United States. In the Code of Virginia, (1819,) chap. 2, page 58, certain enumerated places are recognised as being subject to the jurisdiction of the United States, but this custom house is not mentioned; in short, Virginia has never, as far as ascertained, confirmed the jurisdiction of the United States over this property. The governor of Virginia has been requested to bring this omission to the attention of the legislature of that State, with a view to the passage of a law giving the United States jurisdiction over the property in question.

Wilmington, N. C.—The site purchased March 19, 1819, for \$15,000; additional site purchased May 17, 1845, for \$1,000 Previous to 30th June, 1847, \$39,000 expended on building, and in the year 1849, \$2,039 75 for furniture. Deeds on file in First Comptroller's office.

Savannah, Ga.—Site purchased December 16, 1845, for \$7,725, and July 26, 1847, \$13,000. The custom house was reported as completed July 28, 1852; previous to which, \$146,722 85 had been expended on the structure, and \$5,960 12 on the furniture. The deeds, deed of cession of jurisdiction from the State of Georgia, and other title-papers, are on file in the First Comptroller's office.

Key West, Fla —A part of the site was purchased July 26, 1833, for \$1,000. The Register of the Treasury has no minute of this expendi-

ture. The deed is on file as above.

It will be noticed that, in several of the places above referred to, the United States have not obtained deeds of cession of jurisdiction.

Statement of the appropriations for custom houses, &c., now in the course of erection under the Treasury Department, and the cost of the several sites for the same:

Bath, Me.—The amounts and dates of the appropriations for the custom-house and post office are as follow:

1850, September 30. \$2,500 1852, July 21 11,000 1853, March 3 12,000

48,000

The site was purchased February 7 and November 18, 1852, for \$15,000. The work is in progress, under a conditional contract for the excavations, foundations, and all stone and brick masonry; the building is to be constructed of granite, and completed September 1, 1856. The deeds, abstract of title, deeds of cession of jurisdiction from the State of Maine, and the opinion of the Attorney General in favor of the title, are on file in First Comptroller's office.

Bangor, Me. - Appropriations:

1850, September 30	\$50,000
1852, July 21	15,000
1853, March 3	15,000

80,000

The site was purchased June 5, 1851, for \$15,000. This work is under contract, and under the supervision of three commissioners; the foundations are nearly finished. The building is to be of granite and iron, and to be completed December 1, 1854. The deed and other title-papers, as above, are on file in First Comptroller's office.

Waidboro', Me.—The appropriation for the custom-house, post-office, and other government offices, was made August 31, 1852, and amounts to \$12,000. The site was purchased November 9, 1852, and, with incidental expenses, cost \$2,247. The deed and other title-papers are on

file as above

Wilmington, Del.—The appropriations for custom-house, post-office, and court-rooms at this port are as follows:

1852, August 31	\$25,000
1853, March 3	3.500
•	
	28,500

The site, purchased May 27, 1853, cost \$3,500. A conditional contract is made for a stone building, to be completed October 1, 1855; the foundations are now finished.

Pittsburgh, Pa.—The appropriations for the custom house, post-office,

court-rooms, &c., are as follow:

1851, 1852,	Marc July	h 3 21.	 • • •	•	••	• •	• •	•	• • •	•	••	• • • • i	• • •	• •	••	• • • •	\$75,0 35,0	00 00
																	110.0	กก

The site, purchased May 8, 1851, and September 27, 1852, cost \$41,000. This work has been built by contract, under the superintendence of an architect appointed by the department; the building, of cutstone, is nearly finished, and the lower story is ready for occupation. The deeds, &c., are on file as above.

Cincinnati, Ohio. - Appropriations for custom house and other offices:

1850, September 30	25,000
	212,745

The site was purchased September 24, 1851, for \$50,000. Conditional contracts are made for construction of this work by the 1st December, 1856, under the superintendence of an architect appointed by this department. The building is to be of stone; the foundations are completed, and the cut-stone work commenced. The deeds and other title papers are on file as above.

Louisville, Ky.—The appropriations for the custom house, post office, court rooms, and other United States offices:

1851, March 3	-	-	-	-	-	-	<b>§75,000</b>
1852, July 21		-	-	-	-	-	16,000
1853, March 3	-	-	-	-	•	•	97,745
•							
							178,745

Site purchased October 7, 1851, for \$16,000.

A contract has been made for the excavations and rubble-stone masonry of the foundations, which are nearly completed.

The deeds, &c., are on file as above.

St. Louis, Mo.—Appropriations for custom-house and other United States offices:

1850, September 30	<b>)</b>	-	-	-	-	•	<b>£</b> 50,000

1853, March 3	-	-	-	•	•"	-	324,000
							1,405,258

The site, conveyed the 27th January, 1848, by the first municipality of New Orleans to the United States, comprises the square bounded by Levee, Canal, Custom-house, and New Levee streets—a most munificent donation.

This immense work is constructed of granite; the exterior walls, which are now raised to an average height of 45 feet above the banquette, are fully backed up with brick, thus making the wall four feet thick ex-

clusive of projections. The partition walls and arches are massive and strong; and everything about the building is constructed with a view to permanence and great strength. This work is under the superintendence of a distinguished officer of the corps of United States engineers.

A notarial copy of the deed is on file as above.

San Francisco, Cal.—Appropriations for a custom house, post office and other United States offices, until the whole building is needed for custom-house purposes:

1850, September 30		-	-	•	•	-	\$100,000
1851, March 3	-	•	•	-	•	•	300,000

1853, March 3	-	•	-	-	•	-	25,000
							465,000

The site of this structure, on the block bounded by Jackson, Battery, Washington and Sansome streets, being a part of the government reserve, a part of the foundation has been piled at an expense of \$150,427 09. The further prosecution of this work is suspended until the department is satisfied in regard to the validity of the title to the site.

Astoria, Oregon.—Appropriations for a custom-house:

\$10,000	-	-	-	-	•	•	1851, March 3
30,000	-	•	•	•	-	-	1852, August 31
40,000							

It is proposed to erect the custom-house on the military reserve.

Plans and specifications for a brick building have been made, but no contract has been entered into for its construction.

### AT.

Regulations for the construction of custom-houses and other buildings.

1. The duties of this division comprise the selection and purchase of sites for all buildings under the Treasury Department; the procuring of cession of jurisdiction to the United States by the States in which the sites may be situated; the making of plans and estimates for custom-houses, mints, and marine hospitals; the general superintendence of their construction; and the collection, arrangement, and preservation of all reports, memoirs, estimates, plans, and models, relating to all buildings in charge of the Treasury Department.

2. The officer in charge of this division will, with the clerks employed therein, occupy room No. He shall, under the direction of the Secretary of the Treasury, have supervision of all agents employed in the construction of buildings for the Treasury Department, in everything relating to their official duties, and to the disbursement of moneys placed in their hands in the performance of those duties. He shall

personally inspect buildings under construction by agents of the department as often as may be deemed necessary by the Secretary of the Treasury, and report the result to him, including in his report such suggestions in relation to the affairs of the different works as he may deem expedient and proper. The report will embody full information on the following subjects: conformity of the work to the plan; its adaptation to the object for which it was intended; any alteration which may tend to the better attainment of that object; the quality of the materials used, and the character of the workmanship. The organization of the force, and administration of the affairs of the work, will be fully explained. He shall prepare and present to the Secretary of the Treasury, on or before the first of November of each year, a report of operations of the division for the year ending June 30 preceding, accompanied by an estimate of funds required for the use of each work during the current and ensuing years.

3. During the occasional absence of the officer in charge of the division, the senior clerk will attend to the duties thereof, so far as may be

convenient and practicable.

4. In this division shall be kept exact records of all official transactions of the department, comprising files of all papers received, copies of all communications sent, and records of all reports and decisions made. All plans, models, maps, deeds of sites, or copies thereof, of the several works planned and executed under the Treasury Department, must be carefully preserved.

5. Briefs will be made of all papers filed in the office, and such copious indices as will facilitate the despatch of any business requiring a refer-

ence to the files of the division.

6. No paper, drawing, model, or map, or copies of the same, will be taken from the office without the sanction of the Secretary of the

Treasury.

7. The superintendent charged with the construction of any building under the Treasury Department will be furnished from this division with plans and instructions for his guidance, and he alone will be held responsible for the faithful execution of the same. Before commencing the work, he will test the accuracy of the metes and bounds of the site; and, when satisfied on this point, he will cause them to be marked by stone, or other indestructible landmarks. He will cause the deed of title and act ceding jurisdiction to be recorded, if not already done, in the proper office of record, taking copies of each for the use of his own office. He will transmit the originals to this office, to be deposited in the Treasury Department.

S. Should there be reason to suspect the stability of the foundation of any building under his charge, the superintendent will remove all doubts by digging or boring. He will ascertain the quality and cost of the required building materials, and the facilities of procuring them in the vicinity of the work. He will endeavor to ascertain the character and responsibility of those who may propose to offer for the execution of the work, or the delivery of materials, and communicate all the information

he may obtain on the subject to the department.

9. When, in the opinion of the superintendent, at the commencement of a work, it becomes necessary to erect temporary buildings—as barracks for workmen, storehouses, offices, stables, workshops, &c.—a plan,

elevation, and sections of the proposed buildings, and an estimate of the cost, will be forwarded to the department for the decision of the Secretary. A report stating the necessity of the proposed buildings will ac-

company the plans and estimate.

10. When it is found necessary to construct wharves for the reception of materials, or for the future accommodation of the business of the custom-house or other building, all requisite plans and estimates must be transmitted to the department. Where it is practicable, permanent wharves, that may be required for future use, should be at once erected, to avoid the unnecessary expenditure of money on temporary structures.

11. At the commencement of a work, the superintendent will transmit to the department a list of all persons he may think it indispensable to employ for the most efficient and economical prosecution of the work, together with a statement of the proposed compensation of each class of services. Should it become necessary to increase the number of clerks, overseers, master mechanics, or to raise the wages of any one employed on the works, such increase will be first reported to the department, with the reasons therefor.

12. The superintendent, being responsible for the faithful and economical execution of the work in his charge, is required to inspect, or cause to be inspected, all materials delivered for the work, and to receive or reject them, as in his judgment may seem proper, taking care that none but the best be received, and that the workmanship is of the best description. He will establish rules and regulations for the government of those employed by him, and will see that they are faithfully observed. He will employ such master-mechanics, inspectors, overseers, mechanics, and laborers, as he may deem necessary, and shall have power to dismiss them.

13. No agent or other person employed on the work shall be directly or indirectly interested in any contract for labor or supplies, nor will he be permitted to here any hand, vessel, vehicle, or team of his own, or in which he has an interest, on the work on which he is himself employed.

14. Funds required for the prosecution of the work on any building being erected under the Treasury Department, will be advanced on the estimates of the superintendent, (form No. 1,) which estimates will be placed by him in the hands of the disbursing agent, to be forwarded to

the department at the commencement of each month.

15. Wherever practicable, disbursements will be made by check on the sub-treasurer of the United States in the city or town where the work is situated. The disbursing agent will render his accounts quarter-yearly—viz: March 31, June 30, September 30, and December 31—to this office, where they will be examined, and, if found correct, will be sent to the proper auditing officer of the treasury. The vouchers, abstracts, and accounts current, necessary to a prompt and correct settlement of the accounts, must be forwarded within four days after the expiration of the quarter to which they belong.

16. Any disbursing agent who shall fail to render his accounts in manner hereinbefore prescribed, will thereby become liable to dismissal

from office.

17. Explicit receipts (form No. 2) must be taken for all purchases and expenditures, except those for personal services, and must show the

nature, quantity, cost, and all other circumstances necessary to a clear

understanding of the transaction.

18. Expenditures for personal services must be exhibited on separate monthly pay rolls, (form No. 3;) and if any portion of the amount on such roll be not paid at the end of the quarter, it will be entered on a non-payment roll, (form No. 4,) and accompany each succeeding quar-

terly cash account until paid.

19. The quarterly cash papers are, an abstract in triplicate, (form No. 5;) accounts current, also in triplicate, (form No. 6;) vouchers in triplicate, (form No. 2,) for all expenditures during the quarter. Upon the abstracts will be entered the amount of each voucher and pay roll. The account current will exhibit the amount of funds on hand at the expiration of the last quarter, the amount received during the current quarter, the amount expended during the same period, and the balance at the end of the quarter. One abstract, one account current, and one set of vouchers, will be sent to the department; the duplicates of the same will be retained by the disbursing agent and the superintendent.

20. All vouchers must be signed by the person to whom the amount is due, or by some one duly authorized to sign his name and receive the money; and in the latter case the power of attorney to sign and receive should accompany the voucher. Persons who are unable to write will make their marks as signatures, which must be attested by

witnesses present when made.

21. It shall be the duty of the person in charge of this division minutely to examine all accounts transmitted by the disbursing agents under this department, with respect to prices, and the objects and character of expenditure; and to enable him to make such examination understandingly, he will be furnished by the superintendent of each work with a "price current," published in the town or city where the work is situated, or the nearest town or city to it. Should any of the accounts be found objectionable, they will be returned for explanation or correction.

22. When not otherwise directed, the superintendent may make contracts for the supply of materials, or for doing separate portions of the work. Contracts must, as far as possible, be limited to one kind of operation, or one species of supply. In all cases proposals for contracts will be invited through the newspapers, or in some other public manner, at least sixty days before the bids are opened. Bidders will be allowed to be present at the opening of the bids if they desire it. When a bid is accepted, a contract, with full specifications, will be drawn up and transmitted to the department for the decision of the Secretary of the Treasury. The contract will be accompanied by a list of all the bids,. together with such information as the superintendent may have been able to obtain as to the character and responsibility of the bidders. contract will not be binding on the United States until approved by the Secretary of the Treasury. It is not to be understood that any agent of the Treasury Department is bound to accept the lowest bid—the object of the advertisement is to invite competition. After receiving proposals, every agent will exercise a sound discretion as to accepting or rejecting even the most favorable offer received. Contracts should be drawn in triplicate—one for the department, one for the superintendent, and one for the contractor—and must be attested by two witnesses. Mere verbal

agreements for the supply of materials to any great extent should be avoided. In such cases a regular legal instrument should be executed. The superintendent will accompany each contract with his certificate, stating that the contract was given to the lowest responsible bidder, that he believes the prices to be reasonable, and that no member of Congress, or any person employed on the work, is directly or indirectly interested in the contract.

23. Contracts for services or supplies under the Treasury Department will only be made with those who are to render the one and furnish the other—namely, master-workmen and dealers; and no contract will be transferred under any circumstances, but the same must be executed by the original obligor, or, in case of his death, by his legal representative.

24. To guard against claims for extra work, care will be taken to mention in the specifications all the work that can be anticipated; but should it happen that additional stipulations are afterwards found to be necessary, new contracts covering them will be made and submitted for

the action of the Secretary of the Treasury.

25. To secure the faithful performance of contracts under the Treasury Department, the superintendent will require at least two good and sufficient sureties to each contract; and no officer, agent, or other person who is under bond to the United States, or on a bond for any other officer or agent, will be admitted as surety for the fulfilment of a contract under this department. As additional security, ten per cent. will be retained out of each payment, to be paid over to the contractor upon his completing his contract to the satisfaction of the superintendent; or, in default of his so doing, to be forfeited to the United States.

26. The superintendent having charge of the construction of a custom-house, or other building under the Treasury Department, will

keep the following books:

A" Letter book," in which will be copied all letters relating to the work.

A "Journal," containing daily records of the occupation of every

person employed on the work.

A "Book of Materials," in which will be entered, under its appropriate head, every kind of materials received, specifying kind, quantity, and cost.

An "Abstract-book," in which the "triplicate" of each set of abstracts will be kept.

A "Time-ledger," in which will be recorded daily the time made by

each individual employed.

A "Balance book," in which will be entered the amount of each appropriation made for the work, the amount remitted, and balance in treasury available for the future use of the work.

These books, with all papers, plans, models, &c., are public property,

and subject to the order of the Secretary of the Treasury.

27. The superintendent charged with the construction of a custom-house, or other public building under the Treasury Department, will, on the 30th of September of each year, make a report of the progress of the work under his charge during the year, illustrated by drawings showing the exact state of advancement of the work up to that time. The report should exhibit briefly, but clearly, every transaction connected with the work during the year. A similar report will be made

for the quarter ending the 30th September of each year, with a programme of operations for the current and ensuing year. This partial

quarterly report to be merged in the next annual report.

28. The superintendent will make, at the close of each quarter, a return of public property, (form No. 7,) exhibiting amount purchased during the quarter, amount consumed during the quarter, and quantity on hand at the expiration of the quarter.

29. The superintendent, after being notified by the department of an appropriation for the work under his charge, will submit a project of operations under the appropriation, accompanied by a detailed statement of the proposed application of the available funds, (form No. 8.)

30. The superintendent will, at the end of each month, make a report, (form No. 9,) in which will be exhibited, in tabular form, the amount of each description of work done during the month, and its cost; the amount and cost of materials, machinery, &c., purchased; the number of persons employed, and the amount of their wages; a brief explanation of the parts of the work to which the materials and labor were applied; and a cash statement showing the amount of funds on hand at the commencement of the month, the amount received during the month, the amount expended during the month, and the balance on hand at the expiration of the month.

31. The superintendent is responsible for all public property belonging to the work under his charge, and if any of it be lost or destroyed by

his neglect, he will be charged with the value thereof.

32. Whenever a superintendent, charged with the construction of any building under the Treasury Department, shall be removed from his situation, or relieved temporarily from his superintendence, he shall, as far as practicable, settle his accounts up to the time of his being relieved, and shall furnish his successor with a certified statement of all outstanding debts, a duplicate of which statement shall be forwarded to the department. He will also turn over to his successor all public property in his custody, as shown by the "quantity on hand" on the last quarterly return, and amount purchased since then. He will receive duplicate receipts from his successor for all property so turned over, one of which he will forward to the department.

33. No deviation from the original plan will be made by the superintendent until it shall have been submitted to the department, and have

received the sanction of the Secretary of the Treasury.

34. Upon the completion of a work, the superintendent will report the same as ready for final inspection, and prepare a statement of the whole cost, which, together with all the books and papers belonging to the work, and a complete set of plans, he will forward to the department.

35. All communications from this department to those subject to its orders will be promptly acknowledged, and all official communications

will be addressed to the Secretary of the Treasury's office.

36. All documents enclosed to this office should be so endorsed as to show at a glance their purport, and should be accompanied by a letter

enumerating the contents of the package.

37. Upon the completion of a custom-house, or other building under the Treasury Department, a general return of the total amount of materials, machinery, &c., &c., will be made from the aggregate of pur-

chases as shown by the column of "quantity purchased during the

quarter," on general quarterly return.

39. All reports, returns, projects and estimates, required by the foregoing regulations, will be made by the superintendent, and forwarded by him directly to this office. All vouchers for purchases and expenditures will be made out, as required in rule 19th, by the superintendent, certified by him, and sent immediately to the disbursing agent, whose duty it is to pay them promptly. The superintendent will also make out abstracts and accounts current, as required by rule 19th, two of which, at the expiration of each quarter, he will deliver to the disbursing agent, and retain the triplicate in his own office.

Memorandum of organization for progressing with the custom-house at Charleston, South Carolina.

The construction of the custom-house at Charleston, South Carolina, shall be under the direction and management of Edward B. White, as superintendent and architect, subject to the direction of the Secretary of the Treasury, and his compensation in both capacities shall be eight dollars per day. He shall appoint an assistant architect, at a compensation of five dollars per day.

It shall be the duty of the superintendent and architect to cause the Charleston custom house to be constructed upon the plan furnished him by the Department of the Treasury, with the following exceptions,

to wit:

1. The north and south porticos are to be dispensed with.

Digitized for FRASER

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis 2. The north and south walls are to be so extended as to embrace the space the porticos would have occupied.

The superintendent shall have the employment and dismissal of the following and all other employés and laborers on the work, to wit:

First overseer, who shall call the roll and keep the time of each individual on the work, and shall have the charge of such portion of the force and discharge such other duties as the superintendent shall direct, and his compensation shall be three dollars per day.

Also, a second overseer, who shall have charge of such portion of the hands and perform such other duties as the superintendent shall direct, and shall be responsible for the safe keeping of the tools, &c.; his com-

pensation shall be two dollars and fifty cents per day.

Also, a third overseer, who shall have charge of such portion of the hands and perform such other duties as the superintendent shall direct, and his compensation shall be two dollars and fifty cents per day.

Also, as many master-mechanics—to have charge of the mechanics employed—as the necessities of the work shall require, under the direction and control of the first overseer; and each master-mechanic shall receive a compensation of two dollars and fifty cents per day.

The superintendent will have the right to call to his aid, in the employment of the hands, any or all of the overseers and master-mechanics, and also require from them written reports of those who fail to discharge

the labor required of them.

He will also nominate to the Secretary of the Treasury, for his approval, a clerk to keep the books, records, and accounts of the custom-house, under the general rules and directions of the department. The compensation of the clerk will be at the rate of one thousand dollars per

year.

The collector of the port of Charleston, South Carolina, shall be commissioner of the custom-house constructing at that port, and, as such, shall be the disbursing agent of the department in paying for the labor and materials furnished for the same, all of which shall be paid on the written requisition of the superintendent; but he shall receive no compensation as commissioner except the commission allowed by law to collectors as disbursing agents. He shall, at the close of each month, furnish a written report of all moneys paid by him on the requisition of the superintendent.

The superintendent and collector shall be a board of contractors for the materials needed for the custom house at Charleston, and shall comply with all the requirements of the general directions of this depart-

ment on the subject, a copy of which will be furnished.

The superintendent will continue the monthly reports made to this department as heretofore until otherwise directed, and will regulate the

employment of persons for the custom house as herein directed.

In explanation of the change as to the north and south porticos.—The walls of the north and south porticos are to be brought forward to the rear of the columns, and the other walls extended to them, so that the space now occupied by the porticos will be embraced within the walls.

JAMES GUTHRIE,

Secretary of the Treasury.

TREASURY DEPARTMENT, August 12, 1853.

#### A V.

Statement of the amount expended upon each of the marine hospitals of the United States, including sites, structures, furniture, and repairs; together with the condition of those now in the course of crection; and an account of what evidences of title to the several sites are on file in the Treasury Department.

New Orleans, La.—The Register of the Treasury exhibits an expenditure for this work of \$123,081, between the years 1837 and 1851.

There are no title papers on file in the department.

Mobile, Ala.—The site was purchased June 20, 1848, for \$4,000. There was expended for structure, &c., between the years 1838 and 1851, the sum of \$39,140. The deed conveying the site, approved by G. W. Gayle, esq., then United States district attorney, is on file in the First Comptroller's office.

Chelsea, Mass.—The hospital was erected in the years 1836 and 1837, at a cost of \$28,100 06. There are no title papers on file in the depart-

ment.

Ocracoke, N. C.—The hospital at this port was erected in the years 1845 and 1816, at a cost, including the site, of \$8,927 07. The only title paper on file in the department is a certified copy of the act of the legislature of North Carolina, ceding to the United States jurisdiction over the site.

Key West, Fla.—The site was purchased September 10, 1833, and November 30, 1844, for the aggregate sum of \$1,500. Between the years 1844 and 1851, there was expended on the building the sum of 25,600. The title deeds, which have been submitted to the Attorney General, under the joint resolution of Congress of 11th September, 1841, and approved, are on file in the First Comptroller's office.

Pittsburg, Pa.—Site purchased September 7, 1842; cost \$10,253. There has been expended on the structure, which is nearly completed and is occupied, the sum of \$60,316 83. The deed is on file in the

First Comptroller's office.

Cleveland, Ohio.—The site was purchased October 11, 1837, for \$12,000. There has been expended on the structure the sum of \$54,972 05. The hospital is now occupied, though some of its rooms are not completed. There yet remain to be done the completion and finishing of these apartments, the grading of the grounds, the securing of the slopes (that reach the lake) from the washing of its waters, and the enclosing of the whole premises by a proper fence. The deed is on file as above.

St. Louis, Mo.—The site is a part of the arsenal property; \$54,281 25 have been expended on this work, and the same is now rapidly progressing to completion. It will be ready for occupation the coming spring.

San Francisco. Cal.—The site is on the government reserve on Rincon Point; \$47,672 93 had been expended, by the last returns. The hospital will soon be ready for occupation. The construction of a deadhouse and other offices, grading of the grounds, and the enclosing of the premises, yet remain to be done.

Louisville, Ky.—The site was purchased November 2, 1842, for \$6,000. On the structure \$41,107 10 have been expended. The hos-

pital is now occupied. It is completed, with the exception of the construction of two hot-air furnaces, and the building of suitable fences.

The title deeds are on file as above.

Paducah, Ky.—The site was purchased December 26, 1837, and cost \$1,000. There have been expended on the structure \$48,625. The hospital is now occupied. The work yet remaining to be done consists of the procuring of two copper boilers to the hot-air furnaces, the tubing connecting the same with the baths, &c., the laying of brick pavements, and the building of suitable fences, enclosing a yard of suitable size, and the completion of the grading, terraces, drains, &c. The title deed, Attorney General's approval of the same, and the act of the legislature of Kentucky consenting to the purchase of the site, are on file in the First Comproller's office.

Napoleon, Ark.—Site purchased September 15, 1837, at a cost of \$1,000. There have been expended in the structure \$53,250. There yet remains much to be done, before the building will be ready for occupation. This includes the completing of the interior finish, the hanging of the doors, painting the interior and exterior, arranging the bathing rooms, grading, terracing, and draining the grounds. The title deed is

on file as above.

Natchez, Miss.—The site purchased August 9, 1837, cost \$7,000. There have been expended \$57,250 on the structure. This is occupied, though not yet completed. That which remains to be done is mainly the construction of hot-air furnaces and heaters, the erection of force-pumps to serve as fire-engines, &c., with conduits to convey water to all parts of the building, the making of the brick pavement, and the construction of a balustrade fence, in part, in front of the hospital. The deed is on file as above.

Chicago, Itt.—The site of this hospital is a part of the military reserve. That part allotted for hospital purposes is indicated on a plat transmitted from the War Department, September 15, 1853. The hospital is occupied. The grounds require grading, and the site should be enclosed within a suitable and substantial iron fence. There have been expended on this work \$49,712.

Evansville, Ia.—The site was purchased April 29, 1853, for \$6,000; \$39,000 remain for the construction of the building, which is under contract, conditioned for its completion July 1, 1855. The deed is on

file as above.

Portland, Maine.—Congress appropriated \$30,000 for this work, August 31, 1852; and a site, known as "Martin's Point Farm," was purchased November 11, 1852, for \$11,000. This selection not being considered judicious, a second commission has been appointed to select another site. Their recommendation has not yet been acted upon. The deed is on file as above.

Norfolk, Va.—Between the years 1834 and 1849, the sum of \$9,160 01 was expended on the hospital. There are no evidences of title in this

department.

Vicksburg, Miss.—The site was purchased October, 1853, for \$4,000. The deed has been returned to Mississippi for record. The act of the legislature of Mississippi, ceding to the United States jurisdiction over the site, is on file in the First Comptroller's office.

#### AW.

#### Report of the Board of Supervising Inspectors.

BOARD OF SUPERVISING INSPECTORS, Cincinnati, November 9, 1853.

Sin: The steamboat law, which was passed on the 30th August, 1852, having now been in force for several months, the Board of Supervising Inspectors conceive that it is their duty, under the 40th section of that law, at this their first regular yearly meeting, to report to you their views and opinions of the operation of the law, together with some suggestions and recommendations of a supplementary act thereto.

With a view to prepare such report, this board, at their meeting at Pittsburg, in August last, passed a resolution requiring the local boards of inspectors to prepare and present to their supervising inspectors reports showing the amount of duty performed by each board, and "all such other general information, in regard to the operation of the

law under which they act, as may be of value or interest."

Such were very generally presented, and in compliance therewith, and upon the organization of the present meeting, were read and referred. The principal part of the following report is the result of the information thus obtained from the local boards:

#### REPORT.

We find, upon examination of the reports from the local boards, that they are not so complete in many respects as might be wished, in order to arrive at a perfectly correct statement of the results of the operation of the steamboat law; but they are of the opinion that the information therein embodied is sufficient to show that the operation of the law has been highly beneficial, and has, in a great degree, attained the object for which the law was established, viz: greater safety to the lives of passengers. In order to show what have been the nature and extent of the duties performed by the inspectors under the law, they present the following condensed statement, as obtained from the various local boards:

The following table contains an exhibit, as complete as can be made

from the reports of the local boards, ot-

1st. The number of steam-vessels to which certificates have been granted.

2d. The number of steamers reported for violating the law.

3d. The number of accidents (of such a character as to come within the cognizance of the law) that have occurred since it went into operation.

4th. The number of boilers found defective upon inspection.

5th. The number of pilots licensed.

6th. The number of engineers and assistants licensed.

7th. The number of licenses to pilots and engineers revoked.

8th. The number of pilots and engineers to whom licenses have been refused.

9th. Amount of tonnage of steam-vessels inspected.

In regard to the number of steamers reported for violation of the law, it is proper to remark, that, as a rule, no vessels were reported for a violation, unless such violation was continued after being notified of the same; so that the number thus reported falls far short of the actual Digitized forumber which have occurred.

Several masters, pilots, and engineers have been reported for violation of the law, but it is not deemed important to exhibit them in the table.

The accidents reported in the table are those against which the law was intended as a safeguard, and does not include the ordinary and trifling accidents to steamboats, such as breaking of parts of the machinery, &c., unless such accidents have resulted in loss of life.

In regard to the licensing of engineers and pilots, we would remark that it has not been the aim of the inspectors to show up in a strong manner the want of qualifications, ability, and fitness of applicants; but in most cases, when it was evident the applicant could not pass for the position for which he applied, he has been induced either to withdraw his application or accept a license for a lower grade than that for which he originally applied. This mode of proceeding will also account for the small number of licenses recorded as having been refused.

The revocations and suspensions of licenses being penalties inflicted for infractions of the law, have been made with a great degree of caution, and we believe in no case without giving the party ample notice of the charges against him, an opportunity either to disprove them, or present in defence such palliating circumstances or occurrences as should be

properly considered in fixing upon or waiving the penalty.

The column of the table showing the amount of tonnage of steamers inspected is but an approximation, but is supposed to be very nearly

correct.

In addition to the information contained in the table, we would state that, by the report of the local board at Philadelphia, there have been carried on board the thirty-two passenger steamers of that district, inspected under this law, during a running season of four months, 682,402 passengers, without any loss of life or bodily injury to any passenger.

Also, that by the report of the local inspectors of Baltimore, there have been carried by the passenger steamers of that district, inspected under the law, from the 1st June, 1853, to 1st November, 1853, 143,578 pas-

sengers, without loss of life or bodily injury to any passenger.

The above reports of the number of passengers carried by the passenger steamers of those districts were presented voluntarily by the local boards; but it is intended that hereafter, similar reports shall be generally presented.

The following are the accidents which have occurred, involving the

loss of life or property, since the law of August 30, 1852:

In the first supervising district.—The steamer "Empire State," in April last, while on her passage from New York to Fall River, collapsed a flue in her larboard boiler. The boat sustained no damage, nor was any person injured. At the time of this accident the boat had not been in-

spected.

The steamer "Ocean," on the night of the 28th June last, was run upon a ledge of rocks off Cape Ann, called the Londoner. The cause of the accident was investigated, by which it was shown that it did not occur through any carelessness or negligence on the part of the pilot, but from a peculiar brilliancy of the Thutcher's Island light, by which the pilot was deceived in regard to his correct distance from that light; no loss of life or injury to passengers resulted therefrom.

The steamer "Bay State," on the 19th September last, while on her passage from Fall River to New York broke her crank-pin, where in-

serted in the driving crank, which resulted in the breaking of the cylinder head, and permitting the escape of steam into the stateroom cabin. Fortunately there were no passengers in the saloon of this cabin, it occurring between three and four o'clock a. m.; but several of the stateroom doors were thrown open by the passengers occupying the rooms, thereby exposing themselves to the steam thus escaping into the cabin. Five of these passengers, occupying staterooms immediately alongside of the engine, lost their lives in thus opening their staterooms. We conceive that no blame can be attached to the engineers of this boat on account of this accident, as it was shown, upon inquiry, that but a few days previous to the accident the connecting-rod had been detached, and the crank pin carefully examined, and no signs of weakness or fracture were discovered. The conduct of the officers at the time of the accident is to be highly commended, as it was only through their coolness and judgment that a much larger loss of life did not result.

Second supervising district.—The steamer "New World," on the morning of the 1st of July last, whilst lying at the wharf in the city of New York, and but a few minutes previous to the time of starting on her passage to Albany, collapsed at the same instant four of the main flues to the outside furnace of the port boiler, resulting in the loss of the lives of eight persons, all of them firemen, and other hands belonging to the

boat.

The accident was very thoroughly investigated and reported upon fully to the collector of the port. The principal results arrived at were, that the accident was caused by an excessive pressure of steam, which excessive pressure gradually accumulating, was unknown to the firemen on account of a derangement of the steam-gauges, whereby they indicated a pressure several pounds less than that actually upon the boilers.

The license of the chief engineer was revoked, and that of the assistant suspended. The penalties inflicted would have been much more severe, but for the fact that at the time of the accident the boat had not

been inspected according to the law.

In this district two collisions with sailing-vessels have occurred, involving loss of life; in both cases it appeared most satisfactorily that the fault occasioning the collisions was entirely with those managing

the sailing-vessels.

In this district three steamboats have been on fire dangerously, and one slightly. In the first three cases the fires were extinguished by the prompt use of the fire-pumps provided in conformity with the provisions of the law, and in one instance the lives of all on board were probably thereby saved; in the other case mentioned, the fire was extinguished by the use of the fire-buckets provided.

The steamship "Cherokee" was burned in the night, at her wharf in the city of New York; the cause of the fire remains undiscovered; no

loss of life resulted.

The steamer "Albatross," licensed at New York, was lost on a coral reef in the Gulf of Mexico, but there was no loss of life to either passen-

ger or crew.

The lives of three passengers have been saved by the life-preservers provided by law; in all these cases the passengers fell overboard, the life-preserver in one instance falling over at the same time, and in the other cases being thrown over by persons on board the vessel.

Third supervising district.—The steamer "Columbia" was mn

ashore in a fog; no loss of life resulted.

The steamer "Cambridge" was burned in Rappahannock river about the middle of September last; a thorough investigation was instituted, but no satisfactory conclusion arrived at as to the cause of the fire. There was no loss of life by the disaster, and great credit is due, according to the testimony of the passengers, to both officers and crew of this vessel, for their coolness, and the manner in which they succeeded in saving the passengers and their luggage after all hope of saving the vessel was gone. It is worthy of remark, in regard to this disaster, that the engineer, in giving his testimony, states as his deliberate and decided opinion, that had there been a pipe for discharging steam in the hold of the vessel, as recommended by the board of supervising inspect ors, the fire could have been immediately extinguished when first discovered.

Fourth supervising district.—A collision occurred between the steamer "Swallow" and the steamer "Howard," by which the steamer "Swallow" was sunk. Neither boat had been inspected under the law. On account of the early period at which this accident occurred, before the board were properly organized, no investigation was had in the case.

The passenger steamer "Southern Belle" came in collision with the freight steamer "Daniel Boone," by which the Daniel Boone was sunk; no loss of life resulted. A careful investigation was had into the cause of this accident, and it being evident, from the testimony in the case, that it was the result of negligence or carelessness on the part of the pilots of both steamers, the licenses of those of the "Southern Belle" and "Daniel Boone" were revoked.

There have also been three collisions in this district, by which, however, no loss of life occurred. These cases were investigated, and the pilots suspended. No report has been received in regard to the accidents

in California, there having been no inspectors appointed.

Fifth supervising district.—In this district six steamers have been burned at the levee in St. Louis, but there was no loss of life. As these cases did not come properly within the cognizance of the inspectors, no investigation was instituted.

There have also been two collisions in this district; no loss of life was occasioned in either case. In one case the pilot of the boat complained of was ascertained to have no license, and a prosecution has been commenced against him, under the law, for acting as a pilot without a license.

In the other case it was found, upon investigation, that the accident resulted from no carelessness or negligence on the part of the pilots, but from their losing control of the steerage of one of the boats on account of her proximity to a bar.

There has also been a boat sunk in coming in contact with some ob struction in a newly cut channel. By this accident the lives of three of

the crew were lost.

Nixth supervising district.—No accident involving the loss of life occurred in this district, to any steamboat inspected under the law.

Seventh supervising district.—In this district there has been no ac-

cident by which loss of life has occurred to any passenger.

The steamer "Buckeye State," on the 15th May last, bursted a steamer pipe, by which one of the crew lost his life. This boat had not been

inspected under the law. If the hydrostatic test, required by the law, had been applied, the defect in this pipe would undoubtedly have been discovered, and the accident prevented.

The steamer "Memphis No. 2" was lost in February last by being run ashore. The case was investigated, and it was ascertained to have been caused by the carelessness of the pilot; his license was therefore revoked.

There have also occurred in this district four collisions; no loss of life resulted. The cases were all investigated. In each case one or more of the pilots were suspended. In one of these cases the pilot was so acting without a license. Upon its being investigated, and this fact appearing, the penalty of \$100 for the offence was inflicted; which was

paid to the inspectors, and by them paid over to the collector.

There have been three steamers burned in this district, at the wharf, while dismantled and laid up. It is worthy of remark, that a freight steamer in this district, while being loaded for her voyage, was visited by the inspectors, and, after examination, they notified the officers that the boat was unsafe, on account of her liability to take fire from improper arrangements about the boilers. The officers paid no attention to the caution, and the boat proceeded on her voyage, and in about eight or ten hours from the time of leaving port she took fire, and was entirely consumed.

Eighth supervising district.—In this district no loss of life has occur-

red to any boat inspected under the law.

The passenger steamer "Buffalo," in the month of May last, came in collision with the government steamer "Michigan." No lives were, however, lost thereby. An investigation was held, and it being conclusively shown that it resulted from no carelessness or negligence on the

part of the pilots of the "Buffalo," no penalties were imposed.

We would, however, remark, as an evidence of the importance of the present steamboat law, that one of the local boards of this district was called upon to inspect a steamer: they did so, but refused to grant a certificate, as they considered her quite unsafe. The master then requested a permit to go to another port to repair. The inspectors refused to grant such permit to run as a passenger steamer. The master then stated that he would go to another port without passengers. The vessel started on her voyage for that purpose, and within about forty eight hours from the time of leaving, the boiler blew up, the vessel sunk, and was a total loss. By this disaster several lives were lost, but the exact number is not known.

Ninth supervising district.—In this there have been two collisions between steamers. The first case was that of the steamer "St. Lawrence" and the steamer "Queen City"—both passenger steamers. By this accident there was no loss of life or injury to any person. Testimony has been taken in the case, but no decision has yet been arrived at.

The second case was that between the passenger steamer "Louisiana" and the freight propeller-steamer "Detroit." No loss of life or injury to any person resulted from this collision. This case is now under

investigation.

The steamer "Mississippi," on the evening of the 17th August last, had a collapse of one of the flues of the centre boilers, which resulted in the loss of the life of one of the coal-heavers. This case was investigated, and it was decided that the accident was caused by a defect in

the iron of which the flue was constructed, and which was not visible

at the time the boiler was inspected.

This boiler had been previously tested by hydrostatic pressure, and it was conclusively shown, by the testimony of the witnesses, that the pressure of steam at the time of the accident was several pounds less than permitted by the certificate. The board therefore adjudged that no fault was to be attributed to the engineers; consequently no penalty was imposed.

Were we in possession of, or had we access to, proper statistics, we would wish to present a view of the loss of life and property for the few months that the law has been in operation, in comparison with the previous five or ten years; but being unable to do this, we present the following comparison, showing the beneficial effects of the law upon the western waters, as furnished to us by a member of one of the local

boards of that section. He says:

"In thirteen months—from the 11th day of December, 1849, to the 11th day of January, 1851, which was about the time that elapsed between the explosion of the steamers 'Louisiana' and 'Knoxville,' both of which occurred at the wharf at New Orleans—no less than fifteen explosions took place on the western and southern rivers, killing three hundred persons, and destroying property to the amount of \$200,000. From the 11th day of January, 1851, to the 30th day of August, 1852—which is a little less than nineteen months' time—nineteen explosions occurred on the western and southern rivers, killing three hundred and ninety persons, and destroying property to the amount of \$578,000.

"The present steamboat law passed on the 30th August, 1852, but did not go into effect (upon the western and southern rivers) until the 1st of January, 1853. Two boats have exploded since the 1st of January the 'Bea,' on the Ohio river near Evansville, by which three persons were killed, and property damaged to the amount of \$1,000; and the 'Farmer,' on Galveston bay, by which some thirty five persons were lost, and the boat sunk immediately—a total loss, amounting to about These two boats exploded soon after the law went into effect, but neither of them (the 'Bee' was a freight boat; so was the steamer Buckeye Belle,' which exploded, on the Muskingum river, after the law passed, but before it went into effect, by which thirty-three persons were killed, and property destroyed to the amount of \$3,000) had been fitted out in accordance with the requirements of the law. boilers had not been subjected to the hydrostatic test, nor were they supplied with the alloy, steam gauges, water-gauges, &c. I feel confident, had these three boats been inspected as required by the law, no explosion would have taken place; for not a single boat, up to this time, has exploded on the rivers emptying into the Gulf of Mexico and their tributaries, that had been inspected according to the law. In the fourteen months since the passage of the law, (including the four months that intervened between its passage and the time of its going into effect,) only three explosions have occurred, which is an average of a little more than one explosion in five months; while for the thirty-two months preceding its passage, thirty-four explosions occurred—an average of over one a month. The average loss of life for the same period previous to the passage of the law, was about twenty-one persons per month; while the average per month since the passage of the law is but five persons.

"Again: the average loss of property for the thirty two months preceding the passage of the law, was about \$30,000 per month; while the average loss of property for the fourteen months since the passage of the law is about \$2,000 per month."

These comparisons show most clearly that for some reason there has been, since the passage of the law, great additional security on board passenger steamers to life and property. Whether this is to be attributed solely to the operation of the law, or to fortuitous circumstances, we will not express an opinion, but leave each one to judge for himself,

#### The general operation of the law.

It has been our desire to ascertain, as far as possible, the benefits resulting from the passage of the law of August 30, 1852, and the opinions

of persons connected with steamboats and their operations.

When the law first went into effect it met great opposition, not only from many persons interested as owners in steamboats, but also from many of the engineers and pilots—persons who are, in our opinion, more highly benefited, in a pecuniary and social point of view, than any others, as the effect must be not only to maintain a high rate of wages to those holding licenses under the law, but also to elevate materially their social position. This opposition to the law has decreased rapidly, and many of those formerly arrayed in the ranks of its enemies are now numbered among its strongest friends.

It is also worthy of note, that it is found that insurance companies are far more ready to take risks upon those steamers which have been in-

spected under the law than upon others.

The beneficial effects of the law are also shown in the returning confidence of the travelling public in this mode of conveyance. Finally, we would state, as our unanimous opinion, that the greater the experience had in the operation of the law, the greater will become the number of its friends, and the less the opposition to its enforcement; and not only so, but the wisdom of Congress in enacting this law will become more and more apparent.

We do not by this mean to assert that the law is perfect in all its provisions and enactments; on the contrary, we have found many difficulties in carrying it out, that in our opinion may, by some further legislation, be either partially or wholly removed. Our views upon this point will be found more in detail in a subsequent part of this report.

As confirming the views we have expressed in regard to the general operation of the law, we would quote the following extracts from the

reports of several of the local boards.

In one of the reports, the inspectors speak of the disposition of owners and masters readily to comply with all the requirements of the law. Another says: As regards the operation of the law in this district, it has not been and cannot be otherwise than salutary. The undersigned have met with some little opposition in the performance of duty; but, as a general thing, are happy to state that we have been met by the owners and officers of steamers with kindness, and a determination to carry out the spirit of the law. We are also convinced that when the public are more acquainted with the additional security to the lives of passengers on steam-vessels, in case of accident by fire, steam and water, governed

ΖU

by the enforcement of the law, its popularity and permanence would be at once established. We also think that the system of licensing engineers and pilets has had its good effect in stimulating a laudable ambition to perfect themselves in a knowledge of their business, and have no doubt but that in future examinations the improvement will be manifest.

The inspectors in another district, where there is much travel by steamboats, report the good effects of the operation of the law; they state that boilers and engines are now kept in better order than formerly, and that inquiry is awakened among engineers, and that both they and pilots have become sensible of the great responsibility resting upon them. The opposition to the law has in a great degree settled down, and it is becoming more popular with those who understand its features; and it is only necessary for the travelling community to know the safeguards that have been thrown around them, and all opposition will cease.

The law has worked well, and given general satisfaction in this district. The only thing we have to regret is, that ferry-boats do not come under the law. We have observed much want of caution in their management, and feel convinced that the community have more to fear from explosions of boilers in such boats, than in passenger boats, under the law. We take great pleasure in testifying to the good effects of the law, not only in being the means of avoiding accidents to steamers, but also in its effects upon that class of men who come under its immediate operation, by raising them in the estimation of the public as well as in their own.

Another board reports: There have been twenty-one steamboats built and finished in this district since the first of January last. These steamboats have given entire satisfaction. The captains and engineers (many of whom were opposed to the standard of steam) have given information that their boats perform well, and do more work, with the same amount of fuel, than under similar circumstances with boats before the passage of the law. There has been considerable opposition to the law in this district in general, and particularly to the standard of steam. This opposition is fast wearing away. The working of the act of 30th August, 1852, has demonstrated the value and utility of the law; hence the change now taking place in the views of owners and captains of steamboats.

We would further state, in conclusion, that at the time the law went into effect, there were very few who entertained a favorable opinion of it—believing it impracticable; but, as the season advanced, those most opposed to the law at its commencement came forward and expressed warmly their approbation of its success; that at this time it is fast gaining the confidence of the travelling community, and that the present law will meet their wants. We would further state that the insurance companies have taken a deep interest in the carrying out of the law according to its true intent and spirit; they went so far as to call a meeting, and passed resolutions to use their influence in favor of such vessels as have been equipped according to the law.

Several of the local boards have expressed the opinion that some further legislation is required, in order that the full benefits of the law may be attained. A report from one of the local boards represents that

many complaints have been made by the pilots and masters of passenger steamers running on the rivers and bays, where there are many sailing-vessels, flat-boats, and rafts; that they have great difficulty in avoiding collisions with the same, in consequence of their showing no lights, by which their course or position may be determined. This difficulty could be avoided by a resolution of Congress compelling all such sailvessels, &c., to carry a light in one or more conspicuous places; those at anchor to show their light in a manner different from those under way.

Another board in their report also recommended that a proper system of lights be adopted for sailing-vessels, in order to avoid collisions upon

bays and rivers.

Another board says that complaints are made by masters and pilots of passenger steamers that freight steamers and tow boats do not carry lights, in compliance with the law for passenger steamers, and they

urge that steps be taken to bring them under the same law.

In addition to the above, from the local boards, we would state that very serious complaints have been made to us of the great difficulty that the pilots of passenger steamers frequently have to avoid collisions with freight steamers and tow-boats, on account of the utter indifference on the part of the unlicensed pilots of those steamers, as they are not amenable to the law. Not only so, but cases have been reported where these unlicensed pilots have evidently endeavored to annoy the licensed pilots in every possible way. In consequence of these difficulties, licensed engineers and pilots have urged in the strongest manner that the pilots and engineers of freight boats, tow-boats, and all other steam vessels, be required to take out licenses under the law.

## Suggestions in regard to a supplementary act.

1. We would suggest the propriety of Congress authorizing the appointment of a supervising inspector for the Pacific, and the establishment of a local board of inspectors at Oregon; and would briefly state, among other reasons for making the suggestion, the large amount of duties required of the supervising inspector of the tourth district, and the remote point requiring the attention of a supervising inspector on the Pacific, must necessarily lead to a neglect of duties on that coast, or the Mississippi and other parts of the fourth district; and, in addition, the increasing steam marine on the Pacific demands the entire attention of a supervising inspector, and local boards both at Oregon and San Francisco, as advised.

2. We would recommend the passage of a supplementary act, whereby that portion of steamers styled (in the 42d section of act relating to steamboats, approved August 30, 1852) ferry-boats, freight-boats, tugboats, and towing boats, and steamers not exceeding 150 tons, and used, in whole or in part, in navigating canals, now exempt from inspection under the law of 1852, but subject to inspection under act of 1838, may be included in the provisions of the law of 1852, so far that they be required to have their boilers, machinery, and hull inspected as other steamers, and in all cases be required to carry a licensed engineer, and a licensed pilot. And we would further state, that we cannot see the pro-

priety of the existence of two local boards for the inspection of steamers, as is now recognised by law; and should the foregoing be adopted by Congress, there would be but one board for all classes of steamers.

Should the honorable Secretary approve, and Congress pass or adopt a supplementary act, as recommended, to the law, we would suggest that such steamers pay, as other steamers are required to pay, for inspection, a proportionate fee according to their tonnage—say one-half the amount now paid by steamers carrying passengers; and as, under this arrangement, the duties of the local boards in some parts of the United States will be largely increased, and the receipt for the performance of such duties (beyond what is now received) will be paid into the treasury of the United States, it is believed it will more than meet the additional increase of pay which we recommend to the following local boards at the ports designated:

Proposed compensation to local boards at various ports, if required to inspect steamers now exempt under the 42d section.

	-	•				
					Amount now received.	Amount wanted.
1st district.	-Portland board	-		-	\$300	\$500

	Burlington board	•		-	300	<i>5</i> 00
	-					

And should the honorable Secretary of the Treasury deem it unnecessary to call the attention of Congress to the proposed change, you will allow us to urge upon your attention the following increased sataries to local boards, where it is found in some cases so small as to render it impossible to obtain or retain competent persons to discharge the duties

required; and in case the law is not altered, we would ask the following increase to the boards designated:

				Amount now received.	Amount wanted.
Portland board	-	-	-	\$300	\$400
New London board		•		300	<sup>"</sup> 500
New York board, a clerk	-	-	-	-	800
Baltimore board, a clerk	-	-	-		300
Philadelphia board, a clerk	-	•			300

Nashville board	-	_		400	500
Oswego board		-		300	400
Burlington board -	-	-	-	300	500

3. We would call attention to the importance of requesting Congress to pass a law, for the more safe and successful navigation of lakes, bays, and rivers by steamers, compelling all sail-vessels, including freight steamers and tow-boats, also flat-boats and rafts, to carry lights under certain restrictions and penalties, as it is known that the absence of such a law has caused loss of life and the destruction of property by collision, which might have been avoided had lights been carried on the vessels, &c., referred to.

4. We would also suggest, that, much difficulty having been experienced in administering the oaths to the boards of inspectors, as required by the law, should a supplement to the act be passed, it be made the duty of the collector, deputy collector, or other chief officer of the customs in each district, to administer the oaths to inspectors when

required.

With the hope that this report, with the suggestions and recommendations therein contained, will meet your approval,

We remain, sir, yours very respectfully,

JOHN SHALLCROSS,

President.

JOHN S. BROWN,

Secretary to Board of Supervising Inspectors.

Hon. James Guthrie, Secretary of the Treasury.

#### AX.

T. BIGGER, Register.

TREASURY DEPARTMENT, Register's Office, November 1, 1853.

#### AZ.

#### CIRCULARS ISSUED TO COLLECTORS SINCE MARCH 4, 1853.

TREASURY DEPARTMENT, March 8, 1853.

Sin: Circular (new series) No. 74, issued from this department under date of 2d instant, is hereby countermanded, and you will take no steps under it in the form of payments, credits, or the preparation of statements, without further instructions upon the subject.

I am, very respectfully,

JAMES GUTHRIE, Secretary of the Treasury.

General regulations in respect to the act of Congress of August 30, 1852, relating to stramboats.

TREASURY DEPARTMENT,
May 10, 1853.

The salary of each supervising inspector will be sent to him at the close of each quarter, without his rendering a special account to the Treasury Department. The date of the oath of each of these officers should be reported to the Secretary of the Treasury, with a statement of the place to which the drafts for the payment of his salary are to be sent. Notice should be given before the close of the quarter of any change of locality.

Ten cents a mile will be allowed for travelling expenses in lieu of all

cha ges in detail.

The form of account for such expenses will be as follows:

United States to A. B., supervising inspector, Dr.

District No. ———. For travelling expenses from (naming the principal port of the district,) to (naming the place of destination,) commencing on the ——— day of ———, and ending on the ——— day of ———.

Number of miles at ten cents a mile \_\_\_\_\_.

In returning, give a proper description of the route back, inserting the dates, and carrying out the amount as above. If the travel is by land,

the route should be designated.

For the expense of transporting from place to place the instruments used in inspection, the inspector who incurs the expense should take a receipt from the person employed, stating the kind of instrument transported, from whence taken, and where delivered.

For other incidental expenses the inspector will also take receipts.

These expenses will be included in the inspector's account-current,

accompanied by the receipt, or receipts, as vouchers.

Accounts for all such expenses should be sent to the Secretary of the Treasury at the close of each quarter; and the law requires that they be rendered under oath.

If both kind of expenses should be charged in the same account, the oath may be as follows:

State of \_\_\_\_\_\_, ss. \_\_\_\_\_\_, 185 .

I, A B, supervising inspector for district No. ——, do solemnly swear (or affirm) that the travelling was necessary in the performance of my duty, and when away from ——, the principal port in my district; and that I actually paid for the transportation of instruments, and for other incidental expenses, as charged, and that the same is reasonable.

If only one kind of expense enters into an account, the part of the

oath that applies to that expense alone will be taken.

The oath may be administered by an officer of the United States, or of the proper State or Territory authorized to administer an oath, or by a collector, or surveyor of customs acting as collector. If by a magistrate of a State or Territory, his authority to administer an oath must be verified by a clerk of a court of record.

An inspector is not to draw negotiable drafts on the department. When an account shall be settled, the money will be paid or sent

according to written instructions.

In cases in which a local board of inspectors shall neglect its duty, the supervising inspector will immediately report the facts in writing, to the Secretary of the Treasury, in order that the delinquent may be

removed, according to section 20 of the act.

By the same section it is enacted, that whenever a supervising n-spector ascertains to his satisfaction that the master, engineer, pilot, or owner of any vessel, fails to perform his duties, he shall, if need be, cause the negligent or offending party to be prosecuted. In such instances the inspector will report the facts to the United States district attorney, and he will take the proper steps according to the nature of the case.

The thirtieth section provides that each local inspector shall be allowed annually a certain compensation, "to be paid under the direction of the Secretary of the Treasury, in the manner the officers of the revenue are paid." But this provision, so far as respects mode of payment, is regarded as superseded by those clauses in the deficiency and civil and diplomatic appropriation bills of the last session of Congress, in which certain sums are appropriated "for salaries of nine supervising and fifty local inspectors, with travelling and other incidental expenses incurred by them." The salaries and expenses of the local inspectors will therefore be paid quarterly at the treasury, as those of the supervising inspectors are paid.

The form of rendering accounts, and of proving them, will be the same with the local as with the supervising inspectors; and they will be allowed the like compensation for expenses of travel. Their accounts for salaries will be stated by the First Auditor at the close of each quarter, and, unless otherwise directed, drafts will be remitted to them

to pay the respective sums found due.

Each local inspector should inform the First Auditor of the place of his residence; and if any change takes place therein, give due notice before the end of the quarter.

When an inspector makes a charge for travelling expenses, he should

give the number and names of the steamboats inspected at each place

by him visited.

The costs of stationery, boxes for instruments, and other contingencies, are embraced under the head of "other expenses." The articles purchased must be specified, and the bills or accounts must be duly receipted and presented as vouchers.

All expenses of local inspectors other than those incurred for travel and transportation of instruments, should be approved by the collector, or

other chief officer of customs.

The local inspectors will apply to the collector or surveyor, as the case may be, for a place within his custom-house, or other public building, in which to deposit their instruments and transact their business. They will not be allowed for the rent of rooms, unless previous authority has been granted them by the Treasury Department to incur such expense.

For the "fusible alloy" the inspectors will charge the owners of steamboats one dollar a pound—a price which will about cover its cost to

the government.

All fees and other moneys which the inspectors may receive on public account, they will pay over to the collector, or other chief officer of customs, at the close of each month, taking duplicate receipts therefor, one of which is to be transmitted to the First Auditor of the Treasury.

The collector, or other chief officer of customs, will, at the end of each quarter, render with his general account a distinct account—first, of the sums which are paid to him under the thirty-first section of the law, and also of all sums paid to him by supervising and local inspectors on account of receipts under the law; and, secondly, of expenditures under the ninth section, as hereinafter provided; and the balance he will pay over as other public money.

Out of this revenue he will, in the cases of investigation provided for in the 13th article of the 9th section, pay the witnesses that may be summoned for their actual travel and expenses, as set forth in that

article.

In addition, it is made the special duty of the collector or other chief officer of customs—

1st. Not to issue any license, register, or enrolment, or other paper, to any vessel propelled in whole or in part by steam, and carrying passengers, till he shall have satisfactory evidence that all the provisions of the act are fully complied with. A certificate from the board of inspectors of the character of that set forth in the 4th article of the 9th section will be necessary, and also a payment of the fees provided for in section 31, before any license, register, enrolment, or other paper, can be issued to any such steam-vessel.

2d. It is the duty of the collector, or chief officer of the customs, at each of the twenty-five designated ports, to require from the board of inspectors a prompt report of all their doings, as provided for in article

14 of section 9.

3d. It is the duty of the collector, or other chief officer of customs, of each of the twenty-five designated ports, to give to the others the information called for by the 23d section. He will also give to each supervising or local inspector the like information when solicited.

4th. It is the duty of the collector, or other chief officer of the customs, as provided in section 24, as well as of the inspectors, to enforce the

provisions of the law.

, 5th. The collector, or other chief officer of customs, will, agreeably to section 25, file all original certificates of the inspectors required by this act to be delivered to him, and give to the master or owner of the vessel therein named two certified copies of such certificate.

6th. The collectors will require from the inspectors at the close of each month the payment over to them of all fees or other moneys received by them, together with a list of all pilots and engineers to whom licenses have been granted or renewed during the month.

For further particulars the collectors and inspectors are referred to the law, most of the provisions of which are so explicit as to require no explanation. It is a law of such a character, that only by the joint action of the supervising and local inspectors, and the collectors of customs, can it be properly carried into execution; and on them, therefore, in the first instance, must the responsibility devolve.

Rigid economy will be necessary. The balance of the appropriation, after deducting the amount for salaries, is very limited, and will be exhausted before the end of the year if charged with unnecessary

expenses.

JAMES GUTHRIE, Secretary of the Treasury.

General instructions to collectors and other officers of the customs, under the art of 26th June, 1848.—To prevent the importation of adulterated drugs and medicines.

TREASURY DEPARTMENT,

June 4, 1853.

It being represented to this department that much embarrassment has been experienced by officers of the customs at some of the ports of the United States, in reference to the provisions of the act of 26th June, 1848, "to prevent the importation of adulterated and spurious drugs and medicines," it is deemed expedient, with a view to avoid future difficulties arising from misconstructions of the law, and to secure uniformity of practice at the several ports in carrying out its provisions with precision and efficiency, to furnish you with the additional instructions which follow, explanatory and in modification of the circular instructions addressed to you by the department on the Sth July, 1848.

To avoid the recurrence of a difference of opinion between the officers of the customs as to what particular articles of commerce should be considered drugs and medicines, and as such subject to special examination by the special examiner of drugs and medicines, it is thought proper to state that, in conformity with the evident spirit and intent of the law, it is required that all articles of merchandise used wholly or in part as medicine, and found described as such in the standard works specially referred to in the act, must be considered drugs and medicines; and that all invoices, therefore, of such articles, in whole or in part, must be submitted

to the examination of the special examiner of drugs and medicines, before they can be permitted to pass the custom-house.

In the examination on entry of any medicinal preparation, the said

special examiner is to unite with the appraiser.

With a view to afford a reliable guide to the examiner of drugs and medicines, as well as to the analytical chemist, on appeal, in ascertaining the admissibility of such articles under the provisions of law, founded on their purity and strength, the following list is given of some of the principal articles, with the result of special tests agreeing with the standard authorities referred to in the law, all of which articles are to be entitled to entry when ascertained by analysis to be composed as noted, viz:

Aloes, when affording 80 per cent. of pure aloetic extractive. Assasætida, when affording 50 per cent. of its peculiar bitter resin.

Do do 3 per cent. of volatile oil.

Bark, Cinchona, when affording 1 per cent. of pure quinine, whether called Peruvian, Calasaya, Arica, Carthagena, Maracaibo, Santa Martha,

Bogota; or under whatever name, or from whatever place; or

Bark, Cinchona, when affording 2 per cent. of the several natural alkaloids combined, as quinine, cinchonine, quinidine, aricene, &c., the barks of such strength being admissible as safe and proper for medicine and useful for chemical manufacturing purposes.

Benzoin, when affording 80 per cent. of resin.

Do do 12 per cent. of benzoic acid. Colocynth, when affording 12 per cent. of colocynthin. Elaterium, when affording 30 per cent. of elaterin.

Galbanum, when affording 60 per cent. of resin.

Do do 19 per cent. of gum.

Do do 19 per cent. of gum.
Do do 6 per cent. of volatile oil.

Gamboge do 70 per cent. of pure gamboge resin.

Do do 20 per cent. of gum.

Guaiacum do Si) per cent. of pure guaiac resin.

Gum ammoniac, when affording 70 per cent. of resin.
Do do 18 per cent. of gum.

Jalap, when affording 11 per cent. of pure jalap resin, whether in root or in powder.

Manna, when affording 37 per cent. of pure mannite.

Myrrh do 30 per cent. of pure myrrh resi

Myrrh do 30 per cent. of pure myrrh resin-Myrrh do 50 per cent. of gum.

Opium do 9 per cent, of pure morphine.

Rhubarb do 40 per cent. of soluble matter, whether in root or powder; none admissible but the article known as East India, Turkey, or Russian rhubarb.

Sagapenum, 50 per cent of resin.

Do 30 per cent. of gum.

Do 3 per cent. of volatil

Do 3 per cent. of volatile oil. Scammony, 70 per cent. of pure scammony resin.

Senna, 28 per cent. of soluble matter.

All medicinal leaves, flowers, barks, roots, extracts, &c., not herein specified, must be when imported in perfect condition, and of as recent collection and preparation as practicable.

All pharmaceutical and chemical preparations, whether crystalized or otherwise, used in medicine, must be found on examination to be pur,

and of proper consistence and strength, as well as of perfect manufacture, conformably with the formulas contained in the standard authorities named in the act; and must in no instance contain over three per cent. of excess of moisture or water of crystalization.

Essential or volatile oils, as well as expressed oils, used in medicine, must be pure, and conform to the standards of specific gravity noted and

declared in the dispensatories mentioned in the act.

"Patent or secret medicines" are by law subject to the same examination and disposition after examination as other medicinal preparations, and cannot be permitted to pass the custom-house for consumption, but must be rejected and condemned, unless the special examiner be satisfied, after due investigation, that they are fit and safe to be used for medicinal purposes.

The appeal from the report of the special examiner of drugs and medicines provided for in the act, must be made by the owner or consignee within ten days after the said report; and in case of such appeal, the analysis made by the analytical chemist is expected to be full and in detail; setting forth clearly and accurately the name, quantity, and quality of the several component parts of the article in question; to be reported

to the collector under oath or affirmation.

On such report being made, a copy of the same will be immediately furnished by the collector to the special examiner of drugs and medicines, who, if the report be in conflict with his return made to the collector, and he have cause to believe that the appeal and analytical examination have not been conducted in strict conformity with the law, may enter his protest, in writing, against the reception and adoption by the collector of such report and analysis, until a reasonable time be allowed him for the preparation of his views in the case, and their submission to this department for its consideration.

JAMES GUTHRIE,

Secretary of the Treasury.

Treasury Department,

June 14, 1853.

Sir: It has been represented to the department that merchandise is often, and to a considerable extent, clandestinely introduced from Canada into the frontier districts of the United States without payment of duties. It is expected, of course, that every proper effort will be made by officers charged with the execution of the laws, and the protection of the public revenue, to put an end to such a state of things, not only because the United States are defrauded of just dues, but because a positive wrong is thereby inflicted on every citizen who contributes to the treasury by the honest payment of duties. But whether the amount of which the treasury is thus defrauded be more or less, in either case it tends to debase the moral sentiment of the community, by weakening that sense of obligation to respect and obey the laws so necessary to the proper a tion, and even existence, of free institutions.

After a very careful inquiry into the measures most likely to repress these fraudulent evasions of the revenue laws, it has occurred to this department that the most effectual would be to call in aid that very sense of legal obligation and patriotic regard for the interests of the community which the efforts of thoughtless or misguided men are so strongly

tending to extinguish.

State and municipal authorities rely, to a very great extent, on the efforts of well-disposed citizens to aid in the detection and punishment of offences against the peace and welfare of the community; and may not the United States also rely on the same class of citizens to aid the legal authorities in detecting and repressing attempted frauds on the public revenue?

The revenue and collection laws of the United States contemplate such aid, and grant a liberal share of the proceeds of forfeitures to the informer by whose agency the offence has been detected and disclosed

to the legal authorities.

Trustworthy persons who are engaged in business near the routes by which merchandise would be likely to be cland stinely introduced into the United States—such as those residing near to or superintending ferries, bridges, living near highways and thoroughfares, or connecting with railways; municipal and State officers, whose duties would be likely to give them access, by a little effort, to information of such breaches of law. Persons of this description might, if their attention should be properly called to the subject, under the inducement which the laws provide for information, be of essential aid in arresting, and perhaps preventing, the attempts illicitly to introduce merchandise into your district from Canada.

I will thank you, therefore, to communicate with such persons as those above described, and whose services you think may be properly afforded; forwarding to them a copy of the within, signed by yourself either in a

printed or written form as you may prefer.

Your attention is specially called to the general collection law of March 2, 1799, and acts of March 2, 1821, and March 3, 1823, regulating the entry of merchandise imported into the United States from any adjacent territory, and the 19th section of the tariff law of August 30, 1842.

What is expected, of course, of persons who may gain information of violations or evasions of the laws, is the immediate communication to yourself, or other proper officer of the customs, of such information, specific enough to insure the seizure of the merchandise, that the same may be condemned and its proceeds distributed agreeably to law. Such persons must be careful, however, to confine themselves to the ascertainment and communication of facts, and not undertake to interfere with or arrest property or persons without legal appointment and warrant, as

they may render themselves personally liable for a trespass.

You will find, on reference to the 65th section of the general collection law of March 2, 1799, that a person specially appointed by you for that purpose, may search, upon due compliance with the conditions of that section, for dutiable goods which he may reasonably suspect not to have paid duties, and to secure them, if found, for trial. Such appointment should be duty made in writing, and state specifically the purpose for which it is made. In the case of goods suspected to be concealed in any dwelling house, store, building, or other place, (except a ship or vessel,) a warrant must first be obtained from a justice of the peace to enter the premises (in the day time only) to make the search. Such person, how-

eve, will be entitled to no other compensation than that share of the proceeds of the merchandise condemned or penalty recovered, granted by the law to an informer, if he be such, whose evidence may not be used on the trial for the condemnation of the goods, or suit for the fine or

penalty.

It is also to be understood that the government enters into no arrangement with these gentlemen, or insures a compensation. It is presumed that as good citizens they would be willing to give such aid in the punishment of crime, and thus entitle themselves to the share of the forfeitures accruing therefrom which the law prescribes to informers; and you will be careful to report to this department, from time to time, the names of the persons who thus undertake to aid you in protecting the public revenue, and the results of such agency in detecting and repressing infractions or evasions of the revnue and collection laws within your

I am, very respectfully,

JAMES GUTHRIE, Secretary of the Treasury

Collector of the Customs.

Collector's Office,

Sin: The department charged with the administration and execution of the revenue and collection laws of the United States desires to call to its aid, in its efforts to detect and repress infractions or attempted infractions of those laws on the northern frontier, all law-abiding and patriotic citizens who feel an interest in the preservation of the national honor, and the protection of the public revenue.

It is not doubted that this call will be cheerfully responded to, and the

solicited aid readily afforded.

From your position, and the nature of your business, attempts to evade the revenue laws, or actual violations of them, may fall under your observation, or reliable information thereof may be accessible to you

by a little effort on your part to obtain it.

It is desired, whenever you have a reasonable cause of suspicion that merchandise imported into the United States has not been duly entered at the custom-house, that you should at once communicate information of the facts to the nearest collector, or deputy collector, whose duty it will be, if a reasonable suspicion of a violation of the law is entertained, to cause the merchandise to be seized for trial and condemnation, and to enforce such other penalties as may be prescribed by

You will be entitled under the law to one fourth of the net proceeds of the merchandise condemned, and of the penalties and fines recovered, under the general collection law of 2d March, 1799, and the acts of 2d March, 1821, and 31 March, 1823, regulating the importations of merchandise into the United States from any adjacent territory, where the prosecution is commenced, or seizure made, on information furnished by you, provided you are not used as a witness on the trial.

		Collecto	r of	the	Customs.
°To	Mr.	 •	•		•

General instructions to collectors and other officers of the customs, under acts of 13th July, 1832, 30th June, 1834, and 13th August, 1846, "concerning tonnage duties on Spanish ressels from Cuba and Porto Rico."

TREASURY DEPARTMENT, June 15, 1853.

The department has under consideration a question presented by his excellency the minister of Spain in reference to the liability to tonnage duties of Spanish vessels from the islands of Cuba and Porto Rico on

arriving in ports of the United States.

It appearing to the satisfaction of the department that no change or modification on the port of the Spanish authorities, of the regulations granting certain privileges to vessels of the United States entering and departing from ports of the said island of Cuba, has taken place since the date of the circular instructions from this department of the 13th of June, 1849, superseded by instructions of my predecessor dated June 30th and 10th August, 1852, it is deemed expedient, and proper, in view of existing treaty stipulations and the laws of the United States, that the said circular instructions of 13th June, 1849, a copy of which is hereto annexed, should be revived and continued in full force, with the additions and modifications which follow, to wit:

The exemption from the liability to tonnage duty of Spanish vessels coming from ports in the island of Cuba, to extend to such vessels arriving in ports of the United States, either in ballast or laden with molasses taken in at any of the said ports; together with such quantity of fresh fruit, the production of said island, as may be deemed by the collector and naval officer, under the provisions of the 45th section of the act of 2d March, 1799, to be admissible as surplus stores: Provided, The said vessels depart from the United States in ballast, or with their cargoes of molasses, or cargoes of the staple productions of the United States, under the restrictions contained in the 3d section of the act of 30th June, 1834: And provided further, That the master of such vessel produce to the collector, at the time of entry, a certificate from the chief officer of the customs at the port in the island of Cuba from which the vessel last departed, certified by the American consul, showing the continuance in said island of the exemption from tennage duties of American vessels, under the circumstances above stated.

Official information being in possession of the department that, under regulations established in the island of Porto Rico on the 1st November, 1851, no tonnage duty is levied on vessels of the United States entering

the ports of said island and departing thence in ballast, or with cargoes of molasses, the same privileges and exemptions accorded to Spanish vessels arriving in ports of the United States from the island of Cuba are to be extended to such vessels coming from the island of Porto Rico, under like restrictions and requirements, on entering and departing from ports of the United States.

JAMES GUTHRIE, Secretary of the Treasury.

Circular instructions to collectors and other officers of the customs.

TREASURY DEPARTMENT, June 13, 1849.

The particular attention of the department has been called to the operation of the acts of Congress "concerning tonnage duty on Spanish vessels," approved 13th July, 1832, and 30th June, 1834, with especial reference to certain privileges, accorded on the part of the Spanish government to vessels of the United States entering and departing from ports in the "island of Cuba," under certain mentioned circumstances.

The privileges referred to are ascertained, from an authentic source, to

be of the following description, to wit:

1st. That American vessels entering ports in the island of Cuba, in ballast, are not subjected to the payment of any tonnage duty whatever.

2d. American vessels entering the ports in the island of Cuba with a cargo of any description of merchandise whatsoever, are exempted from any charge of tonnage duty if such vessels export or convey therefrom

cargoes of molasses taken in at said ports.

The laws of 1832 and 1834, before mentioned, contemplate and require Spanish vessels coming from any port or place in the islands of Cuba or Porto Rico, to pay in the ports of the United States the same rate of duty on tonnage that shall be levied on American vessels at the port in said islands from whence such Spanish vessels shall have last departed; and likewise such further tonnage duty as shall be equivalent to the amount of discriminating duty that would have been imposed on the cargoes imported in the same vessels respectively, if the same had been exported from the port of Havana in American bottoms. It consequently follows, that where no tonnage duty or discriminating duty on the cargoes of American vessels entering and departing from ports or places in the island of Cuba is imposed and collected thereat, Spanish vessels coming from such ports or places are to be similarly treated as regards tonnage duty in the ports of the United States.

The collectors of the customs are therefore instructed to abstain from the exaction of any tonnage duty on Spanish vessels coming from ports or places in the island of Cuba in ballast, or when laden with cargoes of molasses taken in at either of said ports. Their cargoes, of course, must be subjected to the duties levied on the article by the tariff act of 30th July, 1846, together with the additional duty imposed by the 11th

section of the tariff act of 30th August, 1842.

Where Spanish vessels are about to depart from a port of the United States with any goods, wares, or merchandise, for any destination other than some port or place in the island of Cuba, or Porto Rico, the bond and security required by the 3d section of the act of 30th June, 1834, must be exacted in all such cases before allowing clearance or departure of the vessels.

To entitle Spanish vessels, coming from ports in the island of Cuba, to the exemption from tonnage duties, in the cases contemplated in these instructions, it is deemed a matter of proper precaution, in the event of any future modification or change on the part of the Spanish authorities of these privileges, to require the master of any such Spanish vessels to produce to the collector, at the time of entry, from the chief officer of the customs at the port in the island of Cuba from which the vessel last departed, a certificate, duly verified by the American consul, stating what tonnage duty, if any, is exacted on American vessels arriving at said port in ballast; likewise what discriminating or other duty, if any, is charged on such vessels when departing from said port with cargoes of molasses.

W. M. MEREDITH,
Secretary of the Treasury.

General instructions to such public officers as hold, or may hereafter hold public money, payable upon the drafts of the Treasurer of the United States.

TREASURY DEPARTMENT, July 19, 1853.

Inconveniences having arisen to the holders of drafts payable more than four hundred miles from the seat of government, from the provision contained in the circular of the 25th August, 1846, requiring such drafts to be presented for payment within ninety days from the date of such drafts, the time for such presentation is hereby extended to six months, and they may be paid according to their tenor—if presented within that time.

JAMES GUTHRIE, Secretary of the Treasury.

General instructions to collectors and other officers of the customs, under the act of 3d March, 1851, regulating the appraisement of imported merchandise.

TREASURY DEPARTMENT, July 20, 1853.

Your special attention is called to the following instructions in relation to the appraisement of merchandise, under the act of 3d March, 1851, additional to, or in modification of, the circular instructions from this department dated 27th March, 1851:

The invoice cost of foreign merchandise, supported by the oath required by law, will be held and taken as the importer's declaration of value at the port and time of shipment, and conclusive against the importer; unless, before entering the same, the said importer, his consignee, or agent, where the merchandise has been actually purchased, shall declare in writing, under oath, on the invoice, a decline in value between the time of such purchase and the date of shipment, and the amount thereof; in which case, such declared value shall be conclusive against the importer; but in either case, the appraisers will determine and fix such additional value as the law and the facts may warrant.

JAMES GUTHRIE, Secretary of the Treasury.

al instructions to collectors and other officers of the customs in districts adjacent to any foreign territory.

Collectors of the customs and their deputies, in districts of the United States adjacent to foreign territories, are vested with power and authority, and it is their duty, to appraise all merchandise entered at their respective ports, when other appraisers are not provided for by law.

The first section of the act of 1821, regulating the entry of merchandise imported from any adjacent territory, requires a manifest of all goods imported, as above, with a description of the quantity, quality, and value of the goods, supported by the eath of the importer.

The first section of the supplementary collection act of 1st March, 1823, requires a true invoice of the goods, with the foreign cost, to be

presented to the collector before entry.

The collectors will, therefore, require an invoice or a manifest, as required by the act of 1821, describing the character, quantity, quality, and cost, or value of the merchandise, supported by the oath of the importer, before allowing the entry; and when the importer has no invoice, nor such manifest as above prescribed, will cause him to make and present the invoice or manifest required by law, and to support it

by oath before allowing the entry to be made.

The invoices thus made are to be taken as true against the importer; but it will be the duty of the collectors, by all the reasonable ways and means within their power, to ascertain, estimate, and appraise the merchandise at its true value in the foreign port or place from which it was shipped, as authorized and directed in the sixteenth and seventeenth sections of the tariff act of 1842, and to add thereto the charges as provided in the appraisement act of 3d March, 1851, in order to determine the dutiable value thereof.

The collectors are instructed, that among other frauds on the revenue frequently attempted, is that of entering merchandise at less than the true quantity and below the true value, and that if any merchandise imported is of ten per cent. greater value than that given in the invoice at which it has been entered, from either an increased quantity or reduced value, or from both combined, it is their duty to increase the entered value to the true value thereof, and impose the twenty per cent.

additional duty thereon, as provided by law; and that when the merchandise shall be found to be from either or both of said causes, of twenty per cent. greater value than the entered value, it is evidence of

fraud, which will justify a seizure on the ground of fraud.

The collectors are instructed that they should be careful to ascertain the correct value of all merchandise entered at their respective ports, and to cause the same duty to be collected upon like goods entered by different importers from the same ports or places; and they are directed to include in their monthly abstracts the several rates of duties collected on merchandise entered at their ports during the preceding month.

They are also instructed that goods should pass their custom-house in the regular order in which the entries are made, and no preference be

given to any one from any cause.

They are also instructed that it is made the duty of the appraisers at large to produce uniformity in valuation of merchandise entered at the different ports, and that it is the duty of collectors to advise and counsel

with such appraisers at large upon the subject.

They are also instructed that it is their duty to ascertain the character, quantity, and quality, as well as value, of all merchandise entered at their respective ports, and for that purpose to have it duly examined; but in no case are collectors or their deputies, previous to the actual entry and examination of merchandise, to inform the importers or others of the value at which such merchandise will be admitted to entry. The collectors are also instructed that the original books of entry and books of account, together with all accounts and vouchers of their respective offices, are the property of this department, and are to be kept and preserved as such, and transmitted to their successors in office.

JAMES GUTHRIE, Secretary of the Treasury.

TREASURY DEPARTMENT, July 30, 1853.

General instructions to collectors and other officers of the customs.

TREASURY DEPARTMENT, August 25, 1853.

It is deemed advisable, for more convenient use and reference by officers of the customs, to embody in a single circular several important instructions issued by the department from time to time in regard to the

collection of the revenue from customs.

The act of March 3, 1851, entitled "An act to amend the acts regulating the appraisement of imported merchandise, and for other purposes," provides, in its first section, "That in all cases where there is or shall be imposed any ad valorem rate of duty on any goods, wares, or merchandise imported into the United States, it shall be the duty of the collector within whose district the same shall be imported or entered, to cause the actual market value or wholesale price thereof, at the period of the exportation to the United States, in the principal markets of the country

from which the same shall have been imported into the United States, to be appraised, estimated, and ascertained; and to such value or price shall be added all costs and charges, except insurance, and including in every case a charge for commissions at the usual rates, as the true value at the port where the same may be entered, upon which duties shall be assessed."

It will be perceived that the legal provision above cited requires the duty to be assessed on the "actual market value or wholesale price" of merchandise in the principal markets of the country from which imported, "at the period of the exportation to the United States," and on

all costs and charges except insurance.

When, however, goods are imported from a country other than that of their growth, production or manufacture, and the invoice or appraised value is less than "the actual market value or wholesale price thereof" in the principal markets of the country of the growth, production or manufacture, at the period of the exportation to the United States, collectors will report such cases, with all the facts and circumstances, to the department, and await its instructions, before the final adjustment of duties.

The "period of exportation" where the merchandise is laden on board a vessel in the shipping port of the country of origin, or in which it was purchased or procured for shipment to an owner, consignee, or agent residing in the United States, must be deemed and taken to be the date at which the vessel leaves the foreign port for her destination in the United States.

That period will ordinarily be established by the production of the

clearance granted to the vessel at the foreign port of departure.

Importations may also be made from interior countries remote from the sea-board, and having no shipping ports of their own, through the sea-ports of other countries. The "period of exportation" in such cases, at which the actual market value and wholesale price of the merchandise in the principal markets of the country whence imported into the United States, is to be ascertained and estimated as the basis of dutiable value, is the date at which the merchandise in question leaves said interior country, destined in good faith, and in the regular and usual course of trade, for shipment to some owner, consignee, or agent, residing in the United States; of which satisfactory proof must be exhibited at the time of entry.

That period will be established ordinarily by the date of authentica-

tion of the invoice by the consular certificate.

In the absence, satisfactorily explained, of the proofs above indicated, showing the date of exportation from the foreign country, other evidence

of that fact may be taken by the appraisers.

The law requires that there shall be added to the "actual market value or wholesale price" of imports, ascertained as above, in order to fix the dutiable value, "all costs and charges, except insurance, and including in every case a charge for commissions at the usual rates." These charges are—

1st. They must include "purchasing, carriage, bleaching, dying, dressing, finishing, putting up, and packing," together with the value of the sack, package, box, crate, hogshead, barrel, bale, cask, can, and

covering of all kinds, bottles, jars, vessels, and demijohns.

2d. Commissions at the usual rate, but in no case less than two and a half per cent.; and where there is a distinct brokerage, or where brokerage is a usual charge at the place of shipment or purchase, that to be added likewise.

3d. Export duties, cost of placing cargoes on board ship, including drayage, labor, bill of lading, lighterage, town dues, and shipping charges, dock or wharf dues; and all charges to place the article on ship board, and fire insurance, if effected for a period prior to the ship-

ment of the goods to the United States.

Freight from the foreign port of shipment to the port of importation is not a dutiable charge; but when goods are transported from an interior country for shipment to the United States, the cost of transportation to the foreign part of shipment must also be included among the dutiable charges.

The first section of the supplemental collection law of the 1st March, 1823, requires a true invoice of merchandise to be presented to the col-

lector at the time of the entry.

Invoices of goods actually purchased must exhibit the true cost, with

all dutiable costs and charges.

Invoices of goods procured otherwise than by purchase, such as shipments made by manufacturers or producers, must exhibit the "actual market value or wholesale price thereof at the period of the exportation

to the United States," with all charges included.

On the entry of imports actually purchased, (the invoice exhibiting the true cost,) the owner, consignee, or agent may avail himself of the privilege afforded by the 8th section of the tariff act of the 30th July, 1846, of adding to the entry to raise the cost or value given in the invoice to the "actual market value or wholesale price of the goods at the period of the exportation to the United States." But the invoice cost of foreign merchandise, supported by the oath required by law, will be held and taken as the importer's declaration of value at the port and time of shipment, and conclusive against him; unless, before entering the same, the said importer, his consignee, or agent, where the merchandise has been actually purchased, shall declare in writing, under oath, (annexed form, No. 1) on the invoice, a decline in value between the time of the purchase and the date of the exportation, and the amount thereof; in which case, such declared value shall be conclusive against the importer. In either case, the appraisers will determine and fix such additional value as the law and the facts may warrant.

The 5th section of the tariff act of the 30th July, 1846, provides, that in the case of goods actually purchased, if the appraised value thereof be found to exceed by ten per cent., or more, the value declared on the entry, then, in addition to the duties imposed by law on the same, there shall be levied, collected and paid, a duty of twenty per cent. ad valorem

on such appraised value.

In the case of imports procured otherwise than by purchase, such as shipments made by manufacturers and producers, and which are required to be invoiced at the "actual market value or wholesale price," in the principal markets of the country whence imported, at the period of exportation to the United States, with the proper dutiable charges, if the appraised value shall exceed, by ten per cent. or more, the invoice value, then, in accordance with the provisions of the 17th section of the act of

the 30th August, 1842, in addition to the duty imposed by law on the same, there must be levied and collected fifty per centum of the duty

imposed on the same, when fairly invoiced.

These additional duties are not legally chargeable, except in cases where the appraised value of the goods imported shall exceed, by ten per cent. or more, the value as declared in the entry, exclusive of the amount of "charges" ascertained and added to such appraised value by

the appraisers in making up the dutiable value.

In cases where, on proper ascertainment, there shall prove to be an excess of quantity of any article, or articles, over the quantity stated in the invoice, and the United States appraisers shall be of opinion that such excess does not arise from mistake, accident, or other excusable cause, but from fraudulent intent and design on the part of the shipper, and the collector concurring in such opinion, the invoice and importation shall be deemed fraudulent, and seizure and proceedings to confiscate the goods should immediately take place. But when no intention of fraud is manifested, in the opinion of the appraisers and collector, the regular duty will be exacted on the full quantity ascertained, but no additional duty will be levied in consequence of any excess in quantity over that given in the invoice; and any instructions heretofore issued by the department conflicting with this regulation, will henceforth be inoperative.

At ports where there are no United States appraisers, the collector and naval officer-where there is a naval officer, and where there is none, the collector alone-will ascertain, estimate, and appraise the dutiable

value of imports.

The owner, importer, agent, and consignee, if dissatisfied with the decision of the appraisers, or the officer or officers of the customs, as aforesaid, acting as appraisers, may, in pursuance of the provisons of the 17th section of the act of 30th August, 1842, if he has complied with its requirements, forthwith give notice to the collector, in writing, of such dissatisfaction; and the collector is required by the provisions of that section, modified by the 3d section of the act of the 3d March, 1851, 10 select one discreet and experienced merchant, a citizen of the United States and familiar with the character and value of the goods in question, to be associated, when practicable, with an appraiser at large, and when not, to select two such discreet and experienced merchants, to appraise the goods in question; and if they shall disagree, the collector shall decide between them; and the appraisement, thus determined, shall be final, and deemed and taken to be the true value of said goods, and the duties shall be levied thereon accordingly. This department cannot, therefore, entertain any appeal from such appraisement made in good faith, and in pursuance of law and instructions.

When the value of an importation is advanced by the appraisers, ten per cent. or more, they will notify the importer, as per form No. 2, hereto

A notice to the collector, in writing, requesting a re appraisement, signed by the owner, importer, agent, or consignee, according to the annexed form No. 3, will meet the requirement of the law.

The merchant appraiser or appraisers, as the case may be, will be

appointed by the collector, according to the annexed form No. 4.

The oath will be administered by the collector to the merchant appraiser or appraisers, according to the annexed form No. 5.

The report of the appraisers will be according to form No. 6.

The appraisers, and officer or officers, of the customs, aforesaid, acting as appraisers, will consult and advise freely with the appraisers at large; it being made the duty of these officers by the act of the 3d March, 1851, under the direction of this department, to afford such aid and assistance in the appraisement of merchandise, as may be deemed necessary to protect and insure uniformity in the collection of the revenue from customs; and to enable them the better to discharge that duty, they will be permitted to examine and compare the valuations of imports, and require explanations of the quantities and values of articles undergoing investigation in the appraisers' department.

When appeals are taken from the decision of the local appraisers, or officers of the customs acting as appraisers, to a merchant and an appraiser at large, if the latter finds himself disqualified by any preliminary examination, or expression of opinion, he may decline to act, and the collector, if the importer desires it, may direct the general appraiser

residing nearest his port to act on the appeal.

In pursuance of the 52d section of the act of 2d March, 1799, no abatement of the duties, in consequence of damage occurring on the voyage of importation, can be allowed, unless proof to ascertain such damage shall be lodged in the custom-house within ten days after the landing of such merchandise. The certificates of port wardens, marine surveyors, or other officers whose province it is to ascertain marine damage, would furnish satisfactory proof on which the collector would be justified in ordering an appraisement of the damage. But such certificate, or whatever other satisfactory form in which the proof of damage may be presented, should specify the particular articles, or packages, damaged, and the official examination and appraisement should be confined to the articles and packages so specified.

In all cases where the damage exceeds fifty per cent., collectors will continue to report the same to the department, and await its instructions.

Discounts are never to be allowed in any case, except on articles where it has been the uniform and established usage heretofore, and never more than the actual discount positively known to the appraisers; but in no case to be allowed unless it is exhibited on the face of the invoice.

None of the allowances for tare, draft, leakage, breakage, &c., specified in the 58th and 59th sections of the act of 2d March, 1799, are to be made, not being applicable to imports subject to ad valorem duties.

No more than the actual tare, or weight of a cask, or package, can be allowed, and if the collector doubts the correctness of the tare specified in the invoice, it will be his duty to cause the actual tare, or weight of the cask or package, to be ascertained; and for that purpose, he may cause to be emptied and weighed such number of casks and packages as he may deem advisable.

The law requires invoices of merchandise imported into the United States, and subject to an ad valorem duty, to be made out in the currency of the country, or place, from which the importation is made. In the estimation of the values of imports in order to the assessment of duties, the currency of the invoice must be converted into money of the United

States according to the rates of value determined in the following modes, to wit:

1st. Where the value of the foreign currency is fixed at specified rates by a law of the United States, that value is to be taken in all cases in estimating the duties, unless collectors shall have been otherwise previously instructed by this department, or a depreciation of the value of the foreign currency is duly shown by consular certificate attached to the invoice.

2d. Where the value of the foreign currency is not fixed by any law of the United States, the invoice must be accompanied by a consular certificate showing its value in Spanish or United States silver dollars.

The consular certificate of the value of the foreign currency in which the invoice is made out, is, in all cases, to be taken as conclusive, unless collectors shall have good reason to believe its statement erroneous, in which case they will submit the facts to the department and await its instructions.

A list of the values of foreign currencies, as fixed by law, is appended to this circular.

The law requires the owner of foreign merchandise imported into the United States to verify the invoice by his oath.

Owners, importers, consignees, or agents, residing in the United States, must take the oath before the collector of the customs at the time of entry.

Owners not residing at the time in the United States must verify their invoices by oath, administered by a consul or commercial agent of the United States, or by some public officer duly authorized to administer oaths in the country from which the goods shall have been imported, in which latter case such official certificate must be authenticated by a consul or commercial agent of the United States.

If there be no consul or commercial agent of the United States in the country from which the merchandise shall have been imported, the authentication must be executed by a consul of a nation at the time in amity with the United States, if there be any such residing there. If there be no such consul, the authentication must be made by two respectable merchants, if any such there be, residing at the port from which the merchandise shall have been imported.

The several provisions of law, and the regulations and instructions in pursuance thereof, prescribed by the department for the due ascertainment of the quantity, quality, and value of imports, will be faithfully observed, and the requisite examinations thoroughly made, and the abstracts, returns, and accounts required by law and instructions, regularly

and promptly transmitted to the department.

Imports should pass the custom-house in the order in which they are made, and no preference should be given to one importer over another in

that respect.

The collectors are also instructed that the original books of entry and books of account, together with all the papers relating to the business of their respective offices, are the property of the United States, and are to be kept and preserved as such, and transmitted to their successors in office.

JAMES GUTHRIE,
Secretary of the Treasury.

## General instructions to consuls of the United States.

TREASURY DEPARTMENT, September 20, 1853.

Sir: The department has noticed, with much satisfaction, those instances in which consuls, acting upon the suggestions contained in circulars Nos. 48, 49, 56, 57, have aided in the detection of attempted frauds upon the revenue of the country, by unscrupulous shippers or importers, the prevention of which is especially due to the fair and upright trader. Your attention is now respectfully recalled to the circulars above cited; and I would further add, that the department deems it expedient to direct, that where consular certificates to invoices of goods

destined for the United States are required, they shall be granted only by the consul nearest to the place where such goods have been manufactured or prepared for exportation. A practice, it is understood, has extensively prevailed, of transmitting invoices to an agent at the port of shipment, for the usual consular certificates, whose deposition must necessarily be made without due knowledge of their accuracy or details. Thus invoices of goods manufactured or prepared for shipment in Switzerland are, in most cases, sworn to at Havre; and the same with those from Lyons, and those from Cette, are verified at Marseilles-those from Aix, at the ports of Holland or Belgium, &c., &c. It is manifest that great abuses must spring from such a practice, the meaning and intent of the law being to require those who must necessarily have an entire knowledge of the spirit and contents of the invoices, personally to depose to their contents; and all consuls of the United States are therefore strictly enjoined to conform to the rule now established, and to report to this department any violation of the same which may come to their knowledge.

An erroneous impression exists with many foreign shippers of goods to the United States, that the consuls before whom the oath to invoices is either taken or verified have no power to examine the details of such invoices, but simply to verify the fact of such oath being taken before

them, or by an offier in authority, known to them as such.

For the purpose of carrying out a particular system of revenue duties, the government of the United States requires that the accuracy of certain invoices should be ascertained and verified, and a reasonable time for consuls to accomplish that object, by an examination of such invoices, cannot be justly denied to them. Consuls are not supposed to be practically acquainted with the market prices or value of all merchandise within their district, or of the precise weights, tares, measures, bounties, &c., &c., included therein; but experience and inquiry will result in such information on these points as will enable them to render efficient aid to the revenue officers of the United States, by promptly informing the department, as well as the collector of the port to which the goods may be destined, of every instance where an exporter persists in refusing to correct his invoice when apprized of its defects, and that it will be subject to revision at the custom-houses of the United States.

In the application of an exclusive system of ad valorem duties to the revenues of the United States, the department relies with confidence upon the vigilance of consuls for the detection of any abuses that may be committed, or any unfair practices that may be supposed to exist, in regard not only to the declaration of the original cost or export value of foreign merchandise, but in all the charges, discounts, bounties, &c., incident to the business of preparing goods for the markets of the United States, as well as for their promptness in reporting all the particulars to

the department.

The board of general appraisers being permanently organized at New York, you will oblige the department by forwarding to them occasionally (directed to the chairman of said board) such price-currents, manufacturers' statements of prices, or merchants' printed circulars or prices, or any other general information, as may be within your reach, and that you may consider useful to them in the discharge of their duties.

Your attention is also directed to the eighth and eleventh sections of the act of Congress of March 1, 1823, in which it will be seen that a

consular certificate is required in all cases of invoices of goods exported by the manufacturers thereof, in whole or in part, for their account, not withstanding another owner in part may reside in the United States. This provision of the law of 1823, the department has reason to believe, has been hitherto overlooked in many instances.

But under no circumstances should a consul administer an oath, unless he be authorized so to do by the laws of the country in which his consulate is situated, and unless the laws of that country regard the oath so administered, when falsely taken, as perjury, and prescribe an

adequate punishment for the offence.

When the laws of a foreign country do not authorize consuls to administer the oath, it should be taken before the nearest local magistrate, whose legal competency should then be certified by the nearest

consul, as already directed.

It will be incumbent upon you, therefore, to inform yourself immediately upon these two points, and to form your action accordingly, in all future cases of granting certificates to invoices, and to advise the

department promptly thereof.

If a consul ascertains and has reliable evidence of the falsity of an oath, either administered by him or by a local magistrate whose certificate he has authenticated, he should notify the department, which will transmit to him the original invoice and oath, to be used, if deemed expedient, in a prosecution for perjury.

You will of course take care to give immediate publicity to the material points in these instructions within your district, that the change in the system of granting certificates to invoices, which will be material and important, may cause the least possible embarrassment to traders

and shippers

In acknowledging, as you are especially requested to do, the receipt of these instructions, such suggestions, in relation thereto, as may occur to you, will be respectfully considered. A copy has been furnished to the collectors of customs of the United States for their government.

Very respectfully, your obedient servant,

JAMES GUTHRIE, Secretary of the Treasury.

### General instructions to collectors of customs.

TREASURY DEPARTMENT, September 21, 1853.

Sir: Information has been received at the department, that the 4th section of the law of the 28th March, 1796, for the protection of American scamen, is subjected to serious abuses in foreign ports by the transfer or sale, to foreign seamen, of the certificates of citizenship issued under that law.

In the present peaceful position of the greater proportion of those countries to which the commerce of the United States extends, the protections, so called, granted to American seamen, naturalized or native, are of little

other practical value than to enable them to demand the aid and succor of the American consul in a foreign port, in case of sickness or other disability; but, aware as they are of the facility of procuring the renewal of these "protections" on their return to the United States, they very often do not scruple to transfer, for a consideration, the right to such aid and succor, to a foreign seaman, who, in case of such sickness or disability, is thus enabled to avail himself of the provision made for American citizens in due course of law.

Consuls might interpose some check to the abuses referred to, by strict investigation, in cases where there exists in their minds a suspicion that the sick or destitute seaman, claiming relief under a protection, is not the individual to whom the same was originally issued; and if satis-

fied on that point, by withholding the relief demanded.

Under the existing law, the department is without the power essentially to correct the impositions referred to, and deems it therefore expedient to call your especial attention to the subject, requesting you to use every vigilant care in issuing certificates of citizenship under the law already cited, especially in reference to the proofs adduced at the time by applicants for said certificates.

You will perceive, by the preceding general instructions to consuls, that important changes have been directed to be made in the manner of granting consular certificates to invoices of goods destined for the United States, and you are requested to give such instructions as

will conform therewith in your office.

You will further report to this department any case in which you may have reason to believe that a shipper or importer has sworn falsely, or in which it may appear that a consul has deviated from these instructions, by exercising his functions within the proper district of one of his colleagues.

A copy of these instructions has been furnished to the consuls of the

United States, for their government.

Very respectfully, your obedient servant,

JAMES GUTHRIE,

Secretary of the Treasury.

## TREASURY DEPARTMENT, September 22, 1853.

Sin: In the commercial returns from your district for the quarter ending the 30th instant, and in future, you will omit the designation heretofore known in our commerce with Germany as the Hanse Towns, and in lieu thereof introduce the three imperial cities of Hamburg, Bremen, and Lubec, so as to exhibit the imports, exports, and tonnage employed in our trade with each. The remaining ports of Germany will be embraced under the designation of other ports in Germany.

As the information derived from the returns of the commerce and navigation of our country is of great importance to this department, to Congress for legislative action, and to the commercial interest at large, it is desirable that the returns should be made to the department at as early a day as practicable after the close of the quarter, and you are therefore requested to give your particular attention to their preparation, and have them forwarded without unnecessary delay to the Register of the Trea-

23

sury, as required by the 13th section of the act of February 10, 1820, entitled "An act to provide for obtaining accurate statements of the foreign commerce of the United States."

Very respectfully, &c., JAMES GUTHRIE, Secretary of the Treasury.

- , Collector.

General instructions to collectors and other officers of the customs.

TREASURY DEPARTMENT, September 22, 1853.

It appearing from the abstracts of duties on merchandise imported, transmitted to this department from the lake and frontier ports, that great diversity of practice prevails in the classification of articles of wood, under the tariff act of 1846. it is deemed expedient, in order to the establishment of uniformity in the charge of duties at the several ports, to give the views of the department in reference to the various descriptions of the article in question as imported.

The several varieties of wood specifically provided for in the tariff act

are as follows:

In schedule B, charged with 40 per cent duty.—Manufactures of cedar,

ebony, granadilla, mahogany, rose, and satin woods.

In schedule C, charged with 30 per cent. duty.—Baskets of osier, willow, &c., not otherwise provided for; brooms; canes and sticks for walking, finished or unfinished; carriages and parts of carriages; corks; manufactures of the bark of the cork tree; fire-wood; frames and sticks for umbrellas, parasols, or sunshades, finished or unfinished; cabinet or household furniture.

Under schedule E, charged with 20 per cent. duty.-Barks, not otherwise provided for; boards; cedar, ebony, and granadilla woods, unmanufactured; lath; mahogany, unmanufactured; osier, prepared for basketmakers' use; planks; rese-wood and satin wood, unmanufactured; spars; staves; timber, hewn and sawed, and timber to be used in building wharves; willow, prepared for basket-makers' use.

In schedule F, charged with 15 per cent. duty.—Bark, Peruvian and

Quilla; cork-tree bark, unmanufactured.

In schedule G, charged with 10 per cent. duly .- Ratans and reeds, unmanufactured.

In schedule H, charged with 5 per cent. duty.—Brazil wood, and all

other dye-woods in sticks.

By the provisions of schedule C, in addition to the specified articles classed therein, a duty of 30 per cent. is levied on all manufactures of wood, or of which wood is a component part, not otherwise provided for; and also upon wood unmanufactured, not otherwise provided for.

Under these general provisions, a duty of 30 per cent. is to be charged on the following-named articles, questions in tegard to which have been submitted to the department, viz: Arks of boards, logs, &c.; barrels; beams; boards, when dressed or planed, tongued or grooved; shingle

bolts, eaves troughs, fence-rails, hogsheads, headings, hoops, knees for boats or ships; lasts, finished or rough; saw-logs, and logs of all kinds of wood, except those excepted in schedule E; palings, pickets, poles, posts, rafts of logs, rollers, shingles, slabs, shooks, spokes for wagons, &c.; staves, if dressed; and railroad ties.

In place of the indefinite term "lumber," as it appears in the abstracts. although not used in the tariff act, it is desirable that the particular designation of the articles in view should be given, as "boards," "planks,"

rough or dressed, &c., as the case may be.

The occasion is taken to call the special attention of the collectors and all other officers of the customs, of the frontier and lake ports, to the attempts which there is reason to believe have and may be again made, by unscrupulous traders, to effect the illicit introduction of dutiable articles into the United States, from the adjacent foreign possessions, by the agency of Indians, passing into the United States under the sanction of the 105th section of the general collection act of 3d March, 1799.

This provision of law exempts from the payment of duties the "peltries," and " proper goods and effects" of the Indians, "unless the same be goods in bales or other large packages, unusual among Indians, which shall not be "considered goods belonging bona fide to Indians, nor be

entitled to exemption from duty."

The officers of the customs will therefore refuse the free entry of goods brought across the boundary line by any Indian, unless from a close examination of the case he is satisfied that they belong bona fide to the Indian bringing them; and in cases where there is reasonable cause for suspicion of intended fraud, will at once seize the goods and cause the proper judicial proceedings to be instituted against the same, as forfeited under the laws.

JAMES GUTHRIE, Secretary of the Treasury.

## Circular to heads of bureaus.

TREASURY DEPARTMENT, October 1, 1853.

Sir: The hours of business to be observed in the various branches of the Treasury Department, from and after this date, and until the 1st of April next, are, from 9 o'clock a.m., to 3 o'clock p. m. This regulation reduces the period of labor, as heretofore observed, in some offices, one hour; and as six hours' work in the day does not seem to be an unreasonable exaction on the part of the government, in return for the support it affords, it is expected that these hours will be faithfully observed and applied by all, without abatement or misappropriation, to the duties of their respective stations.

Absence from the office during business hours is not to be permitted, except from sickness; in which case notice must be given to the head of the office. Neither will indulgence in ardent spirits during these hours be tolerated. The first offence of this kind will, in every instance,

be visited by removal from office.

The Secretary is happy to perceive the salutary change which has

taken place in the business habits of the officers of the department, and the great improvement in the condition of the business, which is its appropriate fruit. He trusts the officers of the department will all feel a just pride in placing and keeping the business throughout in such a condition as at all times to be promptly despatched at once, for the safety of the United States, the credit of the department, and the satisfaction

and convenience of individuals. The heads of the bureaus are earnestly requested to promote habits of order and decorum on the part of the clerks in their respective offices, and sentiments of comity and good will in their intercourse with each On the other hand, they will repress, as far as may be in their power, the reading of newspapers during office hours, and waste of time Every employ6 by unnecessary or frivolous conversation or otherwise. in the department is the representative of the government, in respect to the particular business intrusted to his care. Whilst he is unflinchingly to defend the interests of the United States committed to his charge, he should treat with frankness, courtesy, and kindness all those who have business to transact with him. And thus, by dignity of deportment and an accommodating spirit, serve to conciliate, within the sphere of his employment, the confidence and respect of the people for the government and institutions of their country.

I am, very respectfully,

JAMES GUTHRIE,

Secretary of the Treasury.

[The foregoing was sent to the head of each bureau of the department.]

General instructions to collectors and other officers of the customs, concerning allowance for discounts, under acts of 20th April, 1818, and 1st March, 1823.

TREASURY DEPARTMENT, October 6, 1853.

It appearing, from representations made to this department from several of the collection districts, that more specific instructions than have heretofore been given are required in relation to the allowance of discounts on invoices of imported merchandise, your special attention is called to the subject.

By the 21st section of the supplementary collection act of 20th April,

1818, it is provided:

"That no discount shall be allowed on any goods, wares, or merchandise, subject to ad valorem duty, admitted to entry, unless the importer shall expressly state, on oath or affirmation, that such discount has been actually and bona fide allowed to the owner or owners of such goods, wares, or merchandise, in the payment made for the same."

The supplementary collection act of 1st March, 1823, in the 4th, 5th, 7th, and 5th sections, prescribing the oath or affirmation to be taken by the owner, consignee, importer, or agent, as the case may be, before

their being admitted to entry, requires that it shall be declared, under such oath or affirmation, "that the invoice contains no discounts, boun-

ties, or drawbacks, but such as have been actually allowed."

In view of these provisions of law, remaining still in full force, it is directed that in all future cases, on the oath or affirmation so required being made, and not before, the discount noted on the face of the invoice may be taken and considered in determining the cost of the goods; it being, however, expressly understood that this is not to prevent the appraiser from exercising any part of the authority vested in him by law, in ascertaining, estimating, and appraising the true market value of the merchandise, and the dutiable value of the same; in the performance of which duty, it must be observed, no discount can be allowed that will reduce the goods below their true market value; and that no regard can be had to discounts depending upon conditions to be performed by the consiguees on the arrival of the merchandise.

The foregoing regulation will necessarily supersede any existing rule fixing and determining the rate of discount to be allowed on certain spe-

cified articles.

With every disposition to allow all actual, fair, and reasonable discounts, the department is called upon, by a sense of official duty, to enjoin upon the officers of the customs continued vigilance in guarding the revenue from abuses in this particular. Instances have occurred where an invoice has exhibited a discount greater by  $2\frac{1}{2}$  per cent. than that shown on each of several other invoices of precisely similar goods, from the same foreign house, and imported in the same vessel, at the same time; the said  $2\frac{1}{2}$  per cent. raising the discount claimed just so much higher than the usual rate, as to form an offset to the charge for commissions required to be added in ascertaining the dutiable value of merchandise.

In such cases, or others exhibiting a ground for suspicion of intended fraud, it will become the duty of the collector to consult with the district attorney of the United States, on the propriety of instituting legal proceedings appropriate to the case.

JAMES GUTHRIE, Secretary of the Treasury.

#### Circular.

TREASURY DEPARTMENT, October 11, 1853.

Sin: By the joint resolution of Congress approved 7th January, 1846, it is made "the duty of the Secretary of the Treasury to cause the estimates of appropriations which he is required by law to prepare and submit to Congress to be printed, and copies of the same to be delivered to the House of Representatives in time for distribution at the commencement of each session;" and by the 14th section of the act of the 26th August, 1842, it is required that the estimates shall specify, as nearly as may be convenient, the sources from which such estimates are derived and the calculations upon which they are founded, and in so doing to discriminate between such estimates as are conjectural and such as are founded upon actual information and application of disbursing officers;

and in communicating the several estimates, reference shall be given to the several laws and treaties by which they are authorized, the dates thereof, and the volume, page, and section in which the necessary provisions are contained.

The second section of the act of 17th June, 1814, also contains some explicit directions upon the subject of estimates in the following words:

"That whenever, hereafter, in submitting to Congress the annual estimates from the several Executive departments of the government, it shall be found that the usual items of such estimates vary materially in amount from the appropriation ordinarily asked for the object named, and especially from the appropriation granted for the same objects for the year next preceding; and whenever new items not theretofore usual shall be introduced into such estimates for any year, the estimates shall be accompanied by minute and full explanations from the head of the appropriate department of all such variations and new items, setting forth the reasons and grounds upon which the amounts are required, and the different items added; and whenever any such estimate, whether annual or special, shall ask an appropriation for any new specific expenditure, such as the construction of a fort, the erection of a customhouse or other public building, or the construction of any other public work requiring a plan before the building or work can be properly completed, every such estimate shall be accompanied by a full plan and detailed estimates of the cost of the whole work, and all subsequent estimates for every such work shall give the original estimated cost, the aggregate amount theretofore appropriated for the same, and the amount actually expended thereupon, as well as the amount asked for the current year for which such estimate shall be made; and whenever any subsequent estimate shall ask for an appropriation for any such work beyond the original estimate of the cost, the full reasons for the excess, and the extent of the anticipated excess, shall be also stated."

It has been the practice heretofore for the Register of the Treasury to request the several heads of the other departments, and the heads of bureaus of this department, to furnish the estimates of expenditures expected to be required under their authority, severally and respectively, to enable the Secretary of the Treasury to comply with the above resolution and law; and a few days since he addressed a circular letter to the officers mentioned, for that purpose. I presume, therefore, that the estimates

required are now in the course of preparation.

Upon looking into the subject, I find that for the last few years neither the resolution nor the laws referred to have been complied with in the particulars cited; and from an apprehension that your attention may not otherwise be drawn to the subject, I take the liberty of now asking it, and earnestly requesting you to instruct, both in the matter of the time and form of rendition, the officers charged with making out the estimates dependent upon your authority.

The estimates for the year ending 30th June, 1851, were communicated by the Secretary of the Treasury under date of 16th November,

Ditto, ending 30th June, 1852, under date of 23d November, 1850; Ditto, ending 30th June, 1853, under date of 24th November, 1851; Ditto, ending 30th June, 1854, under date of 7th December, 1852.

The last communication was made on the very day of the meeting of Congress, and of course was a failure to comply with the resolution. Digitized for F

And I conclude the second and third were not in time to be printed, and were failures likewise.

After the estimates are received from the other departments and bureaus at this, some time is required for arranging and consolidating them; and to afford the time, I will be greatly obliged to you if you will trans-

mit your estimates by the first of next month at latest.

Permit me also to call your attention to the very stringent provisions upon the subject of the surplus fund, contained in the 10th section of the act of 31st August, 1852, page 99, and to request that if it is probable that any moneys, within the purview of that section, which were appropriated prior to 1st July, 1852, will be required, and yet cannot be applied prior to the 1st July next, that such moneys may be added to the estimates as proper objects of re-appropriation.

I am, very respectfully, your obedient servant, JAMES GUTHRIE,

Secretary of the Treasury.

[The same as the foregoing was sent to the heads of the Departments of State, War, Navy, Interior, and to the Attorney General; also to the head of each bureau of the Treasury Department.]

General instructions to collectors of the customs, surveyors acting as collectors, and receivers of public moneys arising from sales of the public lands.

TREASURY DEPARTMENT, October 28, 1853.

It is deemed proper by this department to call your attention to the 18th, 19th, and 20th sections of the act entitled "An act to provide for the better organization of the treasury, and for the collection, safekeeping, transfer and dishursement of the public revenue," approved August 6, 1846, which provide that all duties, taxes, sales of public lands, &c., shall be paid in gold and silver coin only, or in treasury notes issued under the authority of the United States, and that all disbursements by officers of the United States shall be made in funds of the same description.

As it is the design of the above-mentioned act to disconnect the government and its revenues from banks altogether, your attention is also called to the 16th section of said act, by which any deposite of the public moneys in such institutions is prohibited under severe penalties.

This department will require a strict compliance with the above provisions of law, and any violation thereof which may be brought to its notice will be reported to the President of the United States, for such action as he may deem right and proper.

JAMES GUTHRIE,

Secretary of the Treasury.

General instructions to collectors and other officers of the customs.

TREASURY DEPARTMENT, November 30, 1853.

The following decisions of this department, made since the 4th March last, and not comprehended in the general instructions heretofore issued,

are communicated for your information and government.

Additional duty of fifty per cent. of the duty to which the goods are liable, levied under the 17th section of the act of 1842, on the appraised value of the same, is incurred when the goods belong to the manufacturer, or are obtained by other means than by purchase; on goods actually purchased the "additional duty" of twenty per cent. on the appraised value is to be charged, as provided in the 8th section of the act of 1846.

This duty is not incurred by a simple excess of quantity over the invoice quantity, but only where the value of the article, as given in the invoice and entry, shall be ten per cent. below the appraised market value. The regular tariff duty is, however, to be assessed on the excess as ascertained.

Allowances for tare, leakage, breakage, and draft.—It has been decided that none of these allowances, specified in the 58th and 59th sections of the act of 2d March, 1799, can be now made, they being considered inapplicable to imports subject to ad valorem duties. Allowances of this character, therefore, under existing laws, can only be made as follows:

The actual tare ascertained in the mode specially pointed out in gen-

eral instructions, dated 25th August, 1853.

The actual leakage or breakage incurred during the voyage of importation—the former to be ascertained by gauge, and the latter by careful examination of the packages or articles, by the proper officer of the customs.

The allowance for draft (draff or dust) being only applicable to articles in bulk, a reasonable estimate of allowance may be made by weighing or measuring a portion of the article so imported.

Animals imported for breed.—The existing laws simply provide for the

exemption from duty of "animals imported for breed."

The declaration of the importer to the fact of their being so imported, made under oath or affirmation, in compliance with the 94th section of the act of 2d March, 1799, is not to be considered conclusive, where circumstances may induce a doubt in the mind of the collector; hence a discretion is vested in that officer, who is to determine any question of doubt by the exercise of a sound judgment in view of all the facts and circumstances of the case.

Appraisement of merchandise.—The act of 3d March, 1851, amendatory of the acts regulating appraisements, declaring that duties must be assessed on the general market value or wholesale price of merchandise, with costs and charges added, at the period of exportation to the United States, any provision of previous laws which would substitute, as the basis of duty, the general market value at any other period, are necessarily repealed, as inconsistent with the latter provision. It follows that the value of merchandise at the date of purchase, as stated in the invoice,

can in no case be legally made the basis of the dutiable value of the importation, unless it be also the general market value or wholesale price

at the period of the exportation to the United States.

In all cases when duties are paid on imports under protest, the appraisers will be careful to retain samples of the merchandise duly designated and marked, so that the quantity and description of the goods may be legally established, should a suit be instituted against the collector. The report, or statement of the appraisement of imports, must in each case be in writing, and signed, not by initials, but in full, so as to constitute legal proof of the appraisement. This report or statement should be written on the invoice or entry, if practicable; and if not, on a separate paper, to be permanently attached to the invoice or entry.

To enable the collector to report additions made on appraisement to the value given in invoices or entries, in compliance with the circulars of the 26th December, 1848, and 9th October, 1850, a record must be faithfully kept of all such additions or advances, in which record must be set forth, in each case, the name of the importer, the merchandise, the vessel in which imported, the value given in the invoice or entry, and the

advance made by the appraisement.

The attention of collectors is called to the form No. 5, of the oath to be administered to merchant appraisers on appeal, and form No. 6, of their report appended to treasury circular of the 25th August last, a rigid

compliance with which must be enforced.

Duties assessed and paid, in conformity with the law, on the appraised value of goods, cannot be refunded on any claim founded exclusively on. the decree of a court, pronounced in a case where the only question before it was of libel against the goods, as being undervalued in the invoice, with intent to defraud the revenue. In the trial of such a case, it is conceived the court has no power or authority over the appraisement so made, and its opinion thereto would be extra-judicial.

Argols, or crude tartar.—The article imported under the designation and commercially known as "argols, or crude tartar," to be admitted to entry at a duty of five per cent. ad valorem, as provided in schedule H of the tariff act; unless reported by the United States appraisers as refined, half refined, or partially refined, in which case it would become liable to the duty of twenty per cent. ad valorem, under

the 3d section of the act, as a non-enumerated article.

Articles for the use of the United States .- By a special act of Congress passed the 29th March, 1848, books, maps, and charts, imported for the use of the library of Congress, are admitted to free entry: "Provided, That if in any case a contract shall have been made with any bookseller, importer, or other person, for books, maps, or charts, in which contract the bookseller, importer, or other person aforesaid, shall have paid the duty, or included the duty in said contract, in such case the duty shall not be remitted."

The "Act to supply deficiencies," &c., passed the 26th January, 1849, in providing for the free admission of all articles imported for the use of the United States, contains no similar proviso; but a like precaution being deemed necessary and proper under the last named law, the collector is directed, in cases of any importations alleged to be for the use of the United States, to await the instructions from this department, which, on its being advised by the proper officer of government, will

be transmitted, for the delivery of the articles, free of duty or charges, to

the agent duly authorized to receive them.

Articles the growth, produce, or manufacture of the United States, exported to a foreign country, and brought back to the United States in the same condition as when exported, are exempted from duty under schedule I of the existing tariff. In addition to the proof of identity, specified in the treasury circular of 31st December, 1847, it is directed that, before admitting goods, wares, or merchandise, so brought back, to free entry, the collector shall require the production of certified statements from the custom-houses in the United States and abroad, through which the articles in question had passed, containing particular descriptions of said goods, wares, or merchandise.

Articles imported for the use of certain associations and seminaries of learning, mentioned in the civil and diplomatic appropriation act of 12th August, 1848, are to be admitted to free entry only when of the description and character therein designated. Articles for the use of churches, it has been decided, are not entitled to exemption from duty under the

provisions of this act.

Articles of taste entitled to free entry, as provided in schedule I of the existing tariff act, are limited to paintings and statuary, imported in good

faith as objects of taste and not merchandise.

Articles imported for the use of foreign legations in the United States.—The exemption from duty accorded, by comity, to all articles intended for the personal or family use of foreign ambassadors, ministers, or charges d'affaires to the United States, is not to be extended to the importations of secretaries of legation, attachés, or consuls.

Articles of ministers or charges d'affaires of the United States to foreign governments, returning home, and having belonged to them while abroad, to be entitled to free entry, if brought with them, or when

shipped to the United States on their account.

Articles or packages lost.—It has been decided by the department that no allowance or abatement of duties can be made, in the estimate of duties, for any missing article or package entered on the invoice or bill of lading, unless satisfactory proof be adduced that it was not shipped; or, being shipped, that it was lost or destroyed during the voyage of importation, and before the vessel arrived in a collection district of the United States. After such arrival, no allowance can be made for loss or injury sustained in the transportation of goods from one district to another.

If articles or packages are lost while in the custody of the United States appraisers, the owner may be entitled to remuneration in the actual cost of the same, with return of any duties he may have paid on the goods; but no such allowance can be made for loss or injury sustained with regard to goods under bond in the public warehouse.

Books.—Editions, published abroad, of works of American citizens, when imported into the United States, do not come within the exemp-

tion from duty provided by law, as personal effects, or otherwise.

Editions of foreign reviews and magazines, intended to take the place of the reprints of the books in the United States, cannot, whatever be the contract rate at which they are furnished to the importers, be taken by the United States appraisers, in estimating the duties, at a lower value

ation than the wholesale price of similar books in the general foreign market, at the period of the exportation to the United States.

Canal boats.—The exemption of canal boats from the payment of fees and hospital money, as provided by the act of 20th July, 1846, cannot extend to boats or barges exceeding fifty tons, although without masts or steam-power within themselves, when the usual practice of such boats or barges is to come out of the canals and trade, by the aid of steamboats and propellers, on natural navigable waters, from district to district—such boats or barges thus becoming liable to the regular payment of hospital money and fees, besides being by law required to be registered, licensed, or enrolled and licensed, and governed by the several provisions of the laws regulating the coasting trade.

Cush's or hogsheads of American manufacture, exported from the United States empty, and returned filled with molasses, to be included among the dutiable charges—not being, when so imported, "in the same condition" as when exported, as required by the provisions of

schedule I of the existing tariff act.

Chains, for mooring vessels, of foreign manufacture, imported for the purpose of being left in the United States as mooring-chains for a line of foreign steamer packets, become liable, on being landed, to the charge of duty provided in the existing tariff act, as manufactures of iron.

Charges for transportation or freight.—As a general rule, when goods are transported from the place of their production or manufacture to another port, and thence transhipped for the United States, the cost of transportation from the first to the second port, together with the cost of transhipment and other shipping expenses at such second shipping port, are to be added to the value of the goods at their place of production or manufacture, at the time of exportation from the last port of shipment to the United States, in making up the dutiable value of the same—as in the shipment of wines from Malaga to Valparaiso, and thence to San Francisco in California; or of iron or coal from Cardiff or Newport, in Wales, to Liverpool; or from Troone or Glasgow to Londonderry, and thence, or from Liverpool, transhipped direct for San Francisco.

Exceptions in the application of this rule are, however, in some instances to be made, from the peculiar circumstances of the case; as, for example, where goods are shipped in good faith from any shipping port in Europe, their destination declared to be for any port of entry of the United States on the coast of the Pacific, to be transported across the Isthmus of Panama. In such cases neither the freight from the port of departure in Europe to the isthmus, nor the charge of transit over the same, nor the final freight or transportation from Panama to their destined port in the United States on the Pacific, is to be added, in their appraisement in estimating the dutiable value of the goods. appraisement must, however, exhibit the true market value or wholesale price of the goods in the principal markets of the country whence originally shipped, on the destination before mentioned, at the period of exportation to the United States. In like manner, goods shipped at Colan, or any other port of South America on the coast of the Pacific, destined for a port of the United States on the Atlantic, via the Isthmus of Panama, are exempt from the payment of duty on any of the charges of freight or transportation.

Chicory root, not being one of the several roots specifically mentioned

in the existing tariff act as liable to various rates of duty, becomes entitled to free entry, under schedule I, as necessarily included in the

provision regarding "roots not otherwise provided for."

Coal measures.—The measures to be used for ascertaining the quantity of imported coal will be tubs containing, when even-full, three heaped bushels, equivalent to three and three-quarters struck bushels. They will be constructed of the following dimensions, to wit: Interior dimensions.—141 inches depth; 25, inches breadth of bottom; 27, inches breadth of top.

In the measurement of coal, these tubs will be filled even-full, and

will be estimated as containing three bushels each.

Cocoa wine.—If, on examination, it appears to the satisfaction of the collector that the article so named is not imported to be used as a beverage, like the wines of commerce, but is exclusively used medicinally, it is to be considered as entitled to duty as a medicinal preparation, at a duty of 30 per cent. ad valorem.

Commissions at the usual rates, but not less than 21 per cent., as regulated by the law, and treasury instructions dated 25th August last, are chargeable on the cost of the goods, with addition of the expenses of packing, baling and boxing, transportation to the place of exportation to the United States, and of transhipment and other shipping charges at

such port.

Concentrated molasses, or melado.—The article imported under such designation, being brought by process of manufacture to the point of crystalization, is to be considered an inferior sugar, and is to be so taken in the appraisement, ascertainment and estimate of the foreign general market value of the article.

Concentrated lemon juice.—The juice having gone through a process of preparation for the purpose of being used in calico printing, is taken out of the classification made in schedule G of the existing tariff act, as "lemon juice," and becomes liable to the duty of 20 per cent.

under the third section of the act, as a non-enumerated article.

\*Copper in plates, Si inches in length, 63 inches in width, and f of an inch in thickness, not being considered a "manufacture of copper," as provided for in schedule C, nor "copper in pigs or bars," as provided far in schedule H, necessarily becomes liable to the duty of 20 per cent., as a non-enumerated article, under the provisions of the third section of the tariff act.

Crochet needles not considered as comprehended in the class of needles specified in schedule E of the tariff act, but liable to duty as "manufactures" according to the material of which they are composed.

Crucibles of platina, specially imported for the use of a scientific school, to be exempt from the payment of duty, under the provisions of the first section of the civil and diplomatic appropriation act of 12th

August, 1848.

Currencies.—The list of foreign currencies, the value of which has been fixed by the laws of the United States, has been given in the general instructions from the department dated the 25th August, 1853. The department having received satisfactory information of the depreciation of the currencies of Austria, Chili, Bolivia, Pern, Porto Rico, and Nova Scotia, collectors are advised that, on invoices of merchandise made out in such depreciated currencies, with certificates of United States consuls annexed, being presented, they may be received by the collectors; subject, however, to the restrictions contained in circular instructions of the department dated the 19th September, 1851.

Deficiencies.—Under the decisions of the Supreme Court of the United States, allowance is to be made, in the assessment of the duties, for deficiencies in importations of merchandise, the duty to be assessed only on the value of the quantity received of sugars, molasses, liquors, oils, &c., arising from actual drainage, leaking or damage; but no allowance can be made for the shrinking or drying of articles during the voyage of importation, where the full quantity shipped of such articles as per invoice has been landed; and no further allowance under the fifty-ninth section of the general collection act of 2d March, 1799.

Discounts.—In conformity with the regulations established in general instructions dated 25th August and 6th October, 1853, the usual discount may be allowed, in the estimate of duties, if claimed on the invoice of goods shipped by the manufacturer, to be sold on his account, provided the oaths or affirmations are made by the manufacturer and consignee, as prescribed by existing laws; and provided further, that the deduction of such discount do not reduce the invoice below the general market value of the goods at the time of shipment to the United States.

Discriminating duties.—It appearing from a communication from the chargé d'affaires of Spain, dated 23d August, 1853, as well as from the certificate of the American consul at Teneriffe, dated 19th April, 1853, that by a royal Spanish decree, dated 11th July, 1852, and proclaimed in the said island on the 10th October, 1852, American vessels and their cargoes arriving in said island after the said 10th October, 1852, were placed on the same footing with the vessels of Spain and their cargoes, no discriminating duty is to be levied on Spanish vessels or their cargoes from that island arriving in ports of the United States, provided that on each such arrival there be filed with the collector of the port in which the vessel arrives, a certificate of the American consul at said island, showing that the said Spanish decree remains in full force.

Emigrants arriving in the United States to be entitled to the free entry of their household and personal effects, together with their tools, implements and instruments of trade or profession, comprehending any apparents or the control of the cont

ratus or machine worked by manual power exclusively.

Engravings or plates, bound or unbound, are entitled to entry at a duty of ten per cent., as provided in schedule G; but when in frames, the frame is liable to a further duty as a manufactured article, according

to the materials composing it.

Error in the assessment of duties.—Where the correction of such errors is claimed without proof of protest, as required in all other claims for return of excess of duty paid, such claim cannot be entertained and considered by the department unless it appear by the certified statement of the collector that it has been presented to the collector within one year from the time of payment of the duties alleged to have been exacted in error.

Excess in weight, over the invoice quantity, when arising from the damaged condition of the article, as in the case of indigo partially satu-

rated with sea-water, is not considered liable to duty, the assessment, in

such cases, being properly limited to the invoice quantity.

Fubrics composed of silk and metal, or silk, cotton, and metal, are entitled to entry at a duty of twenty-five per cent. ad valorem, as provided in schedule D of the tariff act on manufactures composed in part of silk; unless the metal be the component material of chief value, in which case the fabric would be liable to the duty of thirty per cent. ad valorem, under special provision in regard to that component material in schedule C. It the fabric be composed of silk, paper, and metal, although metal be not the component material of chief value, the fabric would be still liable to the duty of thirty per cent.; any manufacture composed in part of paper being subject to that rate of duty, by the provisions of schedule C of the existing tariff act.

Fees for weighing, gauging, or measuring imports, under the provision in the 4th section of the tariff act of 1846, it has been decided by courts of the United States, can be legally exacted of the importer only in cases where the invoice or entry shall not contain the weight or quantity or measure of the merchandise weighed, gauged, or measured. This decision of the courts is acquiesced in by this department; but whenever the weighing, gauging, or measuring shall disclose a difference between the actual weight or quantity and that specified in the invoice or entry, affording a well grounded presumption of fraud, the collector will advise with the United States district attorney on the case, and will be governed by his opinion as to the propriety of instituting legal proceedings for enforcing the penalty provided by law.

Figures, of porcelain or other material, of an obscene or indecent character, are liable to seizure and to be libelled under the provisions of

28th section of the tariff act of 30th August, 1842.

Fish, caught in the lakes near the Canada shore or islands, by American fishermen, and brought into ports of the United States fresh or put up in American barrels, with American salt, are exempt from duty under the provisions of schedule I of the existing tariff act: Provided, They are so brought into the United States in an American vessel, duly licensed for the fisheries; otherwise they become liable to a duty of twenty per cent. ad valorem, as provided in schedule E of the said act.

Glass.—No decision of this department has recognised as "window glass," entitled to entry at a duty of twenty per cent. and valorem, any other than the "broad, crown, or cylinder glass," specified in schedule E. Glass ground on one side must be taken as a "manufacture of glass," provided for in schedule C; and if "colored or stained," it is found in the same schedule, charged with a duty of thirty per cent. ad valorem.

Glass jars, specially imported for a school or college, are exempt from the payment of duty under the provision of the act of 12th August, 1848.

Grain, brought from Canada into the United States, there ground into flour, and thence exported back to Canada, is not entitled thereby to a drawback of the duties paid on importation, the article not being in the same condition as when imported into the United States.

Horses, purchased by officers of the army of the United States, or others, on their own account, and not as authorized agents of the government, and brought into the United States from the adjacent foreign pos-

sessions, are not exempted from the payment of duty by any provision of law.

Indians.—Under the provisions of the 105th section of the general collection act of 2d March, 1799, peltries may be brought into the United States by Indians, from the adjacent foreign possessions; and also the goods and effects bona fide their property: Provided the said goods and effects are moderate in quantity and value, and usual among Indians. The officers of the customs have been enjoined, in general instructions dated 22d September, 1853, to exercise vigilance in preventing or detecting the illegal introduction of foreign dutiable merchandise into the United States, by means of the agency of Indians; and it has been decided by this department that such articles as shingle and stave bolts, cord-wood, salted fish in barrels, cattle, horses, and agricultural products, when brought into the United States by Indians from the neighboring foreign possessions, in quantities, for sale or on contract, as merchandise, are not entitled to entry free of duty, under the law.

Indian corn, or maize.—This article is not admissible, without the payment of duty, as seeds for agricultural purposes, being specified in schedule E. of the tariff act as charged with a duty of twenty per cent.

ad valorem.

India rubber, when in a liquid state, to be admitted as unmanufactured, at a duty of ten per cent., as provided in schedule G of the ex-

isting tariff act.

Invoices.—Shipments of merchandise by several vessels cannot be embraced in a single invoice, and be covered by a single consular certificate. The merchandise shipped by each vessel must be embraced in a single invoice, duly verified, if on foreign account, by oath of the owner, and authenticated by consular certificate.

Foreign merchandise, destined for a port of the United States by way of the river St. Lawrence, is not unfrequently transhipped from the importing vessel to one or more vessels of light draught, and on arrival at the port of destination is found to be unaccompanied by the documents

entitling it to entry.

Where all the articles embraced in the invoice are transhipped on the St. Lawrence to a single vessel, the proper invoice must be presented on entry, together with a copy of the clearance from the foreign port of exportation of the vessel from which the transhipment took place, certified to be a true copy by the collector or other chief revenue officer of the Canadian port at which the vessel was entered. When the articles embraced in a single invoice are transhipped on the St. Lawrence to several vessels, they will be admitted to entry on the production of the proper invoice, and a statement under oath of the person or agent superintending the transhipment, describing the articles by numbers, marks, &c., transhipped to each vessel, and stating in what invoice they are embraced, together with the certified copy of the clearance of the importing vessel, as above required.

Invoice and manifest.—The attention of collectors of the customs in districts adjacent to foreign territory is called to those provisions of general instructions No. 7, which relate to the manifest prescribed in the act of March 2, 1821, entitled "An act further to regulate the entry of merchandise imported into the United States from any adjacent territory,"

and the invoice required by the act of March 1, 1823, supplementary to and amendatory of the general collection law of 2d March, 1799.

Whenever the importer presents an invoice or manifest of the description referred to in general instructions No. 7, duly supported by oath, he may be permitted as well to enter for warehousing as consumption; and the warehouse regulations heretofore prescribed by the department are modified to that extent. And if the goods are withdrawn for transportation under bond to another district, the triplicate copy of the entry, with the duty estimated thereon, required by the regulations to be forwarded to the collector of the district to which the goods are destined, will be accompanied by a certified copy of the invoice or manifest, (as the one or the other has been presented on the original warehouse entry,) with the appraisers' report thereon.

Iron ore, imported into the United States from the adjacent British possessions, or elsewhere, to be charged, as provided in schedule C of the existing tariff act, with a duty of thirty per cents ad valorom.

Linseed oil.—It being represented to the department that diversity of practice prevails at some of the ports, in the mode of ascertaining the quantity imported of this article, collectors are instructed that, as well in order to the assessment of duties, as for statistical purposes, such quantity must uniformly be ascertained by gauge.

Logs of pine and other wood, sent from the adjacent foreign possessions, to be sawed into lumber in the United States, and thence exported back to said possessions, to be liable to the charge of duty on importation, which cannot be returned as drawback on exportation, the article not being in the same condition as when imported.

Machines, for making paper, or other uses of manufacture, cannot be admitted to free entry under the law, as models of machinery, if, as im-

ported, they can be "fitted for use."

Marble blocks, imported for the cemetery of a benevolent society, or for any other purpose than the use of the United States, cannot be admitted without the payment of the duty provided by law.

Medallion casts, in plaster, from antique gems, are not considered entitled to free entry, either as "objects of taste" or as "medals or other antiquities," and become liable, on importation, to the duty of twenty

per cent. ad valorem as non-enumerated articles.

Old type, brought from the adjacent British possessions, and represented as originally of American manufacture, and as being imported for the purpose of being re-cast and returned to the said possessions, are chargeable with duty on their importation, as specifically provided in schedule E of the existing tariff act; and no drawback of duties can be allowed on their exportation as new type, the condition of the article being essentially changed.

Paper clippings and shavings, intended for the purpose of being ground into a pulp for making paper. This article is not specified in the law; but bearing a similitude, particularly in the use to which it may be applied, to "rags of whatever material," provided for in schedule H of the tariff act of 1816, becomes, under the operation of the 2d section of the act of 30th August, 1812, entitled to entry at a duty of five per cent. ad valorem.

Picul.—On importations of hemp from Manilla, the picul to be taken at 135 pounds.

Platina .- It being satisfactorily ascertained that this article is never imported into the United States in an absolutely crude state, it has been decided by the department that the exemption from duty, provided in schedule I of the tariff act of 1846, of platina unmanufactured, extends to and comprehends platina imported either in ingots or in the form of sheets, used in the manufacture of retorts and other vessels, or in the form of wire used by dentists in the manufacture of pivots for artificial teeth, or generally, to the substance platina, in any shape or form not constituting an article suitable for use without further manufacture.

Protests -In order to the allowance of a return of excess of duties claimed under the provisions of existing laws, and decisions of courts of the United States, authorizing the return of duties paid, the certified statements transmitted by the collectors of the customs must show that the protest prescribed by such laws or decisions of courts, and required by this department, was duly made at or before the time of the payment of the duties, in each several importation mentioned in the said statement; it being decided by this department, in conformity with the judicial decisions, that a general protest, made on any one importation, cannot be taken as extending and applying to future importations of similar

Samples of goods.—The class of articles under this title, considered by this department as admissible free of duty, must be only such as strips or pieces of silk, cotton, or other fabric; small quantities of raw material, and generally articles of any description having little or no intrinsic value as merchandise; in regard to which the proper officers of the customs, in their examinations, are to exercise a reasonable discretion; it being understood that articles of a certain value, although imported under the designation of samples, such as pieces of carpeting, which, from their size and form, are suitable for and sold as rugs or bed sides,

&c., cannot be exempted from the payment of duty.

Shoe, slipper, boot, bootee, or button stuffs, of mohair cloth, silk twist, or any other fabric of cloth suitable for the manufacture of those articles exclusively, are entitled, under the provision in schedule H of the existing tariff act, to entry at a duty of five per cent. ad valorem. admitted, however, the importation must be in strips or pieces, or so punctured or worked, or stamped in figures colored or otherwise, as to render them unsuitable for other purposes than the manufacture of the articles enumerated in the law. Plain cloths, although cut or punctured at the edges, but leaving uninjured material sufficient and suitable for other uses, cannot be so admitted; and manufactures of leather and silk, imported in the shape of uppers of shoes or slippers, do not come within the provision of law referred to, but are liable to the duty of thirty per cent., under the provisions of schedule C of the existing tariff act.

Spars, or other articles of wood, floated across a river or lake from an adjacent foreign possession into the United States, become liable to the appropriate rate of duty, according to their distinctive character, as provided by law, and specially referred to in general instructions No. 11,

dated 22d September, 1853.

Statuary, when imported as objects of taste, is entitled to free entry. The term statuary, as used in the law, is understood to be confined in its application to "figures representing living or deceased creatures, of whatever species, real or imaginary, in full relievo, insulated on every

part," and which may be formed of marble, plaster, bronze, or other material appropriate to the composition of an "object of taste." Sculptures of figures, in mezzo relievo, cannot therefore, consistently with the construction of the law given by this department, be admitted to free entry.

Stones for building, to be liable, under the provisions of schedule G

of the existing tariff act, to a duty of ten per cent. ad valorem.

Swedish "German steel."—This article, being known to the trade as "German steel," although coming from countries other than Germany, on the principle established by courts of the United States, is to be admitted to entry as "German steel," at a duty of fifteen per cent. ad valorem, as provided in schedule F of the tariff act.

Venitian red, chargeable as an ochre with the duty of thirty per cent.

ad valorem, as provided in schedule C of the tariff act.

Warehousing and re-warehousing.—As duties payable on merchandise transported in bond and re-warehoused under the warehousing law and regulations, are collected according to the ascertainment and estimate made at the port of original entry and warehousing, collectors and other officers of the customs are instructed to cause the utmost care to be used in all the acts necessary in determining the exact quantity, quality, and dutiable value, such as weighing, gauging, measuring and appraising, in order to ascertain the precise amount of duties chargeable on the merchandise imported.

Witnesses.—Where the United States district attorney requires the attendance of witnesses on behalf of the collector of the customs in revenue cases, the latter will advance the necessary fees, in order that

per and legal service may be made.

JAMES GUTHRIE,

Sccretary of the Treasury.
